EXECUTIVE SUMMARY

INTRODUCTION

The purpose of this filing is to grandfather the existing BellSouth Primary Rate ISDN (PRI) optional feature, Incoming Call Extension - Different Rate Center (ICE-DRC), and introduce a new ICE-DRC feature under an improved provisioning process. PRI is located in Section A42 of the General Subscriber Services Tariff.

DESCRIPTION OF PRESENT TARIFF

The existing PRI ICE-DRC optional feature enables customers who have Alternate Network Serving Arrangement (ANSA) to retain their telephone numbers. This version of ICE-DRC service is based on an inefficient, labor-intensive provisioning process that slows the service delivery process.

DESCRIPTION OF PROPOSED TARIFF

This filing introduces an improved ICE-DRC arrangement that is based on a more efficient provisioning process resulting in a shorter service delivery timeframe and a better customer experience.

CUSTOMER EFFECTS

This filing does not impact existing customers. The existing ICE-DRC rate structure is being moved to Section A142 - Obsolete Service Offerings, which allows existing customers to continue service under the existing ICE-DRC arrangement.

With the effective date of this filing, new customers will order the ICE-DRC optional feature based on the improved provisioning process.

REVENUE IMPACT

The revenue associated with the new process will cover its cost.
