

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION

 In the Matter of : DOCKET NO. 950001-EI
 :
 Fuel and Purchased Power Cost :
 Recovery Clause with Generation :
 Performance Incentive Factor :

FIRST DAY - MORNING SESSION

VOLUME 1

Pages 1 through 180

PROCEEDINGS:

HEARING

BEFORE:

COMMISSIONER J. TERRY DEASON
 COMMISSIONER JULIA L. JOHNSON
 COMMISSIONER DIANE K. KIESLING

DATE:

Wednesday, March 8, 1995

TIME:

Commenced at 10:00 a.m

PLACE:

Fletcher Building
 FPSC Hearing Room 106
 101 East Gaines Street
 Tallahassee, Florida

REPORTED BY:

JOY KELLY, CSR, RPR
 Chief, Bureau of Reporting
 SYDNEY C. SILVA, CSR, RPR
 ROWENA NASH HACKNEY
 Official Commission Reporters

DOCUMENT NUMBER-DATE

02702 MAR 13 95

FPSC-RECORDS/REPORTING

FLORIDA PUBLIC SERVICE COMMISSION

1 APPEARANCES:

2

3 **JAMES A. MCGEE**, Post Office Box 14042, St.
4 Petersburg, Florida 33733, Telephone No. (813) 866-5098,
5 appearing on behalf of **Florida Power Corporation**.

6 **MATTHEW M. CHILDS, P.A.**, Steel, Hector &
7 Davis, 215 South Monroe Street, Suite 601, Tallahassee,
8 Florida 32301, Telephone No. (904) 224-7595, appearing
9 on behalf of **Florida Power and Light Company**.

10 **JAMES D. BEASLEY**, Macfarlane, Ausley, Ferguson
11 and McMullen, P.O. Box 392, Tallahassee, Florida 33302,
12 Telephone No. (904) 224-9115, appearing on behalf of
13 **Tampa Electric Company**.

14 **MARIAN B. RUSH**, Salem, Saxon & Nielsen, P.C.,
15 Suite 3200, One Barnett Plaza, 101 East Kennedy
16 Boulevard, P. O. Box 3399, Tampa, Florida 33601,
17 Telephone No. (813) 224-9000, and

18 **MICHAEL E. KAUFMANN**, Brickfield, Burchette &
19 Ritts, P.C., 1025 Thomas Jefferson Street, N.W., Eighth
20 Floor - West Tower, Washington, D.C., 20005, Telephone
21 No. (904) 342-0800, appearing on behalf of **Florida Steel**
22 **Corporation**.

23

24

25

1 APPEARANCES CONTINUED:
2

3 **JOHN McWHIRTER, McWhirter, Reeves, McGlothlin,**
4 Davidson and Bakas, 315 South Calhoun Street, Suite 716,
5 Tallahassee, Florida 32301, Telephone No. (904)
6 222-2525, appearing on behalf of **Florida Industrial**
7 **Power Users Group.**

8 **JOHN ROGER HOWE, Office of Public Counsel, 111**
9 West Madison Street, Room 812, Tallahassee, Florida
10 32399-1400, Telephone No. (904) 488-9330, appearing on
11 behalf of the **Citizens of the State of Florida.**

12 **MARTHA CARTER BROWN, Florida Public Service**
13 Commission, Division of Legal Services, 101 East Gaines
14 Street, Tallahassee, Florida 32399-0863, Telephone No.
15 (904) 487-2740, appearing on behalf of the **Commission**
16 **Staff.**

17 **PRENTICE P. PRUITT, Florida Public Service**
18 Commission, Office of General Counsel, 101 East Gaines
19 Street, Tallahassee, Florida 32399-0862, Telephone No.
20 (904) 488-7463, **Counsel to the Commissioners.**

P R O C E E D I N G S

(Hearing convened at 10:00 a.m.)

COMMISSIONER DEASON: Call the hearing to order. We'll begin by having the notice read.

MS. BROWN: By notice issued February 10th, 1995, this time and place was set for a hearing in the following dockets: Docket 950001-EI, fuel and purchased power cost recovery clause; Docket 950002-EC, energy conservation cost recovery cause; Docket 950003-GU, purchased gas cost recovery clause; and Docket 950007-EI, environmental cost recovery clause.

The purpose of the hearing is described in the notice.

COMMISSIONER DEASON: We'll take appearances.

MR. CHILDS: Commissioners, my name is Matthew Childs of the firm of Steel, Hector and Davis. I'm appearing on behalf of Florida Power and Light Company in the 01 and 07 dockets.

MR. BEASLEY: Commissioners, I'm James D. Beasley of the law firm of Macfarlane, Ausley, Ferguson and McMullen, representing Tampa Electric Company in the 01 and 02 dockets.

MR. KAUFMANN: Commissioners, my name is Michael Kaufmann, of the firm of Brickfield, Burchette and Ritts, out of Washington, D.C., representing Florida

1 Steel in the 01 docket.

2 MS. RUSH: Commissioners, my name is Marian
3 Rush, I'm with the firm of Salem, Saxon and Neilsen.
4 I'm here with Mr. Kaufmann representing Florida Steel in
5 the 01 docket.

6 MR. HOWE: Commissioners, I'm Roger Howe with
7 the Office of Public Counsel, appearing on behalf of the
8 Citizens of the state of Florida in the 01, 02, 03 and
9 07 dockets.

10 MR. McWHIRTER: Mr. Chairman, my name is John
11 McWhirter of the firm of McWhirter Reeves, appearing on
12 behalf of the Florida Industrial Power Users Group in
13 the 1, 2, 3 and 7 dockets.

14 MS. BROWN: Martha Carter Brown and Vicki D.
15 Johnson representing the Florida Public Service
16 Commission Staff in the 01 and 07.

17 MR. PRUITT: I'm Prentice Pruitt, counselor to
18 the Commissioners.

19 COMMISSIONER DEASON: Okay. Very well.

20 MS. BROWN: Commissioner, may I mention
21 something before we get started?

22 COMMISSIONER DEASON: Well, I have something
23 to do with the appearances, something to say, and then
24 we can get on --

25 MS. BROWN: Something to do with appearances?

1 COMMISSIONER DEASON: Yes. Yesterday, Jeffry
2 Stone -- is that what you wanted to just mention? He
3 called my office and spoke with Charles. Apparently, he
4 has no issues or Gulf Power has no issues, and it was
5 his desire to be excused from today's proceedings and I
6 granted him that. And he did obviously participate in
7 the prehearing process and went through that; and since
8 there are no contested issues, there would be no need
9 for him to appear here today.

10 MS. BROWN: Yes. I had one other matter on
11 appearances, Commissioner Deason.

12 Ms. Rush is sponsoring Mr. Kaufmann in this
13 proceeding. She filed notice of sponsorship this
14 morning.

15 COMMISSIONER DEASON: Yes. I reviewed that,
16 that filing; and without objection, that sponsorship
17 will be recognized and we'd welcome Mr. Kaufmann to
18 participate with us today.

19 MR. KAUFMANN: Thank you.

20 * * * * *

21 MS. BROWN: Commissioner, we're ready to
22 proceed with 01 if you are.

23 COMMISSIONER DEASON: Yes. We will proceed
24 into the 01 docket at this time.

25 MS. BROWN: Commissioner, I have a couple of

1 minor corrections to the Prehearing Order that was
2 issued yesterday.

3 Let me first -- with respect to the witnesses,
4 let me first mention that Mr. Birkett from Florida Power
5 and Light and Mr. Silva filed rebuttal testimony in the
6 case, and the Prehearing Order does not reflect that.
7 Mr. Childs has proposed that they give their direct
8 testimony and then give their rebuttal testimony at the
9 appropriate time.

10 COMMISSIONER DEASON: And that was for
11 witnesses Birkett and Silva?

12 MS. BROWN: Yes.

13 We have four outstanding company-specific
14 issues to deal with. We have several company-specific
15 issues that have been stipulated and I need to mention
16 one of them.

17 Jim, what issue is that that I need to add?

18 Commissioner, if you would turn to Page 21,
19 Issue 23B, when we were putting this final Prehearing
20 Order together, the last sentence of the position, of
21 the stipulated position in that issue was inadvertently
22 dropped, and I would like to read that into the record
23 now.

24 It is a separate paragraph, and it begins,
25 "All of the revenues that result from interchange sales

1 other than the firm Schedule D sales should continue to
2 appear as credits in the appropriate adjustment clauses.
3 The Company should notice the Commission's Division of
4 Electric and Gas via a certified letter if (when)
5 additional Schedule D sales are made."

6 That's part of the position that Staff and
7 Tampa Electric Company reached agreement upon, and it
8 just got left out; the computer ate it.

9 There is one other minor correction that I
10 need to make, and that is with Issue 13.

11 Issue 13 is a stipulated Issue as well, and
12 the Prehearing Order does not reflect that.

13 COMMISSIONER DEASON: So then the only issues
14 remaining are 10A, B, C.

15 MS. BROWN: 23A.

16 COMMISSIONER DEASON: And 23A.

17 MS. BROWN: Yes. All of the other issues have
18 been stipulated. There are generic issues that have
19 been stipulated with the caveat that the number is
20 subject to adjustment for certain companies pending
21 resolution of the company-specific issues in the fallout
22 issues. It's just a calculation that we'll make after
23 the Commission makes its decision.

24 COMMISSIONER DEASON: Yes. Very well.

25 MS. BROWN: There is nothing further

1 preliminarily, and we're ready to proceed with the
2 issues in dispute.

3 COMMISSIONER DEASON: Well, would it be more
4 expeditious if we went ahead and identified all of those
5 witnesses whose testimony will be inserted, and their
6 exhibits and go ahead and have that portion of the
7 record completed, and then we can move into the live
8 testimony of the other witnesses.

9 MS. BROWN: Yes. Yes, you're right,
10 Commissioner, it would be.

11 COMMISSIONER DEASON: Okay.

12 MS. BROWN: Starting on Page 5 of the
13 Prehearing Order the witnesses whose testimony has been
14 stipulated to be inserted into the record as though
15 read, all appear with an asterisk next to their names.
16 And likewise the exhibits they have sponsored have been
17 identified with an asterisk next to their name.

18 COMMISSIONER DEASON: First of all, let's take
19 care of the testimony.

20 I'm going to ask all of the parties to look at
21 the Prehearing Order and make sure that those witnesses
22 that do have a asterisk by their names, that it is
23 appropriate for their testimony to be inserted into the
24 record and cross examination be waived.

25 I take it now you're moving that all of those

1 witnesses who are so designated, that at this point
2 their testimony be inserted into the record.

3 MS. BROWN: Yes, Commissioner.

4 COMMISSIONER DEASON: Without objection,
5 showing no objection, show that the testimony for those
6 witnesses so designated will have their testimony
7 inserted into the record.

8 Now let's proceed to the exhibits for those
9 particular witnesses. And what page is that on?

10 MS. BROWN: That's a Pages 22 through 24, or
11 25 rather.

12 MS. BROWN: Yes, Commissioner.

13 COMMISSIONER DEASON: First of all what I'm
14 going to do, for ease of administration, I'm going to
15 number for identification purposes all exhibits which
16 have been identified in the Prehearing Order, I'm going
17 to number those consecutively as Exhibits 1 through 38.
18 All of those exhibits will be identified in order as
19 they appear in the Prehearing Order, and they will be
20 identified as Exhibits 1 through 38.

21 Now, I take it you have designated those
22 exhibits with an asterisk that may be admitted at this
23 point, and there would be no cross examination on those
24 exhibits.

25 MS. BROWN: That's correct.

1 COMMISSIONER DEASON: Okay. Here again I'm
2 going to ask all parties to review that quickly and make
3 sure that is the case. And I take it then you are
4 moving those so designated exhibits into the record at
5 this time.

6 MS. BROWN: Yes, Commissioner.

7 COMMISSIONER DEASON: Without objection, show
8 those exhibits so designated being admitted. And I
9 believe that would leave Exhibits 11, 12, 13 that would
10 not yet be admitted; 18, 19, 20 not yet admitted; 22 not
11 yet admitted, and I believe that's all.

12 MS. BROWN: That is it.

13 (Exhibit Nos. 1 through 38 marked for
14 identification and Exhibit Nos. 1 through 10, 14 through
15 17, 21 and 23 through 38 received in evidence.)

**FLORIDA POWER CORPORATION
DOCKET NO. 940001-EI**

**Re: Fuel and Capacity Cost Recovery
Final True-up Amounts for
April through September 1994**

**DIRECT TESTIMONY OF
KARL H. WIELAND**

1 **Q. Please state your name and business address.**

2 **A. My name is Karl H. Wieland. My business address is P. O. Box 14042,**
3 **St. Petersburg, Florida 33733.**

4
5 **Q. By whom are you employed and in what capacity?**

6 **A. I am employed by Florida Power Corporation as Director of Business**
7 **Planning.**

8
9 **Q. Have the responsibilities of your position with the Company remained the**
10 **same since you last testified in this proceeding?**

11 **A. Yes.**

12
13 **Q. What is the purpose of your testimony?**

14 **A. The purpose of my testimony is to describe the Company's Fuel Cost**
15 **Recovery Clause final true-up amount for the period of April through**
16 **September 1994, and the Company's Capacity Cost Recovery Clause final**
17 **true-up amount for the period of April through September 1994.**

1 **Q. Have you prepared exhibits to your testimony?**

2 A. Yes, I have prepared a three-page true-up variance analysis which
3 examines the difference between the estimated fuel true-up and the actual
4 period-end fuel true-up. This variance analysis is attached to my prepared
5 testimony and designated exhibit (KHW-1). Also attached to my prepared
6 testimony and designated exhibit (KHW-2) are the Capacity Cost Recovery
7 Clause true-up calculations for the April through September 1994 period.
8 In addition, I will sponsor Schedules A1 through A12 for the month of
9 September, 1994 (period-to-date), which have been previously filed with
10 the Commission and are also attached to my prepared testimony for ease
11 of reference.

12
13 **Q. What is the source of the data which you will present by way of
14 testimony or exhibits in this proceeding?**

15 A. Unless otherwise indicated, the actual data is taken from the books and
16 records of Company. The books and records are kept in the regular
17 course of business in accordance with generally accepted accounting
18 principles and practices, and provisions of the Uniform System of
19 Accounts as prescribed by this Commission.

20
21 **FUEL COST RECOVERY**

22 **Q. What is the Company's final true-up amount for fuel cost recovery?**

23 A. The fuel true-up balance as of September 30, 1994 is an under-recovery
24 of \$33,870,947. When the estimated under-recovery of \$31,586,452 to
25 be collected during the current period is taken into account, the final net

1 true-up amount attributable to the April - September 1994 period is an
2 under-recovery of \$2,284,495.

3

4 **Q. How was the final true-up amount determined?**

5 A. The amount was determined in the manner set forth on Schedule A2 of
6 the Commission's standard forms previously submitted by the Company
7 on a monthly basis.

8

9 **Q. What factors contributed to the period-ending under-recovery of \$33.9
10 million?**

11 A. The factors contributing to the under-recovery are summarized on Sheet
12 1 of my exhibit (KHW-1). It is the net result of changes in projected costs
13 on one hand, and changes in projected revenues on the other. The total
14 system cost of fuel and net power transactions for the period was \$33.6
15 million higher than projected, which was the combined effect of a \$29.5
16 million increase in jurisdictional costs and a \$4.1 million increase in
17 wholesale costs. Jurisdictional fuel revenues were \$1.4 million higher
18 than projected due to higher than projected sales. The combination of
19 significantly higher jurisdictional costs and slightly higher jurisdictional
20 revenues resulted in an under-recovery of \$28.2 million attributable to the
21 April - September 1994 period. Other variances not directly attributable
22 to the period, including an interest provision of \$0.6 million, result in the
23 total true-up under-recovery of \$33.9 million, as of September 30, 1994.

1 Q. Please explain the components shown on Sheet 2 of your exhibit which
2 produced the \$33.6 million system variance from the projected cost of
3 fuel and net power transactions.

4 A. Sheet 2 of my exhibit (KWH-1) shows an analysis of this system variance
5 for each energy source in terms of three interrelated components: (1)
6 changes in the amount (MWh's) of energy required; (2) changes in the
7 heat rate, or efficiency, of generated energy (BTU's per kWh); and (3)
8 changes in the unit price of either fuel consumed for generation (\$ per
9 million BTU) or energy purchases and sales (cents per kWh).

10
11 Q. What effect did these components have on the system fuel and net power
12 variance for the true-up period?

13 A. As can be seen from Sheet 2, variances in the amount of MWh
14 requirements from each energy source (column B) combined to produce
15 a cost increase of \$4.6 million. I will discuss this component of the
16 variance analysis in greater detail below.

17
18 The heat rate variance for each source of generated energy (column C)
19 produced a net cost increase of \$5.1 million. Higher than anticipated heat
20 rates for oil generating units were the largest component of the cost
21 variance. On the Company's Schedule A3, all BTU's for light oil are
22 included in the light oil heat rate computation. However since no kWh
23 generation is associated with light oil consumed at steam plants, the
24 resulting heat rate shown on A3 is distorted. In order to compute the true

1 heat rate variance, light oil consumed at steam units is shown separately
2 on line 23 of Sheet 2.

3
4 A cost increase of \$23.9 million resulted from the price variance
5 (column D), which was caused by a number of factors detailed on lines 1
6 through 26 of Sheet 2. The main factors were higher than projected
7 prices for oil (\$12.4 million) and purchased power (\$11.0 million).
8

9 **Q. What is the purpose of the analysis captioned "Reconciliation of Variances**
10 **in MWh Requirements," shown on Sheet 3 of your exhibit?**

11 **A. The analysis on Sheet 3 is an attempt to identify the effect that variances**
12 **in the MWh requirements of certain energy sources have on the MWh**
13 **variances of other energy sources. Although this interrelationship is**
14 **generally understood to exist, it is not readily apparent from the individual**
15 **variances contained in the A Schedules or in the analysis on Sheet 2. For**
16 **example, an increase in the MWh requirements of nuclear generation**
17 **shows up on Schedule A3 and on Sheet 2 of my exhibit as a cost**
18 **increase. While this may be correct in isolation, the true effect of**
19 **increased nuclear generation is obviously a corresponding decrease in the**
20 **MWh requirements of a number of other more costly energy sources,**
21 **primarily oil. The result is a lower net system cost even if total system**
22 **MWh requirements remain unchanged.**

23
24 In addition to this effect of variances in generation mix, the analysis also
25 attempts to identify the independent effect of the net variance in total

1 system MWh requirements from all energy sources combined. In this true-
2 up period, for example, total system requirements were lower than the
3 original forecast by 31,215 MWh. This would have led to lower net costs
4 even if the mix of generation had not changed, since the lower system
5 load decreases oil generation at a cost above the system average.
6

7 **Q. Please explain how this analysis was performed.**

8 A. The analysis on Sheet 3 is made in two steps. The first, captioned "MWh
9 Reconciliation," allocates the MWh variances for the individual energy
10 sources shown in column B among the primary causal variances in
11 columns C through H. Since the causal variances identified in this
12 analysis are not all inclusive, the amount of any residual over- or under-
13 allocation is shown in column I, "Unallocated Variances." The second
14 step, captioned "Cost Reconciliation," assigns a dollar value to the MWh
15 variances identified in step 1. This is done by allocating the cost
16 variances identified in column B of Sheet 2 for each energy source (and
17 shown again in column B of Sheet 3) among the causal variances based
18 on the MWh's allocated to each in step 1. As mentioned above, the
19 allocation of individual MWh and cost variances to the various causes of
20 those variances is not intended to be all inclusive or precise. It is intended
21 to be a representative approximation of the exceedingly complex cause
22 and effect relationship existing among the individual and total MWh
23 variances and their related cost variances.

