- Priority Call

A113. OBSOLETE MISCELLANEOUS SERVICE ARRANGEMENTS

A113.1.2 Verizon Calling Services (continued)

(T)

Obsolete. The features listed below are grandfathered within the Custom Calling Local Area Signaling Service and will be continued for existing customers only. No moves, additions or changes may be made to these existing features.

.4 Custom Calling Local Area Signaling Service

a. Description of select features grandfathered within Custom Calling Local Area Signaling Service.

- (1.) Priority Call allows a customer to program up to twelve (12) telephone numbers of selected callers enabling the customer to distinguish certain incoming calls from all others by a distinctive ring tone. If a customer also subscribes to Call Waiting, calls from the selected numbers will be distinguished by a special Call Waiting tone.
- (2.) Call Block allows a customer to block incoming calls from a maximum of 12 telephone numbers. The customer also can block incoming calls placed from the last calling number even if the number is unknown to the customer. Blocked calls are routed to a recorded announcement which specifies that the called party is not accepting calls.

Customers subscribing to this service may be able to automatically reject all calls that have been marked "P", "PRIVATE", "PRIVATE NUMBER", or such similar indicator by the person calling. It is not necessary to subscribe to Caller ID-Number Only to use this Call Block feature. With this feature activated (Anonymous Call Block), the called party's telephone will not ring. The person calling, whose identification is blocked, will receive a message to hang up and call back with his number unblocked.

- (3.) Do Not Disturb allows a customer to select up to 12 customer telephone numbers from which calls are to be received. All other calls are intercepted and routed to a recorded announcement that informs the caller the customer is not accepting calls. Calls from numbers outside the specified exchanges will ring normally.
- (4.) Caller ID-Number Only is an arrangement which permits a customer with local Exchange Service other than foreign central office service to receive the calling telephone number for calls placed to the customer. The calling telephone number will be forwarded from the terminating central office to compatible customer provided display equipment associated with a customer's local Exchange Service. The calling telephone number will be delivered during the first silent interval of ringing. If the calling telephone number is not available for forwarding to the called party, the customer's display device will record the time of day and date, and show "OUT OF AREA" and in some cases, dashes (--- ----), for the non-available numbers. The calling telephone number is unavailable from calls made from non-SS7 offices, some large PABX systems, and from some cellular radio calls, and currently from interexchange carrier calls. Compatible customer provided display equipment is required for this service.

Any customer subscribing to Caller ID-Number Only will be responsible for the provision of a display device which will be located on the customer's premises. The installation, repair, and technical capability of that equipment to function in conjunction with the feature specified herein will be the responsibility of the customer. The Company assumes no liability and will be held harmless for any incompatibility of this equipment to perform satisfactorily with the network features described herein.

Telephone numbers are not available on operator handled or credit card calls.

Telephone numbers transmitted via Caller ID-Number Only are intended solely for the use of the Caller ID-Number Only subscriber. Resale of this information is prohibited by this Tariff.