1 **Q. What were the major contributors to the \$4.6 million cost increase**
2 **associated with the variance in MWh requirements?**

3 **A. Coal units had a higher availability than expected during the period, but**
4 **actual generation was 482,000 MWh lower than forecast due to**
5 **economic purchases of Southern UPS and purchases of non-dispatchable**
6 **cogen capacity. This contributed \$5.6 million to the variance. Lower than**
7 **expected system requirements during the period resulted in a \$0.9 million**
8 **reduction to the cost variance. Higher than expected nuclear generation**
9 **reduced overall costs by \$2.1 million. Other factors combined to increase**
10 **the variance by \$2.0 million.**

11

12 **CAPACITY COST RECOVERY**

13 **Q. What is the Company's final true-up amount for capacity cost recovery?**

14 **A. Exhibit (KHW-2), sheet 1, entitled "Calculation of Final True-Up Amount"**
15 **records the costs and revenues associated with the Capacity Cost**
16 **Recovery Clause for the period April through September 1994. The**
17 **capacity cost recovery true-up balance as of September 30, 1994 is an**
18 **over-recovery of \$6,943,182.**

19

20 **Q. Is this true-up calculation consistent with the true-up methodology used**
21 **for the other cost recovery clauses?**

22 **A. Yes it is. The calculation of the true-up amount follows the procedures**
23 **established by this Commission as set forth on Commission Schedule A2**
24 **"Calculation of True-Up and Interest Provision" for the Fuel Cost Recovery**
25 **Clause.**

1 Q. What factors contributed to the period-end over-recovery of \$6,943,182?

2 A. Exhibit (KHW-2), sheet 1, entitled "Summary of Final True-Up Amount",
3 compares the summary items from sheet 2 to the original forecast for the
4 period. As can be seen from sheet 1, actual capacity cost revenues were
5 \$0.8 million higher than forecast due to higher kWh sales during the
6 period. Jurisdictional capacity costs were \$6.1 million lower than
7 forecast. The major factors contributing to this variance were the failure
8 of Royster Phosphate to come on-line in August as expected, reduced
9 payments to Orlando Cogen, and lower than forecast payments to Lake
10 and Pasco Cogens.

11
12 Q. What is the Company's net true-up amount for capacity cost recovery?

13 A. When the estimated over-recovery of \$4,552,921 to be refunded during
14 the current period is subtracted from the period-end true-up of
15 \$6,943,182, the final net true-up amount attributable to the April -
16 September 1994 period is an over-recovery of \$2,390,261.

17
18 Q. Does this conclude your testimony?

19 A. Yes, it does.

FLORIDA POWER CORPORATION**DOCKET NO. 950001-EI****Levelized Fuel and Capacity Cost Factors
April through September 1995****AMENDED DIRECT TESTIMONY OF
KARL H. WIELAND**

1 Q. Please state your name and business address.

2 A. My name is Karl H. Wieland. My business address is Post Office Box
3 14042, St. Petersburg, Florida 33733.

4

5 Q. By whom are you employed and in what capacity?

6 A. I am employed by Florida Power Corporation as Director of Business
7 Planning.

8

9 Q. Have the duties and responsibilities of your position with the
10 Company remained the same since you last testified in this
11 proceeding?

12 A. Yes.

13

14 Q. What is the purpose of your testimony?

15 A. The purpose of my testimony is to present for Commission approval
16 the Company's levelized fuel and capacity cost factors for the period
17 of April through September 1995.

1 Q. Do you have an exhibit to your testimony?

2 A. Yes. I have prepared an exhibit attached to my prepared testimony
3 consisting of Parts A through D and the Commission's minimum filing
4 requirements for these proceedings, Schedules E1 through E10 and
5 H1, which contain the Company's levelized fuel cost factors and the
6 supporting data. Parts A through C contain the assumptions which
7 support the Company's cost projections, Part D contains the
8 Company's capacity cost recovery factors and supporting data.

9

10 FUEL COST RECOVERY

11 Q. Please describe the levelized fuel cost factors calculated by the
12 Company for the upcoming projection period.

13 A. Schedule E1, page 1 of the "E" Schedules in my exhibit, shows the
14 calculation of the Company's basic fuel cost factor of 1.891 ¢/kWh
15 (before line loss adjustment). The basic factor consists of a fuel cost
16 for the projection period of 1.9500 ¢/kWh (adjusted for jurisdictional
17 losses), a GPIF reward of .00644 ¢/kWh, and an estimated true-up
18 credit of 0.0672 ¢/kWh.

19

20 Utilizing this basic factor, Schedule E1-D shows the calculation and
21 supporting data for the Company's levelized fuel cost factors for
22 secondary, primary, and transmission metering tariffs. To accomplish
23 this calculation, effective jurisdictional sales at the secondary level
24 are calculated by applying 1% and 2% metering reduction factors to
25 primary and transmission sales (forecasted at meter level). This is

1 consistent with the methodology being used in the development of
2 the capacity cost recovery factors.

3
4 Schedule E1-E develops the TOU factors 1.280 ¢/kWh On-peak and
5 0.853 ¢/kWh Off-peak. The levelized fuel cost factors (by metering
6 voltage) are then multiplied by the TOU factors, which results in the
7 final fuel factors to be applied to customer bills during the projection
8 period. The final fuel cost factor for residential service is 1.894
9 ¢/kWh.

10
11 **Q. What is included in Schedule E1, line 4, "Adjustments to Fuel Cost"?**

12 **A.** Line 4 includes an estimate of Florida Power's liability for an annual
13 payment to the US Department of Energy for funding of the
14 decommissioning and decontamination of their nuclear fuel
15 enrichment facilities (\$1,259,000 in April), and an estimate of the
16 University of Florida project steam credits (\$160,000 per month).

17
18 **Q. What is included in Schedule E1, line 6, "Energy Cost of Purchased
19 Power"?**

20 **A.** Line 6 includes energy costs for the purchase of 50 MWs from
21 Tampa Electric Company and the purchase of 200-407 MWs under
22 a Unit Power Sales (UPS) agreement with the Southern Company.
23 During October-December 1994, the Southern Company purchase
24 consists of 200 MW of Schedule E and 202 MW of unit power.
25 Beginning January 1995, the Schedule E contract ends and the

1 Company will begin to purchase 407 MW of unit power. The capacity
2 payments associated with the UPS contract are based on the original
3 contract of 400 MW. The additional 7 MW are the result of revised
4 SERC ratings for the five units involved in the unit power purchase,
5 providing a benefit to Florida Power Corporation in the form of
6 reduced costs per kW. Both of these contracts have been in place
7 and have been approved for cost recovery by the Commission.
8 Capacity costs for these purchases are included in the capacity cost
9 recovery factor.

10
11 **Q. What is included in Schedule E1, line 8, "Energy Cost of Economy**
12 **Purchases (Non-Broker)"?**

13 **A. Line 8 includes energy costs for purchases from Seminole Electric**
14 **Cooperative (SECI) for load following, off-peak hydroelectric**
15 **purchases from the Southeast Electric Power Agency (SEPA), and**
16 **miscellaneous economy purchases from within or outside the state**
17 **which are not made through the Florida Broker System. The SECI**
18 **contract is an ongoing contract under which the Company purchases**
19 **energy from SECI at 95% of its avoided fuel cost. Purchases from**
20 **SEPA are on an as-available basis. There are no capacity payments**
21 **associated with either of these purchases. Other purchases may**
22 **have non-fuel charges, but since such purchases are made only if the**
23 **total cost of the purchase is lower than the Company's cost to**
24 **generate the energy, it is appropriate to recover the associated non-**

1 fuel costs through the fuel adjustment clause rather than the capacity
2 cost recovery factor.

3
4 **Q. Please explain the entry on Schedule E1, line 17, "Fuel Cost of**
5 **Supplemental Sales."**

6 **A. The Company has a wholesale contract with Seminole for the sale of**
7 **supplemental energy to supply the portion of their load in excess of**
8 **655 MW. The fuel costs charged to Seminole for these supplemental**
9 **sales are calculated on a "stratified" basis, in a manner which**
10 **recovers the higher cost of intermediate/peaking generation used to**
11 **provide the energy. The Company also has wholesale contracts with**
12 **the municipal utilities of Kissimmee and St. Cloud under which fuel**
13 **costs are charged in a similar manner. Unlike interchange sales, the**
14 **fuel costs of wholesale sales are normally included in the total cost**
15 **of fuel and net power transactions used to calculate the average**
16 **system cost per kWh for fuel adjustment purposes. However, since**
17 **the fuel costs of the Supplemental sales are not recovered on an**
18 **average cost basis, an adjustment has been made to remove these**
19 **costs and the related kWh sales from the fuel adjustment calculation**
20 **in the same manner that interchange sales are removed from the**
21 **calculation. This adjustment is necessary to avoid an over-recovery**
22 **by the Company which would result from the treatment of these fuel**
23 **costs on an average cost basis in this proceeding, while actually**
24 **recovering the costs from the Supplemental customers on a higher,**

1 stratified cost basis. The development of this adjustment is shown
2 on Schedule E6.

3
4 **Q. How was the estimated true-up shown on line 28 of Schedule E1**
5 **developed?**

6 **A. The total true-up amount was determined in two parts. First, a**
7 **period-to-date actual under-recovery of \$15,142,918 through**
8 **November 1995 was obtained from Schedule A2, page 3 of 4,**
9 **previously submitted for the month of November. This balance was**
10 **projected to the end of March 1995, including interest estimated at**
11 **the November ending rate of 0.4717% per month. Second, the total**
12 **estimated over-recovery of \$12,575,671 for the current period was**
13 **combined with the prior period (April through September 1994)**
14 **under-recovery of \$33,870,947 and \$31,586,452 being collected**
15 **during the current period for a total over-recovery of \$10,291,176 at**
16 **the end of March 1995. This results in an estimated true-up credit**
17 **on line 28 of Schedule E1 of 0.0672 ¢/kWh for application in the**
18 **April through September 1995 projection period. The development**
19 **of the estimated true-up amount for the current April through**
20 **September 1995 period is shown on Schedule E1-B, Sheet 1.**

21
22 **Q. What are the primary reasons for the projected March 1995 over-**
23 **recovery of \$4.6 million?**

24 **A. The over-recovery is primarily a result of lower coal prices, and lower**
25 **costs of power purchased from qualifying facilities.**

- 1 Q. Please explain the procedure for forecasting the unit cost of nuclear
2 fuel.
- 3 A. The cost per million BTU of the nuclear fuel which will be in the
4 reactor during the projection period (primarily Cycle 10, following the
5 1994 refueling outage) was developed from the projected cost of fuel
6 added during the current period's refueling outage and the
7 unamortized investment cost of the fuel remaining in the reactor from
8 the prior cycle (Cycle 9). Cycle 10 consists of several "batches," of
9 fuel assemblies which are separately accounted for throughout their
10 life in several fuel cycles. The cost for each batch is determined from
11 the actual cost incurred by the Company, which is audited and
12 reviewed by the Commission's field auditors. The expected available
13 energy from each batch over its life is developed from an evaluation
14 of various fuel management schemes and estimated fuel cycle
15 lengths. From this information, a cost per unit of energy (cents per
16 million BTU) is calculated for each batch. However, since the rate of
17 energy consumption is not uniform among the individual fuel
18 assemblies and batches within the reactor core, an estimate of
19 consumption within each batch must be made to properly weigh the
20 batch unit costs in calculating a composite unit cost for the overall
21 fuel cycle.
- 22
- 23 Q. How was the rate of energy consumption for each batch within Cycle
24 10 estimated for the upcoming projection period?

- 1 A. The consumption rate of each batch has been estimated by utilizing
2 a core physics computer program which simulates reactor operations
3 over the projection period. When this consumption pattern is applied
4 to the individual batch costs, the resultant composite Cycle 10 is
5 \$0.38 per million BTU.
6
- 7 Q. Would you give a brief overview of the procedure used in developing
8 the projected fuel cost data from which the Company's basic fuel
9 cost recovery factor was calculated?
- 10 A. Yes. The process begins with the fuel price forecast and the system
11 sales forecast. These forecasts are input into PROMOD, along with
12 purchased power information, generating unit operating
13 characteristics, maintenance schedules, and other pertinent data.
14 PROMOD then computes system fuel consumption, replacement fuel
15 costs, and energy purchases and costs. This data is input into a fuel
16 inventory model, which calculates average inventory fuel costs. This
17 information is the basis for the calculation of the Company's levelized
18 fuel cost factors and supporting schedules.
19
- 20 Q. What is the source of the system sales forecast?
- 21 A. The system sales forecast is made by the Forecasting section of the
22 Business Planning Department using the most recently available data.
23 The forecast used for this projection period was prepared in June
24 1994.

1 Q. Is the methodology used to produce the sales forecast for this
2 projection period the same as previously used by the Company in
3 these proceedings?

4 A. The methodology employed to produce the forecast for the projection
5 period is the same as used in the Company's most recent filings, and
6 was developed with a hybrid econometric/end-use forecasting model.
7 The forecast assumptions are shown in Part A of my exhibit.
8

9 Q. What is the source of the Company's fuel price forecast?

10 A. The fuel price forecast was made by the Fuel and Special Projects
11 Department based on forecast assumptions for residual oil, #2 fuel
12 oil, natural gas, and coal. The assumptions for the projection period
13 are shown in Part B of my exhibit. The forecasted prices for each
14 fuel type are shown in Part C.
15

16 CAPACITY COST RECOVERY

17 Q. How was the Capacity Cost Recovery factor developed?

18 A. The calculation of the capacity cost recovery factor (CCRF) is shown
19 in Part D of my exhibit. The factor allocates capacity costs to rate
20 classes in the same manner that they would be allocated if they were
21 recovered in base rates. A brief explanation of the schedules in the
22 exhibit follows.
23

24 Sheet 1: Projected Capacity Payments. This schedule contains
25 system capacity payments for Schedule E, UPS, TECO and QF

1 purchases. The retail portion of the capacity payments are calculated
2 using separation factors consistent with the Company's rate case
3 filing. Prior to the implementation of the CCRF, capacity costs for
4 these kinds of purchases were included on Schedules E8A and E9
5 and thus became part of the Company's basic Fuel Cost Factor
6 calculated on Schedule E1. The estimated recoverable capacity
7 payments for the April through September 1995 period are
8 \$115,781,701.

9
10 Sheet 2: Estimated/Actual True-Up. This schedule presents the
11 actual ending true-up balance after two months of the current period
12 and re-forecasts the over/(under) recovery balances for the next four
13 months to obtain an ending balance for the current period. This
14 estimated/actual balance of \$(2,908,435) is then carried forward to
15 Sheet 1, to be collected during the April through September 1995
16 period.

17
18 Sheet 3: Development of Jurisdictional Loss Multipliers: The same
19 delivery efficiencies and loss multipliers as presented on Schedule E1-
20 F.

21
22 Sheet 4: Calculation of 12 CP and Annual Average Demand. The
23 calculation of average 12 CP and annual average demand is based on
24 1994 load research data and the delivery efficiencies on Sheet 3.

17
18
19
20
21
22
23

Sheet 5: Calculation of Capacity Cost Recovery Factors. The total demand allocators in column (7) are computed by adding 12/13 of the 12 CP demand allocators to 1/13 of the annual average demand allocators. The CCRF for each secondary delivery rate class in cents per kWh is the product of total jurisdictional capacity costs (including revenue taxes) from Sheet 1, times the class demand allocation factor, divided by projected effective sales at the secondary level. The CCRF for primary and transmission rate classes reflect the application of metering reduction factors of 1% and 2% from the secondary CCRF.

Q. Please discuss the increase in capacity payments compared to the prior six-month period.

A. The increase in capacity payments from \$103.6 million in the October 1994 through September 1995 period to \$126.6 million for the April through September 1995 period is due to several factors. First, all contracts escalate to the 1995 payment schedule for the full projection period. Second, several contracts began during the prior period and will be in effect for the entire six months in the projection period. Third, two new contracts (Orange County and EcoPeat) begin operation during the projection period. Finally, the contract with Southern ("Miller contract") increases to 407 MW in January 1995 with the 200 MW schedule E expiring at the same time.

1 Q. Is the Company seeking to combine the capacity cost responsibilities
2 of its RS and GS non-demand rate schedules?

3 A. Yes. As a matter of ratemaking policy, the base rate energy charges
4 for Florida Power's RS and GS non-demand rate schedules have been
5 set the same since February, 1983. This was implemented to avoid
6 administrative problems of customers attempting to qualify for the
7 lower of the two rate schedules' charges. Since costs recovered
8 through the capacity cost recovery clause are a substitute or are
9 similar to costs that are recovered in base rates, Florida Power
10 believes that this cost should be recovered in a manner consistent
11 with the policy established for base rates, *i.e.*, combining the cost
12 responsibilities of RS and GS non-demand rate schedules to develop
13 the same factor for both schedules.

14
15 Q. Does this conclude your testimony?

16 A. Yes.

FLORIDA POWER CORPORATION

DOCKET NO. 940001-EI

**Re: GPIF Reward/Penalty Amount for
April through September 1994**

**DIRECT TESTIMONY OF
LARRY G. TURNER**

1 **Q. Please state your name and business address.**

2 A. My name is Larry G. Turner. My business address is P. O. Box
3 14042, St. Petersburg, Florida 33733.

4

5 **Q. By whom are you employed and in what capacity?**

6 A. I am employed by Florida Power Corporation as Performance
7 Engineer in Energy Supply Services.

8

9 **Q. What are your responsibilities as Performance Engineer?**

10 A. As the Performance Engineer, I am responsible for compiling and
11 reporting various operational statistics regarding the Company's
12 generating system. In particular, my duties include the preparation
13 of the information and material required by the Commission's GPIF
14 mechanism.

15

16 **Q. Please describe your educational background and professional
17 experience.**

1 A. I received a Bachelor's Degree in Mechanical Engineering from the
2 University of Florida in 1967. In 1984 I received my Professional
3 Engineers License for the State of Florida. I have been employed
4 by Florida Power Corporation since 1967, with the exception of a
5 three-year period from 1975 to 1978 at which time I was
6 employed by the Alachua County Abstract Company. From 1967
7 to 1975, I worked as a Test Engineer, Plant Engineer and
8 Mechanical Design Engineer. From 1978 to 1987, I worked as an
9 Instrument and Controls Engineer and since 1987 to the present,
10 I have worked in the Company's Plant Performance Section
11 preparing internal and regulatory reports.

12

13 **Q. What is the purpose of your testimony?**

14 A. The purpose of my testimony is to describe the calculation of the
15 Company's Generation Performance Incentive Factor (GPIF)
16 amount for the period of April through September 1994. This was
17 developed by comparing the actual performance of the Company's
18 seven GPIF generating units to the approved targets set for these
19 units prior to the period.

20

21 **Q. Do you have an exhibit to your testimony in this proceeding?**

22 A. Yes, under my direction an exhibit has been prepared consisting of
23 the numbered sheets which are attached to my prepared
24 testimony. The exhibit contains the schedules required by the

1 GPIF Implementation Manual, which support the development of
2 the incentive amount. I have also included other data forms to
3 supplement the required schedules.
4

5 **Q. What GPIF incentive amount have you calculated for this period?**

6 A. I have calculated the Company's GPIF incentive amount to be a
7 reward of \$986,547. This amount was developed in a manner
8 consistent with the GPIF Implementation Manual. Sheet 1 of my
9 exhibit shows the calculation of system GPIF points and the
10 corresponding reward. The summary of weighted incentive points
11 earned by each individual unit can be found on Sheet 3.
12

13 **Q. How were the incentive points for equivalent availability and heat
14 rate calculated for the individual GPIF units?**

15 A. The calculation of incentive points is made by comparing the
16 adjusted actual performance data for equivalent availability and
17 heat rate to the target performance indicators for each unit. This
18 comparison is shown on the Generating Performance Incentive
19 Points Table found in my exhibit Sheets 8 through 14.
20

21 **Q. Why is it necessary to make adjustments to the actual performance
22 data for comparison with the targets?**

23 A. Adjustments to the actual equivalent availability and heat rate data
24 are necessary to allow their comparison with the "target" Point

1 Tables exactly as approved by the Commission prior to the period.
2 These adjustments are described in the Implementation Manual and
3 are further explained by a Staff memorandum, dated October 23,
4 1981, directed to the GPIF utilities. The adjustments to actual
5 equivalent availability concern primarily the differences between
6 target and actual planned outage hours, and are shown on Sheet
7 6 of my exhibit. The heat rate adjustments concern the
8 differences between the target and actual Net Output Factor
9 (NOF), and are shown on Sheet 7. The methodology for both the
10 equivalent availability and heat rate adjustments are explained in
11 the Staff memorandum.

12
13 **Q. Have you provided the as-worked planned outage schedules for the**
14 **Company's GPIF units to support your adjustments to actual**
15 **equivalent availability?**

16 **A. Yes, Sheet 22 of my exhibit shows a comparison of target and**
17 **actual planned outage hours in bar-chart form. Sheets 23 through**
18 **26 present as-worked critical path charts for each unit which**
19 **experienced a planned outage during the period.**

20
21 **Q. Does this conclude your testimony?**

22 **A. Yes, it does.**

FLORIDA POWER CORPORATION

DOCKET No. 950001-EI

**GPIF Targets and Ranges for
April through September 1995**

**DIRECT TESTIMONY OF
LARRY G. TURNER**

1 **Q. Please state your name and business address.**

2 **A. My name is Larry G. Turner. My business address is Post Office Box**
3 **14042, St. Petersburg, Florida 33733.**

4
5 **Q. By whom are you employed and in what capacity?**

6 **A. I am employed by Florida Power Corporation as Senior Performance**
7 **Engineer.**

8
9 **Q. Have the duties and responsibilities of your position with the Company**
10 **remained the same since you last testified in this proceeding?**

11 **A. Yes, they have.**

12
13 **Q. What is the purpose of your testimony?**

1 A. The purpose of my testimony is to present the development of the
2 Company's Generating Performance Incentive Factor (GPIF) targets and
3 ranges for the period of April through September, 1995. This
4 development includes the targets and improvement/degradation ranges
5 for unit equivalent availability and unit average net operating heat rate
6 in accordance with the Commission's Generating Performance Incentive
7 Implementation Manual.

8

9 Q. Do you have an exhibit to your testimony?

10 A. Yes, I will sponsor an exhibit containing 73 pages, which consists of
11 the GPIF standard form schedules prescribed in the Implementation
12 Manual and supporting data, including unplanned outage rates, net
13 operating heat rates, and computer analyses and graphs for each of the
14 individual GPIF units, all of which are attached to my prepared
15 testimony.

16

17 Q. Which of the Company's generating units have you included in the GPIF
18 program for the upcoming projection period?

19 A. We have included the same units as were included for the current
20 period, Crystal River Units 1 through 5 and Anclote Units 1 and 2.

1 Q. Have you determined the equivalent availability targets and
2 improvement/degradation ranges for the Company's GPIF units?

3 A. Yes, I have. This information is included in the Target and Range
4 Summary on page 3 of my exhibit.

5
6 Q. How were the equivalent availability targets developed?

7 A. The equivalent availability targets were developed using the
8 methodology established for the Company's GPIF units, as set forth in
9 Section 4 of the Implementation Manual. This method describes the
10 formulation of graphs based on each unit's historic performance data
11 for the four individual unplanned outage rates (i.e. forced, partial forced,
12 maintenance and partial maintenance outage rates), which in
13 combination constitute the unit's equivalent unplanned outage rate
14 (EUOR). From operational data and these graphs, the individual target
15 rates are determined by inspecting two years of twelve-month rolling
16 averages and the scatter of monthly data points during the two-year
17 period. The unit's four target rates are then used to calculate its
18 unplanned outage hours for the projection period. When the unit's
19 projected planned outage hours are taken into account, the hours
20 calculated from these individual unplanned outage rates can then be
21 converted into an overall equivalent unplanned outage factor (EUOF).

1 Because factors are additive (unlike rates), the unplanned and planned
2 outage factors (EUOF and POF) when added to the equivalent
3 availability factor (EAF) will always equal 100%. For example, an EUOF
4 of 15% and a POF of 10% results in an EAF of 75%.

5
6 The supporting graphs and a summary table of all target and range rates
7 are contained in the section of my exhibit entitled "Unplanned Outage
8 Rate Tables and Graphs".

9
10 **Q. What is the target equivalent availability factor for Crystal River 3?**

11 **A. The EAF target for Crystal River Unit 3 is 93.96%. The unit's EUOR**
12 **target is 6.04, and the EUOF target is 6.04% because no mid-cycle**
13 **outage is planned in 1995.**

14
15 **Q. Please describe the method utilized in the development of the**
16 **improvement/degradation ranges for each GPIF unit's availability**
17 **targets.**

18 **A. In general, the methodology described in the implementation manual**
19 **was used. Ranges were first established for each of the four unplanned**
20 **outage rates associated with each unit. From an analysis of the**
21 **unplanned outage graphs, units with small historical variations in outage**

1 rates were assigned narrow ranges and units with large variations were
2 assigned wider ranges. These individual ranges, expressed in terms of
3 rates, were then converted into a single unit availability range,
4 expressed in terms of a factor, using the same procedure described
5 above for converting the availability targets from rates to factors.
6

7 **Q. Have you determined the net operating heat rate targets and ranges for**
8 **the Company's GPIF units?**

9 **A. Yes, I have. This information is included in the Target and Range**
10 **Summary on Page 3 of my exhibit.**
11

12 **Q. How were these heat rate targets and ranges developed?**

13 **A. The development of the heat rate targets and ranges for the upcoming**
14 **period utilized historical data from the past three comparable GPIF**
15 **periods, as described in the Implementation Manual. A "least squares"**
16 **computer program was used to curve-fit the heat rate data within**
17 **ranges having a 90% confidence level of including all data. The**
18 **computer analyses and data plots used to develop the heat rate targets**
19 **and ranges for each of the GPIF units are contained in the section of**
20 **my exhibit entitled "Average Net Operating Heat Rate Curves".**

1 Q. How were the GPIF incentive points developed for the unit availability
2 and heat rate ranges?

3 A. GPIF incentive points for availability and heat rate were developed by
4 evenly spreading the positive and negative point values from the target
5 to the maximum and minimum values in case of availability, and from
6 the neutral band to the maximum and minimum values in the case of
7 heat rate. The fuel savings (loss) dollars were evenly spread over the
8 range in the same manner as described for the incentive points. The
9 maximum savings (loss) dollars are the same as those used in the
10 calculation of weighting factors.

11
12 Q. How were the GPIF weighting factors determined?

13 A. To determine the weighting factors for availability, a series of PROMOD
14 simulations were made in which each unit's maximum equivalent
15 availability was substituted for the target value to obtain a new system
16 fuel cost. The differences in fuel costs between these cases and the
17 target case determines the contribution of each unit's availability to fuel
18 savings. Except for Crystal River 3, the heat rate contribution of each
19 unit to fuel savings was determined by multiplying the BTU savings
20 between the minimum and target heat rates (at constant generation) by
21 the average cost per BTU for that unit. For Crystal River 3, the

1 contribution of heat rate to fuel savings was developed in a manner
2 similar to the fuel savings from availability, since an improvement in the
3 nuclear unit's efficiency results in a corresponding increase in the unit's
4 generating capacity. Weighting factors were then calculated by dividing
5 each individual unit's fuel savings by total system fuel savings.
6

7 **Q. What was the basis for determining the estimated maximum incentive**
8 **amount?**

9 **A. The determination of the maximum reward or penalty was based upon**
10 **monthly common equity projections obtained from a detailed financial**
11 **simulation performed by the Company's Corporate Model.**

12
13 **Q. Does this conclude your testimony?**

14 **A. Yes.**

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION
FLORIDA POWER & LIGHT COMPANY
TESTIMONY OF C. VILLARD
DOCKET NO. 950001-EI
January 17, 1995

- 1 Q. Please state your name and address.
2
3 A. My name is Claude Villard. My business address is
4 700 Universe Boulevard, Juno Beach, Florida 33408.
5
6 Q. By whom are you employed and what is your position?
7
8 A. I am employed by Florida Power & Light Company
9 (FPL) as Supervisor of Nuclear Fuel Procurement.
10
11 Q. Have you previously testified in this docket?
12
13 A. No, this is the first time I will be filing
14 testimony in this docket.
15
16 Q. Briefly describe your educational background and
17 employment history.
18
19 A. I am a graduate of Lowell Technological Institute,

1 in Lowell, Massachusetts, with a Bachelor's Degree
2 in Nuclear Engineering. I also hold a Master of
3 Science Degree in Nuclear Engineering from the
4 University of Lowell. From 1974 to 1979, I worked
5 at Combustion Engineering (CE), a vendor and
6 designer of nuclear reactors and nuclear fuel.
7 There, I was involved in core neutronic performance
8 calculations and in thermal hydraulic analyses of
9 nuclear fuel assemblies and reactor internals,
10 during both steady state and transient conditions.
11 As Assistant Project Manager at CE, I managed the
12 safety and licensing analyses required for the
13 reload fuel, supplied by CE to a number of nuclear
14 units. Subsequent to my employment at CE, I held a
15 number of supervisory positions both at FPL and at
16 Yankee Atomic Electric company, all related to fuel
17 management and fuel procurement. In my current
18 position as Supervisor of Nuclear Fuel Procurement,
19 I am responsible for procurement and management of
20 nuclear fuel contracts for uranium, conversion,
21 enrichment services and the contract for spent fuel
22 disposal with the Department of Energy. In
23 addition, I am responsible for the development of
24 new contracts for fuel fabrication services and
25 nuclear fuel cost forecasting, inventory management

1 and reporting.

2

3 Q. What is the purpose of your testimony?

4

5 A. The purpose of my testimony is to present and
6 explain FPL's projections of nuclear fuel costs for
7 the thermal energy (MMBTU) to be produced by our
8 nuclear units and costs of disposal of spent
9 nuclear fuel. Both of these costs were input
10 values to POWRSYM for the calculation of the
11 proposed fuel cost recovery factor for the period
12 April 1995 through September 1995.

13

14 Q. What is the basis for FPL's projections of nuclear
15 fuel costs?

16

17 A. FPL's nuclear fuel cost projections are developed
18 using energy production at our nuclear units and
19 their operating schedules, consistent with those
20 assumed in POWRSYM, for the period April 1995
21 through September 1995.

22

23 Q. Please provide FPL's projection for nuclear fuel
24 unit costs and energy for the period April 1995
25 through September 1995.

1 A. We estimate the nuclear units will produce
2 128,460,891 MBTU of energy at a cost of \$0.427 per
3 MMBTU, excluding spent fuel disposal costs for the
4 period April 1995 through September 1995.
5 Projections by nuclear unit and by month are
6 provided on Schedule E-4 of Appendix II.

7
8 Q. Please provide FPL's projection for nuclear spent
9 fuel disposal costs for the period April 1995
10 through September 1995 and what is the basis for
11 FPL's projection.

12
13 A. FPL's projections for nuclear spent fuel disposal
14 costs are provided on Schedule E-2 of Appendix II.
15 These projections are based on FPL's contract with
16 the DOE, which sets the spent fuel disposal fee at
17 1 mill per net Kwh generated minus transmission and
18 distribution line losses.

19
20 In prior fuel cost recovery periods, FPL had
21 received refunds from the DOE for past overpayment,
22 when the utilities were required to pay on the
23 basis of net generation without adjustments for
24 transmission and distribution line losses. The
25 last refund was received in October 1994 and

1 therefore, there will be no further refund in
2 future periods.

3

4 **Q.** Please provide FPL's projection for Decontamination
5 and Decommissioning (D&D) costs to be paid in the
6 period April 1995 through September 1995 and what
7 is the basis for FPL's projection.

8

9 **A.** As indicated in prior testimony, The National
10 Energy Policy Act of 1992 (The Act) requires FPL to
11 make certain payments to a fund established at the
12 U.S. Treasury, to cover the cost of decontamination
13 and decommissioning DOE's enrichment facilities.
14 D&D payments are in direct proportion to the amount
15 of enrichment services purchased by FPL divided by
16 the amount produced by the DOE through October
17 1992. Currently, FPL has contributed \$14,534,395
18 into the D&D fund and expects to make deposits over
19 a total period of fifteen years. Future deposits
20 into the D&D fund are scheduled to be annually on
21 the last day of October, therefore, FPL is not
22 projecting D&D costs to be paid during this fuel
23 cost recovery period.

24

25

1 Q. Are there currently any unresolved disputes under
2 FPL's nuclear fuel contracts?

3

4 A. Yes. As reported in prior testimonies, there are
5 two unresolved disputes.

6

7 The first dispute is under FPL's contract with the
8 Department of Energy (DOE) for final disposal of
9 spent nuclear fuel. FPL, along with a number of
10 electric utilities, has filed suit against the DOE
11 over DOE's denial of its obligation to accept spent
12 nuclear fuel beginning in 1998. The suit requests
13 that the court affirm DOE's legal obligation to
14 begin accepting spent nuclear fuel in 1998.
15 Further, the court is requested to direct the DOE
16 to develop a program of acceptance of spent nuclear
17 fuel on a timely basis and make regular periodic
18 reports on its progress. In addition, the suit
19 requests that, if appropriate, all or a portion of
20 the utilities' Nuclear Waste Fund Fees be paid into
21 an escrow account.

22

23 The Public Service Commission and the Florida
24 Attorney General is participating in a similar suit
25 with other states and public utility commissions.

1 Secondly, FPL is currently seeking to resolve a
2 price dispute for uranium enrichment services
3 purchased from the United States (US) government,
4 after October 1, 1992.

5
6 Our contract for enrichment services with the US
7 Government calls for pricing to be calculated in
8 accordance with "Established DOE Pricing Policy".
9 Such policy had always been one of cost recovery,
10 which included costs related to the Decontamination
11 and Decommissioning (D&D) of the DOE's enrichment
12 facilities. However, the Energy Policy Act of 1992
13 (The Act) requires utilities to make separate
14 payments to the US Treasury for D&D, starting in
15 Fiscal 1993, as FPL has been doing. Therefore, D&D
16 should not have been included in the price charged
17 by DOE since then, and the price should have been
18 reduced accordingly. FPL has written to DOE to
19 request such refund. DOE's response so far has
20 been to acknowledge our letter and to request
21 clarifying information on the amount of our claim.

22
23 In addition, The Act created a new US Government
24 corporation, the United States Enrichment
25 Corporation (USEC). Effective July 1, 1993, The

1 Act transferred from the DOE to the USEC all US
2 Government contracts, for the production and sales
3 of enrichment services. Because of the transfer
4 to the USEC, cost of producing enrichment services
5 has decreased significantly. For example, the USEC
6 no longer needs to account for the costs of D&D,
7 because the Act requires that utilities make
8 separate payments for D&D. However, the USEC has
9 continued to charge the same price charged by DOE
10 prior to the transfer.

11
12 FPL has filed three claims with the USEC's
13 contracting officer, challenging the price for
14 enrichment services. FPL believes that USEC's
15 price should be based on recovery of its costs. At
16 a minimum, FPL believes that the price must be
17 lowered to reflect the separate payment it is
18 making to cover D&D costs. USEC has not modified
19 its price to date, and has rejected our claims. We
20 are currently reviewing our next step with legal
21 counsel. Meanwhile, FPL is paying the invoices
22 submitted by the USEC, while objecting under a
23 reservation of rights. The current price paid to
24 the USEC is assumed in our projection. FPL will
25

1 continue to keep the Commission informed on all
2 aspects of this dispute with the USEC.

3

4 **Q. Does this conclude your testimony?**

5

6 **A. Yes, it does.**

7

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 950001-EI
CONTINUING SURVEILLANCE AND REVIEW OF
FUEL COST RECOVERY CLAUSES OF ELECTRIC UTILITIES

Direct Testimony of
George Bachman
On Behalf of
Florida Public Utilities Company

- 1 Q. Please state your name and business address.
- 2 A. George Bachman, 401 South Dixie Highway, West Palm Beach, FL
3 33401.
- 4 Q. By whom are you employed?
- 5 A. I am employed by Florida Public Utilities Company.
- 6 Q. Have you previously testified in this Docket?
- 7 A. Yes.
- 8 Q. What is the purpose of your testimony at this time?
- 9 A. I will briefly describe the basis for the computations that
10 were made in the preparation of the various Schedules that we
11 have submitted in support of the April 1995 - September 1995
12 fuel cost recovery adjustments for our two electric divisions.
13 In addition, I will advise the Commission of the projected
14 differences between the revenues collected under the levelized
15 fuel adjustment and the purchased power costs allowed in
16 developing the levelized fuel adjustment for the period October
17 1994 - March 1995 and to establish a "true-up" amount to be
18 collected or refunded during April 1995 - September 1995.
- 19 Q. Were the schedules filed by your Company completed under your
20 direction?
- 21 A. Yes.

1 Q. Which of the Staff's set of schedules has your company
2 completed and filed?

3 A. We have filed Schedules E1, E1A, E1-B, E1B-1, E2, E7, E8 and
4 E10 for Marianna and Fernandina Beach. They are included in
5 Composite Prehearing Identification Number GMB-1.
6 These schedules support the calculation of the levelized fuel
7 adjustment factor for April 1995 - September 1995. Schedule
8 E1-B shows the Calculation of Purchased Power Costs and
9 Calculation of True-Up and Interest Provision for the period
10 October 1994 - March 1995 based on 2 Months Actual and 4 Months
11 Estimated data.

12 Q. In derivation of the projected cost factor for the April 1995 -
13 September 1995 period, did you follow the same procedures that
14 were used in the prior period filings?

15 A. Yes.

16 Q. Why has the GSLD rate class for Fernandina Beach been excluded
17 from these computations?

18 A. Demand and other purchased power costs are assigned to the GSLD
19 rate class directly based on their actual CP KW and their
20 actual KWH consumption. That procedure for the GSLD class has
21 been in use for several years and has not been changed herein.
22 Costs to be recovered from all other classes is determined
23 after deducting from total purchased power costs those costs
24 directly assigned to GSLD.

25 Q. How will the demand cost recovery factors for the other rate

1 classes be used?

2 A. The demand cost recovery factors for each of the RS, GS, GSD
3 and OL-SL rate classes will become one element of the total
4 cost recovery factor for those classes. All other costs of
5 purchased power will be recovered by the use of the levelized
6 factor that is the same for all those rate classes. Thus the
7 total factor for each class will be the sum of the respective
8 demand cost factor and the levelized factor for all other
9 costs.

10 Q. What are the total cost recovery factors for those rate classes
11 in Fernandina Beach beginning April 1, 1995 after adjustments
12 for line losses multipliers and the revenue tax factor?

13 A. The factors are as follows:

14	RS	.05036 \$/KWH
15	GS	.04770 \$/KWH
16	GSD	.04581 \$/KWH
17	OL & SL	.03996 \$/KWH

18 Q. Please address the calculation of the total true-up amount to
19 be collected or refunded during the April 1995 - September 1995
20 period.

21 A. We have determined that at the end of March 1995 based on two
22 months actual and four months estimated, we will have under-
23 recovered \$143,938 in purchased power costs in our Marianna
24 division. Based on estimated sales for the period April 1995 -
25 September 1995, it will be necessary to add .10226¢ per KWH to

1 collect this under-recovery.

2 In Fernandina Beach we will have over-recovered \$137,540 in
3 purchased power costs. This amount will be refunded at .10812¢
4 per KWH during the April 1995 - September 1995 period. Page 3
5 and 12 of Composite Prehearing Identification Number GMB-1
6 provides a detail of the calculation of the true-up amounts.

7 Q. Looking back upon the April 1994 - September 1994 period, what
8 were the actual End of Period - True-Up amounts for Marianna
9 and Fernandina Beach, and their significance, if any?

10 A. The Marianna Division experienced an under-recovery of \$258,074
11 and Fernandina Beach Division over-recovered \$263,721. The
12 amounts both represent fluctuations of less than 10% from the
13 total fuel charges for the period and are not considered
14 significant variances from projections.

15 Q. What are the final remaining true-up amounts for the period
16 April 1994 through September 1994 for both divisions?

17 A. In Marianna the final remaining true-up amount was an under-
18 recovery of \$230,486. The final remaining true-up amount for
19 Fernandina Beach was an under-recovery of \$25,350.

20 Q. What are the estimated true-up amounts for the period of
21 October 1994 through March 1995?

22 A. In Marianna, there is an estimated over-recovery of \$86,548.
23 Fernandina Beach has an estimated over-recovery of \$162,890.

24 Q. What will the total fuel adjustment factor, excluding demand
25 cost recovery, be for both divisions for the period April 1995

1 - September 1995?

2 A. In Marianna the total fuel adjustment factor as shown on Line
3 33, Schedule E1, is 3.221¢ per KWH. In Fernandina Beach the
4 total fuel adjustment factor for "other classes", as shown on
5 Line 43, Schedule E1, amounts to 3.584¢ per KWH.

6 Q. Please advise what a residential customer using 1,000 KWH will
7 pay for the period April 1995 - September 1995 including base
8 rates (which include revised conservation cost recovery
9 factors) and fuel adjustment factor and after application of a
10 line loss multiplier.

11 A. In Marianna a residential customer using 1,000 KWH will pay
12 \$73.97, an increase of \$2.27 from the previous period. In
13 Fernandina Beach a customer will pay \$70.39, an increase of
14 \$.67 from the previous period.

15 Q. Does this conclude your testimony?

16 A. Yes.

GULF POWER COMPANY

Before the Florida Public Service Commission

Prepared Direct Testimony of

M. L. Gilchrist

Docket No. 940001-EI

Date of Filing: November 14, 1994

1
2
3
4
5
6
7
8
9

10 Q. Please state your name and business address.

11 A. My name is Malcolm Lane Gilchrist and my business address is 500
12 Bayfront Parkway, Post Office Box 1151, Pensacola, Florida 32520-0328.

13

14 Q. By whom are you employed and in what capacity?

15 A. I am the Manager of Fuel and Environmental Affairs for Gulf Power
16 Company.

17

18 Q. Mr. Gilchrist, will you please describe your education and experience?

19 A. I graduated from Auburn University in 1958 with a Bachelor of Science
20 Degree in Electrical Engineering. I joined Gulf Power Company in 1961
21 as a Field Engineer. Since then, I have held various positions with the
22 Company, including Power Sales Engineer; Division Sales Supervisor;
23 Division Engineer; Supervisor of Fuel Supply; Assistant Plant Manager,
24 Crist Electric Generating Plant; and Manager of Interchange and Fuel
25 Supply. I was promoted to my present position in June 1989.

1 Q. What are your duties as Manager of Fuel and Environmental Affairs?

2 A. I manage the fuel supply and environmental compliance activities of the
3 Company. My responsibilities include fuel procurement, contract
4 administration, and budgeting.

5
6 Q. Are you the same Malcolm Lane Gilchrist who has previously testified
7 before this Commission on various fuel matters?

8 A. Yes.

9
10 Q. Mr. Gilchrist, what is the purpose of your testimony in this docket?

11 A. The purpose of my testimony is to summarize Gulf Power Company's fuel
12 expenses and to certify that these expenses were properly incurred during
13 the period April 1994 through September 1994. Also, it is my intent to be
14 available to answer any questions that may arise among the parties to this
15 docket concerning Gulf Power Company's fuel expenses.

16
17 Q. Have you prepared an exhibit that contains information to which you will
18 refer in your testimony?

19 A. Yes. I have prepared an exhibit consisting of one Schedule.

20
21 Counsel: We ask that Mr. Gilchrist's exhibit consisting of 1 schedule
22 be marked as Exhibit No. _____ (MLG-1).

23
24 Q. During the period April 1, 1994 through September 30, 1994, how did Gulf's
25 actual fuel expenses compare with the budget or projected expenses?

1 A. Gulf's actual fuel expense was \$106,504,730 as compared with the
2 projected amount of \$111,171,243, or under our estimate by 4.20%.
3 Gulf's total net system generation was 5,497,665 MWH compared to the
4 projected generation of 5,957,220 MWH or 7.71% less than predicted.
5 The resulting total fuel cost per KWH generated was 1.9373¢/KWH or
6 3.81% over the projected amount of 1.8662¢/KWH.

7
8 Q. How did the projected purchase cost of coal compare with the actual
9 cost?

10 A. For the period, Gulf's average unit cost of coal purchased was 2.24% less
11 than projected.

12
13 Q. Mr. Gilchrist, did Gulf Power make any significant changes in its fuel
14 purchasing program during the twelve months ending September 1994?

15 A. Yes. Gulf Power completed negotiations with Peabody Coal Sales
16 concerning changes in Gulf's long term coal supply prompted by the
17 requirements under Phase I of the Clean Air Act. Those negotiations
18 resulted in termination of the old agreement with Peabody Coal Company
19 and in a new agreement for a coal supply that will allow the Company to
20 meet the requirements for Phase I. Peabody Coal Sales will supply a
21 blend of Venezuelan and Illinois coal sufficiently low in sulfur content to
22 ensure compliance with Phase I of the Clean Air Act. The delivered cost
23 of this new agreement coal is less than costs under the old agreement
24 with Peabody Coal Company.

25

1 Gulf Power also amended the transportation contract with the Ohio
2 River Company effective July 1, 1994, in order to achieve additional cost
3 savings to the customers.

4
5 Q. What was the effect of the suspension agreement with Peabody Coal
6 Company?

7 A. The agreement simply suspended the purchases/deliveries that would
8 otherwise have been made during the period under the Company's long-
9 term coal supply agreement with Peabody. During the suspension period,
10 Gulf procured coal on the spot market to replace the suspended Peabody
11 purchases/deliveries. Under the agreement, Gulf made a one-time
12 payment of \$16,389,423 to Peabody. Gulf calculated that this payment
13 and the suspension agreement allowed the Company to achieve net fuel
14 cost savings for its customers through the replacement of the suspended
15 coal with coal purchased on the spot market.

16
17 Q. Are you in a position to address the total net savings achieved through the
18 suspension agreement and the purchases of replacement coal?

19 A. Yes. We have now shipped and received all the replacement coal
20 tonnage for the Peabody Suspension Agreement. The total net savings
21 was \$14,479,865. At the time the decision to enter into the Suspension
22 Agreement was made, we projected savings of \$12,358,227.

23
24 Q. What coal supply changes are taking place at Plant Daniel?

25 A. The current fuel supply program is called a seasonal Powder River Basin

1 (PRB) fuel program. During the off peak season, when full plant capacity
2 is not normally needed, the plant will burn lower cost PRB coal. During
3 the peak season, when full plant capacity is required, the plant will burn
4 high Btu western coal. To date, the seasonal fuel program is working very
5 well.

6
7 Q. Do you mean that Plant Daniel will operate below its rated capacity on
8 PRB coal?

9 A. Yes. Plant Daniel is unable to reach its rated capacity while burning PRB
10 coals. However, high Btu coal is being stockpiled so that the units can be
11 changed over within 8-10 hours and achieve full capacity if needed. As
12 the plant gains experience in burning the PRB coal, we expect the plant to
13 increase its capacity. Plant Daniel has been transitioning to the seasonal
14 PRB coal supply during 1994.

15
16 Q. How much spot coal did Gulf Power Company purchase during the period
17 ending September 30, 1994?

18 A. Gulf purchased 1,307,270 tons or 53% of its supply from the spot coal
19 market. My Schedule 1 of Exhibit No. 23 (MLG-1) consists of a
20 list of contract and spot coal suppliers for the period ending
21 September 30, 1994.

22
23 Q. How are coal prices determined under Gulf's long-term contracts?

24 A. Under all of Gulf's long-term coal contracts, Gulf pays a base price per ton

1 plus cost escalations that have occurred since the coal contract began.
2 The base price with cost escalations type contract is a long term
3 agreement on quantity, quality, and escalation factors that provides the
4 buyer with an assured source of coal of known quality. The price of coal
5 supplied under this type of contract will not go up and down with current
6 market conditions.

7

8 Q. Should Gulf's fuel purchase cost for the period be accepted as reasonable
9 and prudent?

10 A. Yes. Gulf's coal purchases were primarily either from coal vendors with
11 long term contracts subject to cost escalations or from a competitively bid
12 spot purchase order. These coal vendors were selected by procedures
13 designed to provide an assured quantity of coal of a known quality for a
14 specific term at the lowest available delivered cost. Gulf has administered
15 the provisions of these contracts and purchase orders appropriately. All
16 of Gulf's oil purchases were from oil vendors selected by open bids to
17 insure the most economical price of oil.

18

19 Q. Mr. Gilchrist, does this conclude your testimony?

20 A. Yes.

21

22

23

Q. Please state your name and business address.

A. My name is M. L. Gilchrist, and my business address is 500 Bayfront Parkway, Pensacola, Florida, 32520-0328.

Q. By whom are you employed and in what capacity?

A. I am Manager of Fuel and Environmental Affairs for Gulf Power Company.

Q. Mr. Gilchrist, will you please describe your education and experience?

A. I graduated from Auburn University in 1958 with a Bachelor of Science Degree in Electrical Engineering. I joined Gulf Power Company in 1961 as a Field Engineer. Since then, I have held various positions with the Company, including Power Sales Engineer, Division Sales Supervisor, Division Engineer, Supervisor of Fuel Supply, Assistant Plant Manager at Crist Electric Generating Plant, and Manager of Interchange and Fuel Supply. I was promoted to my present position June 1, 1989.

Q. What are your duties as Manager of Fuel and Environmental Affairs?

A. I manage the fuel supply and environmental compliance activities of the Company. My responsibilities include fuel procurement, fuel contract administration, and fuel budgeting.

1 Q. Are you the same Lane Gilchrist who has previously testified before this
2 Commission on various fuel matters?

3 A. Yes.
4

5 Q. Mr. Gilchrist, what is the purpose of your testimony in this docket?

6 A. The purpose of my testimony is to support Gulf Power Company's
7 projection of fuel expenses for the period April 1, 1995 to September 30,
8 1995 and to be available to answer any questions that may occur
9 concerning the Company's fuel procurement
10

11 Q. Have you prepared an exhibit that contains information to which you will
12 refer in your testimony?

13 A. Yes. I have prepared an exhibit consisting of one schedule. Schedule 1
14 of my exhibit is a tabulation of projected and actual fuel cost for the past
15 ten years. The purpose of this schedule is to illustrate the accuracy of our
16 short term projections of fuel expenses.
17

18 COUNSEL: We ask that Mr. Gilchrist's exhibit, consisting of one
19 schedule, be marked as Exhibit No. 24 (MLG-2).
20

21 Q. Has Gulf Power Company made any changes to its projection methods
22 for this period?

23 A. No.
24
25

1 Q. Will there be any major changes in Gulf's fuel purchasing program during
2 this period?

3 A. No.
4

5 Q. Has the Company included expenditures for emission allowances in its
6 projection of fuel costs for this filing?

7 A. Yes. Phase I of the CAA became effective January 1, 1995, therefore,
8 this projection does include an estimate of the cost of allowances to be
9 expended during the period.
10

11 Q. How is the number of allowances expected to be used projected?

12 A. The same fuel budget model that predicts the coal burn also forecasts the
13 number of tons of sulfur burned, which is readily converted to tons of SO₂.
14 The nominal percent sulfur in the coal is simply multiplied by the tons of
15 coal burned.
16

17 Q. How was the cost of allowances to be expended determined for the
18 forecast?

19 A. The projected cost of allowances was determined by a method very
20 similar to fuel inventory as specified by FERC procedures. In other
21 words, allowances are held "in stock" at cost and are "issued" at the
22 projected cost of allowances which is based on anticipated allowances
23 granted net of allowance sales, purchases, and transfers.
24
25

1 Q. How much spot market coal does Gulf Power project it will purchase
2 during April 1995 through September 1995?

3 A. We are projecting the purchase of approximately 470,000 tons. This
4 represents approximately 33% of our projected purchase requirements.
5

6 Q. Mr. Gilchrist, does this conclude your testimony?

7 A. Yes.

GULF POWER COMPANY

Before the Florida Public Service Commission
Direct Testimony of
M. W. Howell
Docket No. 940001-EI
Date of Filing: November 14, 1994

1
2
3
4
5
6
7
8
9
10
11
12

13 Q. Please state your name, business address and occupation.

14 A. My name is M. W. Howell, and my business address is 500
15 Bayfront Parkway, Pensacola, Florida 32501. I am
16 Manager of Transmission and System Control for Gulf
17 Power Company.

18

19 Q. Have you previously testified before this Commission?

20 A. Yes. I have testified in various rate case,
21 cogeneration, territorial dispute, planning hearing,
22 fuel clause adjustment, and purchased power capacity
23 cost recovery dockets.

24

25 Q. Please summarize your educational and professional
26 background.

27 A. I graduated from the University of Florida in 1966 with
28 a Bachelor of Science Degree in Electrical Engineering.
29 I received my Masters Degree in Electrical Engineering
30 from the University of Florida in 1967, and then joined
31 Gulf Power Company as a Distribution Engineer. I have

1 since served as Relay Engineer, Manager of Transmission,
2 Manager of System Planning, Manager of Fuel and System
3 Planning, and Manager of Transmission and System
4 Control. My experience with the Company has included
5 all areas of distribution operation, maintenance, and
6 construction; transmission operation, maintenance, and
7 construction; relaying and protection of the generation,
8 transmission, and distribution systems; planning the
9 generation, transmission, and distribution system
10 additions in the future; bulk power interchange
11 administration; overall management of fuel planning and
12 procurement; and operation of the system dispatch
13 center.

14 I have served as a member of the Engineering
15 Committee and the Operating Committee of the
16 Southeastern Electric Reliability Council, chairman of
17 the Generation Subcommittee and member of the Edison
18 Electric Institute System Planning Committee, and
19 chairman or member of a number of various technical
20 committees and task forces within the Southern electric
21 system and the Florida Electric Power Coordinating
22 Group, regarding a variety of technical issues including
23 system operations, bulk power contracts, generation
24 expansion, transmission expansion, transmission
25 interconnection requirements, central dispatch,

1 transmission system operation, transient stability,
2 underfrequency operation, generator underfrequency
3 protection, system production costing, computer
4 modeling, and others.

5
6 Q. What is the purpose of your testimony in this
7 proceeding?

8 A. I will summarize Gulf Power Company's purchased power
9 fuel costs for energy purchases and sales that were
10 incurred during the April 1, 1994 through September 30,
11 1994 recovery period. I will then compare these actual
12 costs to their projected levels for the period and
13 discuss the primary reasons for the differences.

14 I will also summarize the actual capacity expenses
15 and revenues that were incurred during the recovery
16 period, compare these figures to their projected levels,
17 and discuss the reasons for the differences.

18
19 Q. During the period April 1, 1994 through September 30,
20 1994, what was Gulf's actual purchased power fuel cost
21 for energy purchases and how did it compare with the
22 projected amount?

23 A. Gulf's actual total purchased power fuel cost for energy
24 purchases, as shown on line 11 of Schedule A-1, was
25 \$19,806,789 as compared to the projected amount of

1 \$5,822,000. This resulted in a variance above budget of
2 \$13,984,789, or 240%. The actual fuel cost per KWH
3 purchased was 1.8403 ¢/KWH as compared to 1.8380 ¢/KWH,
4 or 0.1% above the projection.
5

6 Q. What were the events that influenced Gulf's purchase of
7 energy?

8 A. Gulf was able to purchase significantly more economy
9 power through the Southern electric power pool to meet
10 its load than was forecasted for the period due to the
11 availability of lower cost pool energy. Gulf purchased
12 1,076,290,940 KWH, shown on line 11 of Schedule A-1, as
13 compared to the estimate of 316,750,000 KWH, or 240%
14 more. The actual average cost was 1.8403 ¢/KWH as
15 compared to the estimate of 1.8380 ¢/KWH, a very slight
16 increase of 0.0023 ¢/KWH over budget.

17 This average actual fuel cost of purchases of
18 1.8403 ¢/KWH was actually 5% less per KWH than Gulf's
19 actual average fuel cost of system generation, shown on
20 line 4, which was 1.9373 ¢/KWH. Gulf's system net
21 generation was 5,497,665,000 KWH, or 8% under our
22 estimate, but was over budget in unit cost by 4%.
23
24
25

1 Q. During the period April 1, 1994 through September 30,
2 1994, what was Gulf's actual purchased power fuel cost
3 for energy sales and how did it compare with the
4 projected amount?

5 A. Gulf's actual total purchased power fuel cost for energy
6 sales, as shown on line 17 of Schedule A-1, was
7 \$29,469,775 as compared to the projected amount of
8 \$22,775,400. This resulted in a variance above budget
9 of \$6,694,375, or 29%. The actual fuel cost per KWH
10 sold was 1.8039 ¢/KWH as compared to 1.8596 ¢/KWH, or 3%
11 below the projection.

12

13 Q. What were the events that influenced Gulf's sale of
14 energy?

15 A. Gulf's off-system sales, shown on line 17, were
16 1,633,709,618 KWH, or 33% over the projection for the
17 period. These off-system sales were over the projection
18 due to Gulf's increased sale of energy to the Southern
19 electric system power pool to meet the pool's obligation
20 for these sales. The lower cost of energy available
21 from Gulf's resources compared with the cost of energy
22 generated by the other pool members allowed Gulf to sell
23 more energy than budgeted to the pool for off-system
24 obligations.

25

1 Q. How are Gulf's net purchased power fuel costs affected
2 by Southern electric system energy sales?

3 A. As a member of the Southern electric system power pool,
4 Gulf Power participates in these sales. Gulf's
5 generating units are economically dispatched to meet the
6 needs of its territorial customers, the system, and
7 off-system customers.

8 Therefore, Southern system energy sales provide a
9 market for Gulf's surplus energy and generally improve
10 unit load factors. The cost of fuel used to make these
11 sales is credited against, and therefore reduces, Gulf's
12 fuel and purchased power costs.

13

14 Q. During the period April 1, 1994 through September 30,
15 1994, how did Gulf's actual net purchased power capacity
16 transactions compare with the net projected
17 transactions?

18 A. In a previous cost recovery proceeding in Docket No.
19 940001-EI, I testified that the projected net purchased
20 power capacity cost for the April 1, 1994 through
21 September 30, 1994 recovery period was \$494,906. The
22 actual net capacity cost was \$622,607. This represents
23 an increase in cost of \$127,701, or 26% more than
24 projected.

25 The projected net IIC capacity cost for the

1 April 1, 1994 through September 30, 1994 recovery period
2 was \$1,094,906. The actual net IIC capacity cost for
3 the filing period was \$1,204,135, or 10% more than
4 projected.

5 The projected Florida Power Corporation Schedule E
6 capacity revenue for the period was \$600,000. The
7 actual Schedule E capacity revenue for the recovery
8 period was \$581,528, or 3% less than projected.

9
10 Q. Please explain the reasons for this difference.

11 A. First, Gulf's actual net IIC capacity cost was higher
12 than budget because there was more actual system
13 capacity to be equalized because of higher demand side
14 program capacity and a lower actual system load.

15 Therefore, Gulf was responsible for sharing a
16 percentage of an increased level of system capacity and
17 the company had a slightly increased IIC capacity cost.

18 Second, Gulf's actual FPC Schedule E capacity
19 revenue was below budget because the Southern electric
20 system was required to give FPC capacity charge credits
21 due to reduced capacity transfer capabilities on the
22 Southern / Florida transmission interface caused by
23 Tropical Storm Alberto.

24
25

1 Q. Does this conclude your testimony?

2 A. Yes.

3

25

GULF POWER COMPANY

Before the Florida Public Service Commission
Direct Testimony of
M. W. Howell
Docket No. 950001-EI
Date of Filing: January 17, 1995

1
2
3
4
5
6 Q. Please state your name, business address and occupation.

7 A. My name is M. W. Howell, and my business address is 500
8 Bayfront Parkway, Pensacola, Florida 32501. I am
9 Manager of Transmission and System Control for Gulf
10 Power Company.

11
12 Q. Have you previously testified before this Commission?

13 A. Yes. I have testified in various rate case,
14 cogeneration, territorial dispute, planning hearing,
15 fuel clause adjustment, and purchased power capacity
16 cost recovery dockets.

17
18 Q. Please summarize your educational and professional
19 background.

20 A. I graduated from the University of Florida in 1966 with
21 a Bachelor of Science Degree in Electrical Engineering.
22 I received my Masters Degree in Electrical Engineering
23 from the University of Florida in 1967, and then joined
24 Gulf Power Company as a Distribution Engineer. I have
25 since served as Relay Engineer, Manager of Transmission,

1 Manager of System Planning, Manager of Fuel and System
2 Planning, and Manager of Transmission and System
3 Control. My experience with the Company has included
4 all areas of distribution operation, maintenance, and
5 construction; transmission operation, maintenance, and
6 construction; relaying and protection of the generation,
7 transmission, and distribution systems; planning the
8 generation, transmission, and distribution system
9 additions in the future; bulk power interchange
10 administration; overall management of fuel planning and
11 procurement; and operation of the system dispatch
12 center.

13 I have served as a member of the Engineering
14 Committee and the Operating Committee of the
15 Southeastern Electric Reliability Council, chairman of
16 the Generation Subcommittee and member of the Edison
17 Electric Institute System Planning Committee, and
18 chairman or member of a number of various technical
19 committees and task forces within the Southern electric
20 system and the Florida Electric Power Coordinating
21 Group, regarding a variety of technical issues including
22 system operations, bulk power contracts, generation
23 expansion, transmission expansion, transmission
24 interconnection requirements, central dispatch,
25 transmission system operation, transient stability,

1 underfrequency operation, generator underfrequency
2 protection, system production costing, computer
3 modeling, and others.

4
5 Q. What is the purpose of your testimony in this
6 proceeding?

7 A. The purpose of my testimony is to support Gulf Power
8 Company's projection of purchased power fuel costs for
9 energy purchases and sales and its projection of
10 purchased power capacity costs for the period April,
11 1995 - September, 1995.

12
13 Q. Have you prepared an exhibit that contains information
14 to which you will refer in your testimony?

15 A. Yes. My exhibit consists of one schedule to which I
16 will refer. This schedule was prepared under my
17 supervision and direction.

18 Counsel: We ask that Mr. Howell's Exhibit,
19 comprised of one Schedule, be
20 marked for identification as
21 Exhibit 25 (MWH-1).

22
23
24
25

1 Q. What are Gulf's projected purchased power recoverable
2 costs for energy purchases and sales for the April, 1995
3 - September, 1995 recovery period?

4 A. Gulf's projected recoverable cost for energy purchases,
5 shown on line 12 of Schedule E-1 of the fuel filing, is
6 \$10,212,000. The projected fuel cost for energy sales,
7 shown on line 18 of Schedule E-1, is \$17,870,200. These
8 transactions result from Gulf's participation in the
9 coordinated operation of the Southern electric system
10 power pool. These amounts are used by Gulf's witness
11 Susan Cranmer as an input in the calculation of the fuel
12 and purchased power cost adjustment factor.

13

14 Q. What information is contained in your exhibit?

15 A. Schedule 1 of my exhibit lists the names of the power
16 contracts which are included for capacity cost recovery,
17 their associated megawatt amounts, and the resulting
18 capacity dollar amounts.

19

20 Q. Which power contracts produce capacity transactions that
21 are recovered through Gulf's purchased power capacity
22 cost recovery factors?

23 A. In previous proceedings, the Commission has authorized
24 the Company to include capacity transactions under the
25 Southern electric system's Intercompany Interchange

1 Contract (IIC) and the Long-Term Non-Firm Contract
2 (Schedule E) with Florida Power Corporation (FPC) for
3 recovery through the purchased power capacity cost
4 recovery factors. Because Schedule E capacity sales to
5 FPC ended on December 31, 1994, Gulf will only have IIC
6 capacity transactions during the April, 1995 -
7 September, 1995 recovery period. In this case, the
8 energy transactions under the contract are handled for
9 cost recovery purposes through the fuel cost recovery
10 factors. At this time, Gulf does not participate in any
11 other power contracts that would produce capacity
12 transactions during the relevant recovery period.

13

14 Q. Have there been any changes to the IIC with regard to
15 capacity transactions since the last recovery factor
16 adjustment proceedings?

17 A. No, there have not been any changes to the contract
18 itself. However, on November 1, 1994, in accordance
19 with both the contract and the requirements of the
20 Federal Energy Regulatory Commission (FERC), the
21 Southern electric system made its annual IIC
22 informational filing with the FERC. The informational
23 filing reflects updated historical load responsibility
24 ratios, the expected system load, and the capacity
25 amounts for 1995 that are used in the capacity

1 equalization calculation performed pursuant to the IIC
2 to determine the capacity transactions and costs for
3 each operating company. These updates have increased
4 Gulf's projected capacity payments for the April, 1995 -
5 September, 1995 recovery period by \$36,008 from what
6 they otherwise would have been prior to the update.
7

8 Q. What are Gulf's IIC capacity transactions that are
9 projected for the April, 1995 - September, 1995 recovery
10 period?

11 A. As shown on Schedule 1 of my exhibit, capacity
12 transactions under the IIC vary from month to month.
13 IIC capacity purchases in the amount of \$2,333,038 are
14 projected for the period. IIC capacity sales during the
15 same period are projected to be \$337,070. The
16 combination of these yields the Company's net capacity
17 transactions under the IIC for the period, which are net
18 purchases amounting to \$1,995,968. This compares to net
19 purchases of \$5,425,921 that were projected for the
20 period October, 1994 - March, 1995.

21

22 Q. What are Gulf's total projected net capacity
23 transactions for the April, 1995 - September, 1995
24 recovery period?

25 A. As shown on Schedule 1 of my exhibit, the net purchases

1 under the IIC will cause Gulf to have a projected net
2 capacity cost of \$1,995,968. Because Schedule E sales
3 to FPC have ended, this IIC capacity cost is Gulf's
4 total net cost to be included for recovery. This figure
5 is used by Ms. Cranmer as one of the inputs in the
6 calculation of the total capacity transactions to be
7 recovered through the purchased power capacity cost
8 recovery factors to be applied in the recovery period.

9
10 Q. Does this conclude your testimony?

11 A. Yes.

12
13
14
15
16
17
18
19
20
21
22
23
24
25

1 GULF POWER COMPANY
2 Before the Florida Public Service Commission
3 Prepared Direct Testimony of
4 Susan D. Cranmer
5 Docket No. 940001-EI
6 Date of Filing: November 14, 1994

7 Q. Please state your name, business address, and
8 occupation.

9 A. My name is Susan Cranmer. My business address is 500
10 Bayfront Parkway, Post Office Box 1151, Pensacola,
11 Florida, 32520-1151. I hold the position of Supervisor
12 of Rate Services.

13 Q. Please briefly describe your educational background and
14 business experience.

15 A. I graduated from Wake Forest University in
16 Winston-Salem, North Carolina in 1981 with a Bachelor
17 of Science Degree in Business and from the University
18 of West Florida in 1982 with a Bachelor of Arts Degree
19 in Accounting. I am also a Certified Public Accountant
20 licensed in the State of Florida. I joined Gulf Power
21 Company in 1983 as a Financial Analyst. I have held
22 various positions with Gulf including Computer Modeling
23 Analyst and Senior Financial Analyst. In 1991, I
24 assumed the position of Supervisor of Rate Services and
25 presently serve in that capacity.

1 My responsibilities include supervision of tariff
2 administration, cost of service, calculation of cost
3 recovery factors, and the regulatory filing function of
4 the Rates and Regulatory Matters Department.

5

6 Q. Have you prepared an exhibit that contains information
7 to which you will refer in your testimony?

8 A. Yes, I have.

9 Counsel: We ask that Ms. Cranmer's
10 Exhibit consisting of four
11 schedules be marked as
12 Exhibit No. ____ (SDC-1).

13

14 Q. Are you familiar with the Fuel and Purchased Power
15 (Energy) True-up Calculation and the Purchased Power
16 Capacity Cost True-Up Calculation for the period of
17 April 1994 through September 1994 set forth in your
18 exhibit?

19 A. Yes. These documents were prepared under my
20 supervision.

21

22 Q. Have you verified that to the best of your knowledge
23 and belief, the information contained in these
24 documents is correct?

25 A. Yes, I have.

1 Q. What is the amount to be refunded or collected through
2 the fuel cost recovery factor in the period April 1995
3 through September 1995?

4 A. An amount to be collected of \$2,394,382 was calculated
5 as shown in Schedule 1 of my exhibit.

6
7 Q. How was this amount calculated?

8 A. The \$2,393,795 was calculated by taking the difference
9 in the estimated April 1994 through September 1994
10 under-recovery of \$1,969,504 as approved in Order No.
11 PSC-94-1092-FOF-EI, dated September 6, 1994 and the
12 actual under-recovery of \$4,363,886 which is the sum of
13 lines 7, 8, and 12 shown on Schedule A-2, page 3 of 4,
14 Period-to-date of the monthly filing for September
15 1994.

16
17 Q. Ms. Cranmer, you stated earlier that you are
18 responsible for the Purchased Power Capacity Cost
19 True-up Calculation. Which schedules of your exhibit
20 relate to the calculation of these factors?

21 A. Schedules CCA-1, CCA-2, and CCA-3 of my exhibit relate
22 to the Purchased Power Capacity Cost True-up
23 Calculation for the period April 1994 through September
24 1994.

25

1 Q. What is the amount to be refunded or collected in the
2 period April 1995 through September 1995?

3 A. An amount to be refunded of \$221,434 was calculated as
4 shown in Schedule CCA-1 of my exhibit.
5

6 Q. How was this amount calculated?

7 A. The \$221,434 was calculated by taking the difference in
8 the estimated April 1994 through September 1994
9 over-recovery of \$56,118 as approved in Order No.
10 PSC-94-1092-FOF-EI, dated September 6, 1994 and the
11 actual over-recovery of \$277,552 which is the sum of
12 lines 11 and 12 under the total column on Schedule
13 CCA-2.
14

15 Q. Please describe Schedules CCA-2 and CCA-3 of your
16 exhibit.

17 A. Schedule CCA-2 shows the calculation of the actual
18 over-recovery of purchased power capacity costs for the
19 period April 1994 through September 1994. Schedule
20 CCA-3 of my exhibit is the calculation of the interest
21 provision on the over-recovery. This is the same
22 method of calculating interest that is used in the Fuel
23 and Purchased Power (Energy) Cost Recovery Clause and
24 the Environmental Cost Recovery Clause.
25

1 Q. Ms. Cranmer, does this complete your testimony?

2 A. Yes, it does.

GULF POWER COMPANY

Before the Florida Public Service Commission
Prepared Direct Testimony of
Susan D. Cranmer
Docket No. 950001-EI
Fuel and Purchased Power Capacity Cost Recovery
Date of Filing: January 17, 1995

- 1
- 2
- 3
- 4
- 5
- 6 Q. Please state your name, business address and occupation.
- 7 A. My name is Susan Cranmer. My business address is 500
- 8 Bayfront Parkway, Pensacola, Florida 32501. I hold the
- 9 position of Supervisor of Rate Services for Gulf Power
- 10 Company.
- 11
- 12 Q. Please briefly describe your educational background and
- 13 business experience.
- 14 A. I graduated from Wake Forest University in
- 15 Winston-Salem, North Carolina in 1981 with a Bachelor of
- 16 Science Degree in Business and from the University of
- 17 West Florida in 1982 with a Bachelor of Arts Degree in
- 18 Accounting. I am also a Certified Public Accountant
- 19 licensed in the State of Florida. I joined Gulf Power
- 20 Company in 1983 as a Financial Analyst. I have held
- 21 various positions with Gulf including Computer Modeling
- 22 Analyst and Senior Financial Analyst. In 1991, I
- 23 assumed the position of Supervisor of Rate Services and
- 24 presently serve in that capacity.
- 25

1 My responsibilities include supervision of tariff
2 administration, cost of service, calculation of cost
3 recovery factors, and the regulatory filing function of
4 the Rates and Regulatory Matters Department.

5

6 Q. Have your previously filed testimony before this
7 Commission in Docket No. 950001-EI?

8 A. Yes, I have.

9

10 Q. What is the purpose of your testimony?

11 A. The purpose of my testimony is to discuss the
12 calculation of Gulf Power's fuel cost recovery factors
13 for the period April 1995 through September 1995. I
14 will also discuss the calculation of the purchased power
15 capacity cost recovery factors for that period.

16

17 Q. Are you familiar with the Fuel and Purchased Power Cost
18 Recovery Clause Calculation for the period of April 1995
19 through September 1995?

20 A. Yes, these documents were prepared under my supervision.

21

22 Q. Have you verified that to the best of your knowledge and
23 belief, the information contained in these documents is
24 correct?

25 A. Yes, I have.

1 Counsel: We ask that Ms. Cranmer's Exhibit
2 consisting of fifteen schedules,
3 along with Schedules A1 through A12
4 previously filed with the Commission for
5 the months of June, July, August,
6 September, October, and November 1994,
7 be marked as Exhibit No. 27 (SDC-2).
8

9 Q. Ms. Cranmer, what has Gulf calculated as the true-up to
10 be applied in the period April 1995 through September
11 1995?

12 A. The true-up for this period is an increase of .064¢/kwh.
13 This includes a final true-up under-recovery of
14 \$2,394,382. As shown on Schedule E-1A, it also includes
15 an estimated true-up under-recovery of \$556,052 for the
16 current period. The resulting under-recovery is
17 \$2,950,434.
18

19 Q. What has been included in this filing to reflect the
20 GPIF reward/penalty for the period of April 1994 through
21 September 1994?

22 A. This is shown on Line 32b of Schedule E-1 as an increase
23 of .0005¢/kwh, thereby rewarding Gulf by \$22,931.
24
25

- 1 Q. Ms. Cranmer, what is the levelized projected fuel factor
2 for the period April 1995 through September 1995?
- 3 A. Gulf has proposed a levelized fuel factor of 2.314¢/kwh.
4 It includes projected fuel and purchased power energy
5 expenses for April 1995 through September 1995 and
6 projected kwh sales for the same period, as well as the
7 true-up and GPIF reward. The proposed levelized fuel
8 factor also includes the special recovery amount
9 associated with the Air Products special contract. The
10 calculation of the special recovery amount is presented
11 on Schedule E-12 of my exhibit. The levelized fuel
12 factor has not been adjusted for line losses.
13
- 14 Q. Ms. Cranmer, how were the line loss multipliers used on
15 Schedule E-1E calculated?
- 16 A. They were calculated in accordance with procedures
17 approved in prior filings and were based on Gulf's
18 latest mwh Load Flow Allocators.
19
- 20 Q. Ms. Cranmer, what fuel factor does Gulf propose for its
21 largest group of customers (Group A), those on Rate
22 Schedules RS, GS, GSD, OSIII, and OSIV?
- 23 A. Gulf proposes a standard fuel factor, adjusted for line
24 losses, of 2.342¢/kwh for Group A. Fuel factors for
25

1 Groups A, B, C, and D are shown on Schedule E-1E. These
2 factors have also been adjusted for line losses.

3

4 Q. Ms. Cranmer, how were the time-of-use fuel factors
5 calculated?

6 A. These were calculated based on projected loads and
7 system lambdas for the period April 1995 through
8 September 1995. These factors included the GPIF,
9 true-up, and special contract recovery cost amounts and
10 were adjusted for line losses. These time-of-use fuel
11 factors are also shown on Schedule E-1E.

12

13 Q. How does the proposed fuel factor for Rate Schedule RS
14 compare with the factor applicable to March and how will
15 the change affect the cost of 1000 kwh on Gulf's
16 residential rate RS?

17 A. The current fuel factor applicable to March 1995 is
18 2.206¢/kwh compared with the proposed factor of
19 2.342¢/kwh. For a residential customer who uses
20 1000 kwh in April 1995, the fuel portion of the bill
21 will increase from \$22.06 to \$23.42.

22

23 Q. Ms. Cranmer, has Gulf updated its estimates of the
24 as-available avoided energy costs to be shown on COG1 as
25 required by Order No. 13247 issued May 1, 1984 in Docket

1 No. 830377-EI and Order No. 19548 issued June 21, 1988
2 in Docket No. 880001-EI?

3 A. Yes. A tabulation of these costs is set forth in
4 Schedule E-11 of my Exhibit SDC-2. These costs
5 represent the estimates for the period from April 1995
6 through March 1997.

7
8 Q. Ms. Cranmer, you stated earlier that you are responsible
9 for the calculation of the purchased power capacity cost
10 recovery factors. Which schedules of your exhibit
11 relate to the calculation of these factors?

12 A. Schedule CCE-1, including CCE-1a and CCE-1b, and
13 Schedule CCE-2 of my exhibit relate to the calculation
14 of the purchased power capacity cost recovery factors
15 for the period April 1995 through September 1995.

16
17 Q. Please describe Schedule CCE-1 of your exhibit.

18 A. Schedule CCE-1 shows the calculation of the amount of
19 capacity payments to be recovered through the Purchased
20 Power Capacity Cost Recovery Clause. Mr. Howell has
21 provided me with Gulf's projected purchased power
22 capacity transactions under the Southern Company
23 Intercompany Interchange Contract (IIC). Gulf's
24 projected capacity payments for the period April 1995
25 through September 1995 are purchases of \$1,995,968. The

1 jurisdictional amount is \$1,924,085. For the period,
2 Gulf's requested recovery before true-up is the
3 difference between the jurisdictional projected
4 purchased power capacity costs and the approved
5 adjustment for former capacity transactions embedded in
6 current base rates. This adjustment amount was fixed in
7 Order No. PSC-93-0047-FOF-EI, dated January 12, 1993, as
8 an embedded credit of \$839,290, or \$826,000 net of
9 revenue taxes. Thus, the projected recovery amount to
10 be collected through the purchased power capacity cost
11 recovery factors in the period April 1995 through
12 September 1995 is \$2,750,085. This amount is added to
13 the total true-up amount to determine the total
14 purchased power capacity transactions to be recovered
15 through the factors to be applied in the period.

16

17 Q. What has Gulf calculated as the purchased power capacity
18 factor true-up to be applied in the period April 1995
19 through September 1995?

20 A. The true-up for this period is a decrease of \$120,011 as
21 shown on Schedule CCE-1a. This includes a final
22 capacity cost true-up over-recovery of \$221,434. It
23 also includes an estimated under-recovery of \$101,423
24 for the period October 1994 through March 1995, as
25 calculated on Schedule CCE-1b.

1 Q. What methodology was used to allocate the capacity
2 payments to rate class?

3 A. As required by Commission Order No. 25773 in Docket
4 No. 910794-EQ, the revenue requirements have been
5 allocated using the cost of service methodology used in
6 Gulf's last full requirements rate case and approved by
7 the Commission in Order No. 23573 issued October 3, 1990
8 in Docket No. 891345-EI. Although the capacity payments
9 in that cost of service study were allocated to rate
10 class using the demand allocator based on the twelve
11 monthly coincident peaks projected for the test year,
12 for purposes of the purchased power capacity cost
13 recovery clause, Gulf has allocated the net purchased
14 power capacity costs to rate class with 12/13th on
15 demand and 1/13th on energy. This allocation is
16 consistent with the treatment accorded to production
17 plant in the cost of service study used in Gulf's last
18 rate case.

19
20 Q. How were the allocation factors calculated for use in
21 the Purchased Power Capacity Cost Recovery Clause?

22 A. The allocation factors used in the Purchased Power
23 Capacity Cost Recovery Clause have been calculated using
24 the 1993 load data filed with the Commission in
25 accordance with FPSC Rule 25-6.0437. The calculations

1 of the allocation factors are shown in columns A through
2 I on page 1 of Schedule CCE-2.

3

4 Q. Please describe the calculation of the cents/kwh factors
5 by rate class used to recover purchased power capacity
6 costs.

7 A. As shown in columns A through D on page 2 of Schedule
8 CCE-2, 12/13th of the jurisdictional capacity cost to be
9 recovered is allocated to rate class based on the demand
10 allocator, with the remaining 1/13th allocated based on
11 energy. The total revenue requirement assigned to each
12 rate class shown in column E is then divided by that
13 class's projected kwh sales for the six-month period to
14 calculate the purchased power capacity cost recovery
15 factor. This factor will be applied to each customer's
16 total kwh to calculate the amount to be billed each
17 month.

18

19 Q. What is the amount related to purchased power capacity
20 costs recovered through this factor that will be
21 included on a residential customer's bill for 1000 kwh?

22 A. The purchased power capacity costs recovered through the
23 clause for a residential customer who uses 1000 kwh will
24 be \$.70.

25

1 Q. When does Gulf propose to collect these new fuel charges
2 and purchased power capacity charges?

3 A. These factors will apply to April 1995 through September
4 1995 billings beginning with Cycle 1 meter readings
5 scheduled on March 30, 1995 and ending with meter
6 readings scheduled on September 27, 1995.

7

8 Q. Ms. Cranmer, does this complete your testimony?

9 A. Yes, it does.

25

1 GULF POWER COMPANY
2 Before the Florida Public Service Commission
3 Direct Testimony of
4 G. D. Fontaine
5 Docket No. 940001-EI
6 Date of Filing November 14, 1994

- 7 Q. Please state your name, address and occupation.
- 8 A. My name is George D. Fontaine, my business address is
9 Post Office Box 1151, Pensacola, Florida 32520, and my
10 position is Performance Test Specialist for Gulf Power
11 Company.
- 12
- 13 Q. Please describe your educational and business
14 background.
- 15 A. I received my Bachelor of Mechanical Engineering Degree
16 from Auburn University in 1980. Following graduation,
17 I joined Gulf Power Company as an Associate Engineer at
18 the Scholz Electric Generating Plant, and as I
19 previously stated, my current position is Performance
20 Test Specialist. I am also a registered Professional
21 Engineer in the State of Florida.
- 22
- 23 Q. Mr. Fontaine, have you previously testified in this
24 Docket?
- 25 A. Yes, sir.

1 Q. Mr. Fontaine, what is the purpose of your testimony in
2 this proceeding?

3 A. The purpose of my testimony is to present GPIF results
4 for Gulf Power Company for the period of April 1, 1994,
5 through September 30, 1994.

6
7 Q. Mr. Fontaine, have you prepared an exhibit that
8 contains information to which you will refer in your
9 testimony?

10 A. Yes, Sir, I have prepared an exhibit consisting of five
11 schedules.

12
13 Q. Mr. Fontaine, was this exhibit prepared by you or under
14 your direction and supervision?

15 A. Yes, it was.

16

17 Counsel: We ask that Mr. Fontaine's exhibit be
18 marked for identification as exhibit 28 (GDF-1).

19

20 Q. Mr. Fontaine, before reviewing the GPIF Results for
21 Gulf's units, is there any information which has been
22 supplied to the Commission pertaining to this GPIF
23 period which requires amendment?

24 A. Yes, some corrections need to be made to the actual
25 unit performance data which was submitted monthly to

1 the Commission during this period. These corrections
2 are based on discoveries made during our final review
3 to determine the accuracy of this information prior to
4 this proceeding. The Actual Unit Performance Data
5 tables on pages 14 to 19 of Schedule 5 incorporate
6 these changes. The data contained on these tables is
7 the data upon which the GPIF calculation was made.
8

9 Q. Mr. Fontaine, would you now review the Company's
10 equivalent availability results for the period?

11 A. Actual equivalent availability and adjusted actual
12 equivalent availability figures for each of the
13 Company's GPIF units are shown on page 13 of Schedule
14 5. Pages 3 through 8 of Schedule 2 contain the
15 calculations for the adjusted actual equivalent
16 availabilities.

17 A calculation of GPIF availability points based on
18 these availabilities and the targets established by
19 Commission Order PSC-94-0390-FOF-EI is on page 9 of
20 Schedule 2. The results are: Crist 6, -5.50 points;
21 Crist 7, +10.00 points; Smith 1, +10.00 points; Smith
22 2, +10.00 points; Daniel 1, -10.00 points, and Daniel
23 2, +10.00 points.
24
25

1 Q. Mr. Fontaine, what were the heat rate results for the
2 period?

3 A. The detailed calculation of the actual average net
4 operating heat rates for the Company's GPIF units is on
5 pages 2 through 7 of Schedule 3. These heat rate
6 figures have not at this point been adjusted in
7 accordance with GPIF procedures for load and other
8 factors to the bases of their targets.

9 As was done for the prior GPIF periods, and as
10 indicated on pages 8 through 13 of Schedule 3, the
11 target setting equations were used to adjust actual
12 results to the target bases. These equations,
13 submitted in January 1994, are shown on page 15 of
14 Schedule 3.

15 As calculated on page 16 of Schedule 3, the
16 adjusted actual average net operating heat rates
17 correspond to GPIF unit heat rate points of: -5.15 for
18 Crist 6, -1.51 for Crist 7; 0.00 for Smith 1, -6.67 for
19 Smith 2; +3.07 for Daniel 1; and +2.32 for Daniel 2.
20
21
22
23
24
25

1 Q. Mr. Fontaine, what number of Company points were
2 achieved during the period, and what reward or penalty
3 is indicated by these points according to the GPIF
4 procedure?

5 A. Using the unit equivalent availability and heat rate
6 points previously mentioned, along with the appropriate
7 weighting factors, the Company points would be +0.28 as
8 indicated on page 2 of Schedule 4. This calculated to
9 a reward in the amount of \$22,931.

10

11 Q. Mr. Fontaine, would you please summarize your
12 testimony?

13 A. Yes, Sir. In view of the adjusted actual equivalent
14 availabilities, as shown on page 9 of Schedule 2, and
15 the adjusted actual average net operating heat rates
16 achieved, as shown on page 16 of Schedule 3, evidencing
17 the Company's performance for the period, Gulf
18 calculates a reward in the amount of \$22,931 as
19 provided for by the GPIF plan.

20

21 Q. Mr. Fontaine, does this conclude your testimony?

22 A. Yes, Sir.

23

24

25

1 **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2 **PREPARED DIRECT TESTIMONY**

3 **OF**

4 **W. N. CANTRELL**

5
6 **Q.** Please state your name, address and occupation.

7
8 **A.** My name is William N. Cantrell. My mailing address is
9 P. O. Box 111, Tampa, Florida 33601, and my business
10 address is 6820 South Tamiami Trail, North Ruskin, Florida
11 33570. I am Vice President-Energy Supply of Tampa Electric
12 Company.

13
14 **Q.** Please furnish a brief outline of your educational
15 background and business experience.

16
17 **A.** I was educated in the public schools of Tampa, Florida and
18 received a Bachelor of Science degree in Electrical
19 Engineering from the Georgia Institute of Technology in
20 1974. I am a registered Professional Engineer licensed in
21 the State of Florida. I also received a Master of Business
22 Administration degree in 1979 from the University of Tampa.
23 I have been employed at Tampa Electric Company since June
24 1975. Since that time I have served as Manager of
25 Generation Planning, Assistant Director, Budgets and

1 Director of Fuels. In 1987, I was elected Vice President
2 of the company. In 1994, I was elected to my current
3 position as Vice President-Energy Supply.
4

5 Q. Will you describe some of the responsibilities of your
6 present position?
7

8 A. As Vice President - Energy Supply, I am responsible for the
9 engineering, operation, maintenance, and construction of
10 the power production facilities including safety of
11 personnel and equipment, security, training, control of
12 costs, and various personnel and administrative functions.
13 I am also responsible for environmental matters and fuel
14 procurement.
15

16 Q. Mr. Cantrell, what is the objective of your testimony?
17

18 A. The objective of my testimony is to present the cost
19 associated with the conversion of four of Tampa Electric
20 Company's generating units from oil to coal. In addition,
21 I will sponsor the calculation of the operation and
22 maintenance expense differential and the determination of
23 fuel savings for the projection period and the projected
24 payoff period.
25

REVISED 02/09/95

1 Q. How does your testimony relate to the testimony of other
2 witnesses in this proceeding?

3
4 A. Ms. Elizabeth Townes is sponsoring the overall calculation
5 of the company's Oil Backout Cost Recovery Factor for the
6 period April 1995 - September 1995, as well as the
7 estimated payoff period for the total project. In these
8 calculations, Ms. Townes develops the basic revenue
9 requirements of the project using the actual cost of the
10 conversion assets, and my projection of the operation and
11 maintenance expense differential and the fuel savings
12 resulting from the conversion. Kilowatt-hour sales and
13 fuel costs are consistent with those used in the company's
14 fuel adjustment filing.

15
16 Q. Have you prepared documents in support of your testimony?

17
18 A. Yes. I have prepared portions of documents which are
19 included in a composite Exhibit No. (WNC/EAT-2) titled
20 "Schedules Supporting Oil Backout Cost Recovery Factor" and
21 Exhibit No. (WNC/EAT-3) titled "Comparison of Projected
22 Payoff with Original Estimate, as of November 1994." These
23 exhibits are being jointly sponsored by Ms. Townes and me.

24
25 Q. What is the status of the project?

REVISED 02/09/95

1 A. The conversion of Gannon units 1 through 4 from oil to coal
2 is complete. The units were placed into commercial service
3 as follows:

4		
5	Unit 1	October 6, 1985
6	Unit 2	May 23, 1985
7	Unit 3	July 12, 1984
8	Unit 4	November 7, 1983

9
10 Q. What is the cost of the Oil Backout assets which are
11 included in the cost recovery computation in this
12 proceeding?

13
14 A. The total cost of the conversion project to be recovered
15 through the Clause is \$140.5 million. No additional
16 expenditures are anticipated.

17
18 Q. What are the projected fuel savings which will occur as a
19 result of the operation of the converted Gannon units
20 during the projection period?

21
22 A. As shown on Line 4 of Document 1, total fuel savings
23 resulting from the project for the period April 1995 -
24 September 1995 are expected to be \$266,530. This amount is
25 based upon the difference in fuel expenses from production

REVISED 02/09/95

1 costing runs which simulate dispatch of all generating
2 units with and without the conversion of the Gannon units.
3 The assumptions for sales, unit ratings, heat rates, coal
4 and No. 6 oil prices and availability factors are
5 consistent with those used by the company in its fuel
6 adjustment filing in this docket.

7

8 Q. Have you calculated the projected operating and maintenance
9 expense differential of the project for April 1995 -
10 September 1995?

11

12 A. Yes, I have calculated the operation and maintenance
13 expense differential for this period to be \$2,057,435 as
14 shown on line 9 of Document 1.

15

16 Q. Please explain how the operation and maintenance expense
17 differential was calculated.

18

19 A. The operation and maintenance differential consists of the
20 oil/non-oil operating expense differential and other
21 projected costs resulting from the Oil Backout project.
22 This differential was calculated by applying a percentage
23 representing the increased operation and maintenance costs
24 associated with coal-firing to total projected operation
25 and maintenance expenses pertaining to the converted Gannon

16
17
18
19
20
21
22
23
24
25

units. The percentage was derived by comparing historical operation and maintenance costs for Gannon units 1-4 as oil-fired to historical operation and maintenance costs for Gannon units 5 and 6 as coal-fired. Specifically identifiable costs to be incurred to comply with the Oil Backout Cost Recovery Rule were added to the operating expense differential to derive the total operation and maintenance differential.

The operation and maintenance differential as shown on Exhibit No. (WNC/EAT-3) "Comparison of Projected Payoff with Original Estimate, as of November 1994," is now higher than the original estimate since the original estimate did not include maintaining the assets required for dual firing capability. In addition, the current estimate is based on more detailed engineering estimates and actual experience associated with the converted units.

Q. Mr. Cantrell, please explain the decrease in fuel savings indicated on the projected payoff exhibit.

A. The reduction in fuel savings is due to a decrease in the projected differential between the price of oil and the price of coal, and a decrease in the projected system energy requirements. The current estimate of fuel savings

15
16
17
18
19
20
21
22

24
25

REVISED 02/09/95

1 units. The percentage was derived by comparing historical
2 operation and maintenance costs for Gannon units 1-4 as
3 oil-fired to historical operation and maintenance costs for
4 Gannon units 5 and 6 as coal-fired. Specifically
5 identifiable costs to be incurred to comply with the Oil
6 Backout Cost Recovery Rule were added to the operating
7 expense differential to derive the total operation and
8 maintenance differential.

9
10 The operation and maintenance differential as shown on
11 Exhibit No. (WNC/EAT-3) "Comparison of Projected Payoff
12 with Original Estimate, as of November 1994," is now higher
13 than the original estimate since the original estimate did
14 not include maintaining the assets required for dual firing
15 capability. In addition, the current estimate is based on
16 more detailed engineering estimates and actual experience
17 associated with the converted units.

18
19 Q. Mr. Cantrell, please explain the decrease in fuel savings
20 indicated on the projected payoff exhibit.

21
22 A. The reduction in fuel savings is due to a decrease in the
23 projected differential between the price of oil and the
24 price of coal, and a decrease in the projected system
25 energy requirements. The current estimate of fuel savings

REVISED 02/09/95

1 is based on long-term fuel price and energy projections
2 prepared in conjunction with this current fuel adjustment
3 clause filing.
4

5 Q. Does this conclude your testimony?
6

7 A. Yes.

DOCKET NO. 940001-EI
TAMPA ELECTRIC COMPANY
SUBMITTED FOR FILING 11/14/94
(TRUE UP)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION
PREPARED DIRECT TESTIMONY
OF
GEORGE A. KESELOWSKY

Q. Will you please state your name, business address, and employer?

A. My name is George A. Keselowsky and my business address is Post Office Box 111, Tampa, Florida 33601. I am employed by Tampa Electric Company.

Q. Please furnish us with a brief outline of your educational background and business experience.

A. I graduated in 1972 from the University of South Florida with a Bachelor of Science Degree in Mechanical Engineering. I have been employed by Tampa Electric Company in various engineering positions since that time. My current position is that of Senior Consulting Engineer - Production Engineering.

1 Q. What are your current responsibilities?

2

3 A. I am responsible for testing and reporting unit performance, and the compilation
4 and reporting of generation statistics.

5

6 Q. What is the purpose of your testimony?

7

8 A. My testimony presents the actual performance results from unit equivalent
9 availability and station heat rate used to determine the Generating Performance
10 Incentive Factor (GPIF) for the period April 1994 through September 1994. I will
11 also compare these results to the targets established prior to the beginning of the
12 period.

13

14 Q. Have you prepared an exhibit with the results for this six month period?

15

16 A. Yes. Under my direction and supervision an exhibit has been prepared entitled,
17 "Tampa Electric Company, April 1994 - September 1994, Generating Performance
18 Incentive Factor Results" consisting of 28 pages that was filed with this testimony
19 (Have identified as Exhibit GAK-1).

20

21 Q. Have you calculated the results of Tampa Electric Company for its performance
22 under the GPIF during this period?

23

24 A. Yes I have. This is shown on page 4 of my exhibit. Based upon +0.788 GPIF
25 points, the result is a reward amount of \$146,321 for the period.

- 1 Q. Please proceed with your review of the actual results for the April 1994 -
2 September 1994 period.
3
- 4 A. On page 3 of my exhibit, the actual average common equity for the period is shown
5 on line 8 as \$918,569,094. This produces the maximum penalty or reward figure
6 of \$1,856,865 as shown on line 15, page 3, and also on page 2 of my exhibit.
7
- 8 Q. Would you please explain how you arrived at the actual equivalent availability
9 results for the six units included within the GPIF?
10
- 11 A. Yes I will. Operating data on each of our operating units is filed monthly with the
12 Florida Public Service Commission on the Actual Unit Performance data form.
13 Additionally, outage information is reported to the Commission on a monthly basis.
14 A summary of this data for the six months provides the basis for the GPIF.
15
- 16 Q. Are the equivalent availability results shown on page 6, column 2, directly
17 applicable to the GPIF table?
18
- 19 A. Not exactly. Adjustments to equivalent availability may be required as noted in
20 section 4.3.3 of the GPIF Manual. The actual equivalent availability including the
21 required adjustment is shown on page 6 of my exhibit.
22
- 23 The necessary adjustments as prescribed in the GPIF Manual are further defined
24 by a letter dated October 23, 1981, from Mr. J.H. Hoffsis of the Commission's
25 Staff. The adjustments for each unit are as follows:

1 Gannon Unit No. 5

2
3 On this unit, 192 planned outage hours were originally scheduled to fall within the
4 Summer 1994 period. The actual planned outage activities required 120.6 hours.
5 Consequently, the actual equivalent availability of 85.4% is adjusted to 83.9% as
6 shown on page 7 of my exhibit.

7
8 Gannon Unit No. 6

9
10 This unit was not scheduled to have a planned outage during the Summer 1994
11 period, and did not in fact have one. Consequently, the actual equivalent
12 availability of 90.7% requires no adjustment, as shown on page 8 of my exhibit.

13
14 Big Bend Unit No. 1

15
16 On this unit, 1,344 planned outage hours were originally scheduled to fall within
17 the Summer 1994 period. The actual planned outage activities required 1,342.6
18 hours. Since the actual hours were nearly identical to the planned hours, the
19 adjustment process produced a change only beyond the first decimal point.
20 Consequently, the actual equivalent availability of 59.1% remains 59.1% after
21 adjustment as shown on page 9 of my exhibit.

1 Big Bend Unit No. 2

2
3 This unit was not scheduled to have a planned outage during the Summer 1994
4 period, and did not in fact have one. Consequently, the actual equivalent
5 availability of 79.2% requires no adjustment as shown on page 10 of my exhibit.
6

7 Big Bend Unit No. 3

8
9 This unit was not scheduled to have a planned outage during the Summer 1994
10 period, and did not in fact have one. Consequently, the actual equivalent
11 availability of 90.9% requires no adjustment as shown on page 11 of my exhibit.
12

13 Big Bend Unit No. 4

14
15 This unit was not scheduled to have a planned outage the Summer 1994 period, and
16 did not in fact have one. Consequently, the actual equivalent availability of 92.6%
17 requires no adjustment as shown on page 12 of my exhibit.
18

19 Q. How did you arrive at the applicable equivalent availability points for each unit?
20

21 A. The final adjusted equivalent availabilities for each unit are shown on page 6,
22 column 4, of my exhibit. This number is entered into the respective Generating
23 Performance Incentive Point (GPIP) Table for each particular unit on pages 21
24 through 26. Page 4 of my exhibit summarizes the equivalent availability points to
25 be awarded or penalized.

- 1 Q. Would you please explain the heat rate results relative to the GPIF?
2
- 3 A. The actual heat rate and adjusted actual heat rate for Gannon and Big Bend Station
4 are shown on page 6 of my exhibit. The adjustment was developed based on the
5 guidelines of section 4.3.6 of the GPIF Manual. This procedure is further defined
6 by a letter dated October 23, 1981, from Mr. J.H. Hoffsis of the FPSC Staff. The
7 final adjusted actual heat rates are also shown on page 5 of my exhibit. This heat
8 rate number is entered into the respective GPIF table for the particular unit, shown
9 on pages 21 through 26. Page 4 of my exhibit summarizes the weighted heat rate
10 and equivalent availability points to be awarded.
11
- 12 Q. What is the overall GPIF for Tampa Electric Company during this six month
13 period?
14
- 15 A. This is shown on page 28 of my exhibit. Essentially, the weighing factors shown
16 on page 4, column 3, plus the equivalent availability points and the heat rate points
17 shown on page 4, column 4, are substituted within the equation. This resultant
18 value, +0.788, is then entered into the GPIF table on page 2. Using linear
19 interpolation, a reward amount of \$146,321 is calculated.
20
- 21 Q. Does this conclude your testimony?
22
- 23 A. Yes, it does.

DOCKET NO. 950001-EI
TAMPA ELECTRIC COMPANY
SUBMITTED FOR FILING 1/17/95
(PROJECTION)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION
PREPARED DIRECT TESTIMONY
OF
GEORGE A. KESELOWSKY

Q. Will you please state your name, business address, and employer?

A. My name is George A. Keselowsky and my business address is Post Office Box 111, Tampa, Florida 33601. I am employed by Tampa Electric Company.

Q. Please furnish us with a brief outline of your educational background and business experience.

A. I graduated in 1972 from the University of South Florida with a Bachelor of Science Degree in Mechanical Engineering. I have been employed by Tampa Electric Company in various engineering positions since that time. My current position is that of Senior Consulting Engineer - Production Engineering.

- 1 Q. What are your current responsibilities?
- 2
- 3 A. I am responsible for testing and reporting unit performance, and the compilation
- 4 and reporting of generation statistics.
- 5
- 6 Q. What is the purpose of your testimony?
- 7
- 8 A. My testimony presents Tampa Electric Company's methodology for determining
- 9 the various factors required to compute the Generating Performance Incentive
- 10 Factor (GPIF) as ordered by this Commission.
- 11
- 12 Q. Have you prepared an exhibit showing the various elements of the derivation of
- 13 Tampa Electric Company's GPIF formula?
- 14
- 15 A. Yes, I have prepared, under my direction and supervision, an exhibit entitled
- 16 "Tampa Electric Company, Generating Performance Incentive Factor" April 1995
- 17 - September 1995, consisting of 35 pages filed with the Commission on
- 18 January 17, 1994. (Have identified as Exhibit GAK-2). The data prepared within
- 19 this exhibit is consistent with the GPIF Implementation Manual previously
- 20 approved by this Commission.
- 21
- 22 Q. Which generating units on Tampa Electric Company's system are included in the
- 23 determination of your GPIF?
- 24
- 25 A. Six of our coal-fired units are included. These are: Gannon Station Units 5 and

1 6; and Big Bend Station Units 1, 2, 3, and 4.

2

3

Q. Will you describe how Tampa Electric Company evolved the various factors associated with the GPIF as ordered by this Commission?

4

5

6

A. Yes. First, the two factors to be used, as set forth by the Commission Staff, are unit availability and station heat rate.

7

8

9

Q. Please continue.

10

11

A. A target was established for equivalent availability for each unit considered for this period. Heat rate targets were also established for each unit. A range of potential improvement and degradation was determined for each of these parameters.

12

13

14

15

16

Q. Would you describe how the target values for unit availability were determined?

17

18

A. Yes I will. The Planned Outage Factor (POF) and the Equivalent Unplanned Outage Factor (EUOF) were subtracted from 100% to determine the target equivalent availability. The factors for each of the 6 units included within the GPIF are shown on page 5 of my exhibit. For example, the projected EUOF for Gannon Unit Six is 14.1%. The Planned Outage Factor for this same unit during this period is 5.5%. Therefore, the target equivalent availability for this unit equals:

19

20

21

22

23

24

25

1 $100\% - [(14.1\% + 5.5\%)] = 80.4\%$

2

3 This is shown on page 4, column 3 of my exhibit.

4

5 Q. How was the potential for unit availability improvement determined?

6

7 A. Maximum equivalent availability is arrived at using the following formula.

8 Equivalent Availability Maximum

9 $EA_{MAX} = 100\% - [0.8 (EUOF_T) + 0.95 (POF_T)]$

10

11 The factors included in the above equations are the same factors that determine
12 target equivalent availability. To attain the maximum incentive points, a 20%
13 reduction in Forced Outage and Maintenance Outage Factors (EUOF), plus a 5%
14 reduction in the Planned Outage Factor (POF) will be necessary. Continuing with
15 our example on Gannon Unit Six:

16

17 $EA_{MAX} = 100\% - [0.8 (14.1\%) + 0.95 (5.5\%)] = 83.5\%$

18

19 This is shown on page 4, column 4 of my exhibit.

20

21 Q. How was the potential for unit availability degradation determined?

22

23 A. The potential for unit availability degradation is significantly greater than is the
24 potential for unit availability improvement. This concept was discussed
25 extensively and approved in earlier hearings before this Commission. Tampa

1 Electric Company's approach to incorporating this skewed effect into the unit
 2 availability tables is to use a potential degradation range equal to twice the
 3 potential improvement. Consequently, minimum equivalent availability is arrived
 4 at via the following formula:

5
 6 Equivalent Availability Minimum

7
$$EAF_{MIN} = 100\% - [1.4 (EUOF_T) + 1.10 (POF_T)]$$

8
 9 Again, continuing with our example of Gannon Unit Five,

10
 11
$$EAF_{MIN} = 100\% - [1.4 (14.1\%) + 1.1 (5.5\%)] = 74.2\%$$

12
 13 Equivalent availability MAX and MIN for the other five units is computed in a
 14 similar manner.

15
 16 Q. How do you arrive at the Planned Outage, Maintenance Outage and Forced
 17 Outage Factors?

18
 19 A. Our planned outages for this period are shown on page 19 of my exhibit. A
 20 Critical Path Method (C.P.M.) for each outage greater than two weeks which
 21 affects GPIF is included in my exhibit. For example, Big Bend Unit 3 is
 22 scheduled for a major unit inspection from April 5 to May 16, 1995. There are
 23 1008 planned outage hours scheduled for the summer 1995 period, and a total of
 24 4391 hours during this 6 month period. Consequently, the Planned Outage Factor
 25 for Unit 3 at Big Bend is $1008/4391 \times 100\%$ or 23.0%. This factor is shown on

1
2

16
17
18
19
20
21
22
23
24
25

pages 5 and 17 of my exhibit. Big Bend Units 2 and 4, as well as Gannon Unit 5 have planned outage factors of zero. Gannon Unit 6 has a planned outage factor of 5.5% and Big Bend Unit 1 has a planned outage factor of 1.1%.

Q. How did you arrive at the Forced Outage and Maintenance Outage Factors on each unit?

A. Graphs of both of these factors (adjusted for planned outages) vs. time are prepared. Both monthly data and 12 month moving average data are recorded. For each unit the most current, September 1994, 12 month ending value was used as a basis for the projection. This value was adjusted up or down by analyzing trends and causes for recent forced and maintenance outages. All projected factors are based upon historical unit performance, engineering judgment, time since last planned outage, and equipment performance resulting in a forced or maintenance outage. These target factors are additive and result in a EUOF of 11.3% for Gannon Unit Five. The Equivalent Unplanned Outage Factor (EUOF) for Gannon Unit Five is verified by the data shown on page 13, lines 3, 5, 10 and 11 of my exhibit and calculated using the formula:

$$EUOF = \frac{(FOH + EFOH + MOH + EMOH)}{\text{Period Hours}} \times 100$$

or

$$EUOF = \frac{(439 + 57)}{4391} \times 100 = 11.3\%$$

Relative to Gannon Unit Five, the EUOF of 11.3% forms the basis of our

1 Equivalent Availability target development as shown on sheets 4 and 5 of my
2 exhibit.

3
4 Q. Please continue with your review of the remaining units.

5
6 Big Bend Unit One

7 A. The projected EUOF for this unit is 15.5% during this period. This unit will
8 have a planned outage which is scheduled to end early in this period, and the
9 Planned Outage Factor is 1.1%. This results in a target equivalent availability of
10 83.4% for the period.

11
12 Big Bend Unit Two

13 The projected EUOF for this unit is 11.9%. This unit will not have a planned
14 outage during this period and the Planned Outage Factor is 0.0%. Therefore, the
15 target equivalent availability for this unit is 88.1%.

16
17 Big Bend Unit Three

18 The projected EUOF for this unit is 9.9% during this period. This unit will have
19 a planned outage this period and the Planned Outage Factor is 23.0%. Therefore,
20 the target equivalent availability for this unit is 67.1%.

21
22 Big Bend Unit Four

23 The projected EUOF for this unit is 9.4%. This unit will not have a planned
24 outage during this period and the Planned Outage Factor is 0.0%. This results
25 in a target equivalent availability of 90.6% for the period.

Gannon Unit Five

1
2 The projected EUOF for this unit is 11.3%. This unit will not have a planned
3 outage during this period and the Planned Outage Factor is 0.0%. Therefore, the
4 target equivalent availability for this unit is 88.7%.

5
6 Gannon Unit Six

7 The projected EUOF for this unit is 14.1%. This unit will have a planned outage
8 during this period and the Planned Outage Factor is 5.5%. Therefore, the target
9 equivalent availability for this unit is 80.4%.

10
11 Q. Would you summarize your testimony regarding Equivalent Availability Factor
12 (EAF), Equivalent Unplanned Outage Factor (EUOF) and Equivalent Unplanned
13 Outage Rate (EUOR)?

14
15 A. Yes I will. Please note on page 5 that the GPIF system weighted Equivalent
16 Availability Factor (EAF) equals 82.3%. This target compares very favorably to
17 previous GPIF periods in that it is better than three of the five previous periods,
18 as well as the five period average EAF. The system weighted Equivalent
19 Unplanned Outage Rate (EUOR) equals 12.9%. This target is also worthy of
20 note. It is within 0.4% of being better or equal to the EUOR of four of the five
21 previous periods. These targets represent an outstanding level of performance for
22 our system.
23

- 1 Q. As you graph and monitor Forced and Maintenance Outage Factors, why are they
2 adjusted for planned outage hours?
3
- 4 A. This adjustment makes these factors more accurate and comparable. Obviously,
5 a unit in a planned outage stage or reserve shutdown stage will not incur a forced
6 or maintenance outage. Since our units are usually base loaded, reserve shutdown
7 is generally not a factor. To demonstrate the effects of a planned outage, note the
8 EUOR and EUOF for Gannon Unit Six on page 14. During the month of April
9 and for June through September, EUOF and EUOR are equal. This is due to the
10 fact that no planned outages are scheduled during these months. During the
11 month of May, EUOR exceeds EUOF. The reason for this difference is the
12 scheduling of a planned outage. The adjusted factors apply to the period hours
13 after planned outage hours have been extracted.
14
- 15 Q. Does this mean that both rate and factor data are used in calculated data?
16
- 17 A. Yes it does. Rates provide a proper and accurate method of arriving at the unit
18 parameters. These are then converted to factors since they are directly additive.
19 That is, the Forced Outage Factor + Maintenance Outage Factor + Planned
20 Outage Factor + Equivalent Availability = 100%. Since factors are additive,
21 they are easier to work with and to understand.
22

1 Q. You previously stated that you had developed a CPM for your unit outages. How
2 do you use the CPM in conjunction with your planned outages?

3
4 A. The CPM's included in this exhibit are preliminary and include only the major
5 work activities we expect to accomplish during the planned outage. Planned
6 outages are very complex and are anticipated months in advance. The actual
7 CPM's utilized in the execution of the planned outage are detailed for all major
8 and minor work activities.

9
10 Since it is important to the company and beneficial to our Customers to control
11 outage length, we have implemented a computerized outage management system.
12 Essentially, this tool enables management to monitor outage progress, measure
13 activity results against previously established milestones, and verify timely
14 execution of all critical path events. This results in the shortest outage time
15 possible and the maximum utilization of all resources. Any reduction in planned
16 outage length directly improves unit equivalent availability.

17
18 Q. Has Tampa Electric Company prepared the necessary heat rate data required for
19 the determination of the Generating Performance Incentive Factor?

20
21 A. Yes. Target heat rates as well as ranges of potential operation have been
22 developed as required.
23

1 Q. On what basis were the heat rate targets determined?

2

3 A. Average net operating heat rates are determined and reported on a unit basis.
4 Therefore, all heat rate data pertaining to the GPIF is calculated on this basis.

5

6 Q. How were these targets determined?

7

8 A. Net heat rate data for the three most recent winter periods, along with the
9 PROMOD III program, formed the basis of our target development. Projections
10 of unit performance were made with the aid of PROMOD III. The historical data
11 and the target values are analyzed to assure applicability to current conditions of
12 operation. This provides assurance that any periods of abnormal operations, or
13 equipment modifications having material effect on heat rate can be taken into
14 consideration.

15

16 Q. Have you developed the heat rate targets in accordance with GPIF guidelines?

17

18 A. Yes.

19

20 Q. How were the ranges of heat rate improvement and heat rate degradation
21 determined?

22

23 A. The ranges were determined through analysis of historical net heat rate and net
24 output factor data. This is the same data from which the net heat rate vs. net
25 output factor curves have been developed for each station. This information is

1 shown on pages 27 through 32 of my exhibit.

2

3 Q. Would you elaborate on the analysis used in the determination of the ranges?

4

5 A. The net heat rate vs. net output factor curves are the results of a first order curve
6 fit to historical data. The standard error of the estimate of this data was
7 determined, and a factor was applied to produce a band of potential improvement
8 and degradation. Both the curve fit and the standard error of the estimate were
9 performed by computer program for each station. These curves are also used in
10 post period adjustments to actual heat rates to account for unanticipated changes
11 in unit dispatch.

12

13 Q. Can you summarize your heat rate projection for the summer 1995 period?

14

15 A. Yes. The heat rate target for Big Bend Unit 1 is 10,137 Btu/Net kwh. The range
16 about this value, to allow for potential improvement or degradation, is
17 ± 314 Btu/Net kwh. The heat rate target for Big Bend Unit 2 is 10,055 Btu/Net
18 kwh with a range of ± 353 Btu/Net kwh. The heat rate target for Big Bend
19 Unit 3 is 9,607 Btu/Net kwh, with a range of ± 320 Btu/Net kwh. The heat rate
20 target for Big Bend Unit 4 is 10,036 Btu/Net kwh with a range of ± 279 Btu/Net
21 kwh. The heat rate target for Gannon Unit 5 is 10,052 Btu/Net kwh with a range
22 of ± 326 Btu/Net kwh. The heat rate target for Gannon Unit 6 is 10,335 Btu/Net
23 kwh with a range of ± 412 Btu/Net kwh. A zone of tolerance of ± 75 Btu/Net
24 kwh is included within the range for each target. This is shown on page 4, and
25 pages 7 through 12 of my exhibit.

1 Q. Do you feel that the heat rate targets and ranges in your projection meet the
2 criteria of the GPIF and the philosophy of this Commission?

3
4 A. Yes I do.

5
6 Q. After determining the target values and ranges for average net operating heat rate
7 and equivalent availability, what is the next step in the GPIF?

8
9 A. The next step is to calculate the savings and weighing factor to be used for both
10 average net operating heat rate and equivalent availability. This is shown on pages
11 7 through 12. Our PROMOD III cost simulation model was used to calculate the
12 total system fuel cost if all units operated at target heat rate and target availability
13 for the period. This total system fuel cost of \$136,669,300 is shown on page 6
14 column 2.

15
16 The PROMOD III output was then used to calculate total system fuel cost with
17 each unit individually operating at maximum improvement in equivalent
18 availability and each station operating at maximum improvement in average net
19 operating heat rate. The respective savings are shown on page 6 column 4. After
20 all the individual savings are calculated, column 4 is totaled: \$5,848,700 reflects
21 the savings if all units operated at maximum improvement. A weighting factor
22 for each parameter is then calculated by dividing individual savings by the total.
23 For Big Bend Unit One, the weighting factor for equivalent availability is 8.22%
24 as shown in the right hand column on page 6. Pages 7 thru 12 show the point
25 table, the Fuel Savings/(Loss), and the equivalent availability or heat rate value.

1 The individual weighting factor is also shown. For example, on Big Bend Unit
2 One, page 9, if the unit operates at 86.5% equivalent availability, fuel savings
3 would equal \$480,700 and 10 equivalent availability points would be awarded.
4

5 The Generating Performance Incentive Factor Reward/Penalty Table on page 2
6 is a summary of the tables on pages 7 through 12. The left hand column of this
7 document shows the Tampa Electric Company's incentive points. The center
8 column shows the total fuel savings and is the same amount as shown on page 6,
9 column 4, \$5,848,700. The right hand column of page 2 is the estimated reward
10 or penalty based upon performance.
11

12 Q. How were the maximum allowed incentive dollars determined?
13

14 A. Referring to my exhibit on page 3, line 8, the estimated average common equity
15 for the period April 1995 - September 1995 is shown to be \$993,746,714. This
16 produces the maximum allowed jurisdictional incentive dollars of \$2,015,317
17 shown on line 15.
18

19 Q. Is there any other constraint set forth by this Commission regarding the magnitude
20 of incentive dollars?
21

22 A. Yes. Incentive dollars are not to exceed fifty percent of fuel savings. Page 2 of
23 my exhibit demonstrates that this constraint is met.
24
25

1 Q. Do you wish to summarize your testimony on the GPIF?

2

3 A. Yes. To the best of my knowledge and understanding, Tampa Electric Company
4 has fully complied with the Commission's directions, philosophy, and
5 methodology in our determination of Generating Performance Incentive Factor.
6 The GPIF for Tampa Electric Company is expressed by the following formula for
7 calculating Generating Performance Incentive Points (GPIF):

$$\begin{aligned}
8 \text{ GPIF} = & (0.0285 \text{ EAP}_{\text{GN5}} + 0.0611 \text{ EAP}_{\text{GN6}} \\
9 & + 0.0822 \text{ EAP}_{\text{BB1}} + 0.0766 \text{ EAP}_{\text{BB2}} \\
10 & + 0.0785 \text{ EAP}_{\text{BB3}} + 0.0689 \text{ EAP}_{\text{BB4}} \\
11 & + 0.0570 \text{ HRP}_{\text{GN5}} + 0.1120 \text{ HRP}_{\text{GN6}} \\
12 & + 0.1096 \text{ HRP}_{\text{BB1}} + 0.1282 \text{ HRP}_{\text{BB2}} \\
13 & + 0.0902 \text{ HRP}_{\text{BB3}} + 0.1072 \text{ HRP}_{\text{BB4}})
\end{aligned}$$

14 Where:

15 GPIF = Generating performance incentive points.

16 EAP = Equivalent availability points awarded/deducted for
17 Units 5 and 6 at Gannon and Units 1, 2, 3 and 4 at Big Bend.

18 HRP = Average net heat rate points awarded/deducted for Units 5
19 and 6 at Gannon and Units 1, 2, 3 and 4 at Big Bend.

20

21 Q. Have you prepared a document summarizing the GPIF targets for the April 1995
22 - September 1995 period?

23

24 A. Yes. The availability and heat rate targets for each unit are listed on attachment
25 "A" to this testimony entitled "Tampa Electric Company GPIF Targets, April 1,

1 1995 - September 30, 1995".

2

3 Q. Do you wish to sponsor an exhibit consisting of estimated unit performance data
4 supporting the fuel adjustment?

5

6 A. Yes I do. (Have identified as Exhibit GAK-3).

7

8 Q. Briefly describe this exhibit.

9

10 A. This exhibit consists of 22 pages. This data is Tampa Electric Company's
11 estimate of the Unit Performance Data and Unit Outage Data for the April 1995
12 - September 1995 period.

13

14 Q. Does this conclude your testimony?

15

16 A. Yes.

1 **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**
2 **PREPARED DIRECT TESTIMONY**
3 **OF**
4 **MARY JO PENNINO**

5
6 **Q.** Please state your name, address, occupation and employer.

7
8 **A.** My name is Mary Jo Pennino. My business address is 702
9 North Franklin Street, Tampa, Florida 33602. I am
10 Administrator - Wholesale and Fuel in the Regulatory
11 Affairs Department of Tampa Electric Company.

12
13 **Q.** Please provide a brief outline of your educational
14 background and business experience.

15
16 **A.** I received a Bachelor of Science Degree in Chemical
17 Engineering from the University of South Florida, Tampa,
18 Florida in 1985. Upon graduation, I began my career at
19 Tampa Electric Company in the Production Department. My
20 responsibilities included heat rate testing, support
21 services for the Plant Chemical Engineers, and start-up
22 assistance for Hookers Point Station. In 1991, I
23 transferred to the Generation Planning Department where I
24 was responsible for annual expansion planning analyses,
25 alternative technology evaluation and several other

1 business planning activities. In 1993, I was promoted to
 2 Administrator - Wholesale and Fuel in the Regulatory
 3 Affairs Department. My present responsibilities include
 4 the areas of fuel adjustment filings, capacity cost
 5 recovery filings, and rate design.

6
 7 Q. What is the purpose of your testimony in this proceeding?

8
 9 A. The purpose of my testimony is to present the net true-up
 10 amounts for the April 1994 through September 1994 period
 11 for both the Fuel Cost Recovery and the Capacity Cost
 12 Recovery Clauses.

13
 14 **FUEL COST RECOVERY CLAUSE**

15
 16 Q. What is the net true-up amount for the fuel cost recovery
 17 clause for the period April 1994 through September 1994.

18
 19 A. An over/(under) - recovery of \$3,968,565. The actual fuel
 20 cost over/(under) - recovery, including interest, is
 21 (\$858,518) for the period April 1994 through September 1994
 22 (Schedule A2, page 3 of 4, of September 1994 monthly
 23 filing, in Document No. 4, reflects an end of period total
 24 net true-up of \$4,920,706. Subtracting the beginning of
 25 period deferred true-up of \$5,779,224 yields the

1 (\$858,518). This (\$858,518) amount, less the
2 actual/estimated over/(under) - recovery approved in the
3 August 1994 fuel hearings of (\$4,827,083) results in a
4 final over/(under) - recovery for the period of \$3,968,565
5 (the estimated end of period total net true-up of \$952,141
6 minus the above mentioned beginning of period deferred
7 true-up of \$5,779,224 yields the (\$4,827,083)). This
8 over/(under) - recovery amount of \$3,968,565 will be
9 carried over and applied in the calculation of the fuel
10 recovery factor for the period April 1995 through September
11 1995.

12
13 Q. How much effect will this \$3,968,565 over/(under) -
14 recovery in the April 1994 through September 1994 period,
15 have on the April 1995 through September 1995 period?
16

17 A. The \$3,968,565 over/(under) - recovery will cause a 1,000
18 KWH residential bill to be approximately \$0.52 lower.
19

20 Q. Have you prepared an Exhibit in this proceeding?
21

22 A. Yes. Exhibit No. (MJP-1, Fuel Cost Recovery and Capacity
23 Cost Recovery) which contains four documents. Document No.
24 3 is used to explain the capacity cost recovery clause
25 which is discussed later in my testimony. Document No. 4

1 contains Commission Schedules A-1 through A-12 for the
2 months of April 1994 through September 1994. Included with
3 the September 1994 monthly filing is a six months summary
4 for each of Commission Schedules A7, A7A, A8, A8a, A9, and
5 A10, for the period April 1994 through September 1994.
6

7 Q. Please explain Document No. 1.
8

9 A. Document No. 1, entitled "Tampa Electric Company Final Fuel
10 Over/(Under) - Recovery for the period April 1994 through
11 September 1994" shows the calculation of the final fuel
12 over/(under) - recovery for the period of \$3,968,565 which
13 will be applied to jurisdictional sales during the period
14 April 1995 through September 1995.
15

16 Line 1 shows the total company fuel costs of \$186,559,148
17 for the period April 1994 through September 1994. The
18 jurisdictional amount of total fuel costs is \$185,225,297
19 as shown on line 2. This amount is compared to the
20 jurisdictional fuel revenues applicable to the period on
21 line 3 to obtain the actual over/(under) - recovered fuel
22 costs for the period, shown on line 4. The resulting
23 (\$867,200) over/(under) - recovered fuel costs for the
24 period, combined with \$8,682 of interest shown on line 5,
25 constitute the actual over/(under) - recovery of (\$858,518)

1 shown on line 6. The (\$858,518) less the actual/estimated
 2 over/(under) - recovery of (\$4,827,083) shown on line 7,
 3 which was approved in the August 1994 fuel hearings,
 4 results in the final over/(under) - recovery of \$3,968,565
 5 shown on line 8.

6
 7 Fuel rates were adjusted down in July 1994 as a result of
 8 a mid course correction. Estimated over recovery without
 9 the mid course correction would have been approximately
 10 \$16.5 million higher (3,920,633 MWH for July - September
 11 1994 times the difference in the fuel cost factor - 2.894
 12 less 2.473).

13
 14 Q. What does Document No. 2 show?

15
 16 A. Document No. 2, entitled "Tampa Electric Company
 17 Calculation of True-Up Amount Actual vs. Original Estimates
 18 for the period April 1994 through September 1994," shows
 19 the calculation of the actual over/(under) - recovery as
 20 compared to the original estimate for the same period.

21
 22 Q. What was the variance in jurisdictional fuel revenues for
 23 the period April 1994 through September 1994?

24
 25 A. As shown on line D1 of my Document No. 2, the company

1 collected \$929,561 or 0.5% more jurisdictional fuel
2 revenues than originally estimated.

3

4 Q. What was the total fuel and net power transaction cost
5 variance for the period April 1994 through September 1994?

6

7 A. As shown on line A7 of Document No. 2, the fuel and net
8 power transactions cost variance is (\$3,470,134) or (1.8%).

9

10 Q. What are the reasons for the total fuel and net power
11 transactions cost being lower by (\$3,470,134) or (1.8%)?

12

13 A. Although sales variance was 7,505,793 MWH minus 7,420,960
14 MWH, or up 84,833 MWH, unbilled sales, company use and T&D
15 losses, as a group, were less than anticipated by (153,717)
16 MWH or (25.8%). The combined result is that Net Energy for
17 Load was down (68,884) MWH or (0.9%). This (0.9%),
18 combined with the ¢/KWH cost for Total Fuel and Net Power
19 Transaction being less than estimated by (1.0%), accounts
20 for the (1.8%) variance.

21

22 **CAPACITY COST RECOVERY CLAUSE**

23

24 Q. What is the net true-up amount for the capacity cost
25 recovery clause for the period April 1994 through September

1 1994?

2

3 A. An over/(under) - recovery of (\$35,650). The actual
 4 capacity cost over/(under) - recovery, including interest,
 5 is \$1,568,922 for the period April 1994 through September
 6 1994 (Document No. 3, pages 2 and 3 of 5). This amount,
 7 less the actual/estimated over/(under) - recovery approved
 8 in the August 1994 fuel hearings of \$1,604,572 results in
 9 a final over/(under) - recovery for the period of (\$35,650)
 10 (Document No. 3, page 5 of 5). This over/(under) -
 11 recovery amount of (\$35,650) will be carried over and
 12 applied in the calculation of the capacity cost recovery
 13 factor for the period April 1995 through September 1995.

14

15 Q. How much effect will this (\$35,650) over/(under) - recovery
 16 in the April 1994 through September 1994 period, have on
 17 the April 1995 through September 1995 period?

18

19 A. The (\$35,650) over/(under) - recovery will be less than a
 20 \$.005 increase in a 1,000 KWH residential bill.

21

22 Q. Does this conclude your testimony?

23

24 A. Yes.

1 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2 PREPARED DIRECT TESTIMONY

3 OF

4 MARY JO PENNINO

5
6 Q. Please state your name, address, occupation and employer.

7
8 A. My name is Mary Jo Pennino. My business address is 702
9 North Franklin Street, Tampa, Florida 33602. My title is
10 Administrator - Wholesale and Fuel. I work in the
11 Regulatory Affairs Department of Tampa Electric Company.

12
13 Q. Please provide a brief outline of your educational
14 background and business experience.

15
16 A. I was educated in both public and private schools in
17 Illinois and received a Bachelor of Science Degree in
18 Chemical Engineering from the University of South Florida,
19 Tampa, Florida in 1985. Upon graduation, I began my career
20 with Tampa Electric in the Production Department. My
21 responsibilities included heat rate testing, support
22 service for the Plant Chemical Engineers, and start-up
23 engineering for Hookers Point Station. In 1991, I
24 transferred to the Generation Planning Department where I
25 was responsible for annual expansion planning analyses.

1 alternative technology evaluation and several other
2 business planning activities. In 1993, I was promoted to
3 my current position as Administrator in the Regulatory
4 Affairs Department. My present responsibilities include
5 the areas of fuel adjustment filings, capacity cost
6 recovery filings, and rate design.

7
8 Q. What is the purpose of your testimony in this proceeding?

9
10 A. The purpose of my testimony is twofold. First, I would
11 like to present to the Commission the proposed Total Fuel
12 and Purchased Power Cost Recovery factors for the period of
13 April - September 1995, and the proposed Capacity Cost
14 Recovery factors for the same period. Second, I would like
15 to provide the Commission with a description of Tampa
16 Electric's various types of off-system sales and an
17 explanation of the treatment of the revenues received from
18 wholesale sales. In addition, I will present reasons why
19 this treatment is appropriate and fair to both retail
20 ratepayers and Tampa Electric Company.

21
22 Fuel and Purchased Power Cost Recovery Factors / Capacity Cost
23 Recovery Clause

24
25 Q. Did you review the projected data necessary to calculate

1 period April - September 1995?

2

3 A. Yes.

4

5 Q. What is the proper value for the new period?

6

7 A. The proper value for the new period is 2.386 cents per kwh
8 before the application of the factors that adjust for
9 variations in line losses.

10

11 Q. Please describe the information provided on Schedule E-1C.

12

13 A. The GPIF and True-up factors are provided on Schedule E-1C.
14 We propose that a GPIF reward of \$146,321 be included in
15 the projection period. The True-up amount for the October
16 1994 - March 1995 period is an overrecovery of \$6,423,678.
17 This overrecovery is comprised of a final True-up
18 overrecovery amount of \$3,968,565 for the April 1994 -
19 September 1994 period and an estimated overrecovery in the
20 amount of 2,455,113 for the October 1994 - March 1995
21 period.

22

23 Q. Please describe the information provided on Schedule E-1D.

24

25 A. Schedule E-1D presents the company's on-peak and off-peak

1 fuel charge factors for the April - September 1995 period.

2

3 Q. What is the purpose of Schedule E-1E?

4

5 A. The purpose of Schedule E-1E is to present the standard,
6 on-peak and off-peak fuel charge factors after adjusting
7 for variations in line losses.

8

9 Q. Please recap the proposed Fuel and Purchased Power Cost
10 Recovery factors for the April - September 1995 period.

11

12 A.

Fuel Charge

13 Rate Schedule

Factor (cents per kwh)

14

25

2.080 (off-peak)

- 1 Q. How does Tampa Electric Company's proposed average fuel
2 charge factor of 2.386 cents per kwh compare to the average
3 fuel charge factor for the October 1994- March 1995 period?
4
- 5 A. The proposed fuel charge factor is 0.033 cents per kwh (or
6 33 cents per 1000 kwh) higher than the average fuel charge
7 factor of 2.353 cents per kwh for the October 1994 - March
8 1995 period.
9
- 10 Q. Please explain.
11
- 12 A. The slight increase in fuel and purchased power expense is
13 primarily due to Phase 1 compliance coal costs and
14 increased heat rates and purchased power expense typically
15 associated with the summer fuel adjustment period. The
16 projected increase has been mitigated through the effective
17 administration of both the Peabody and Gatliff coal
18 contracts. Tampa Electric has negotiated significant
19 changes in both of these contracts that provide significant
20 benefits to its Customers. In the case of the Peabody
21 contract, Tampa Electric has effected a buy-out of this
22 agreement that will yield estimated net benefits to
23 Customers of 2.5 million dollars in 1995 and 29 million
24 dollars (present value) over the period 1995 - 2004. In
25 the case of the Gatliff contract, Tampa Electric has

1 negotiated, for 1995, a lower contract minimum (1.5 million
 2 tons) and a price reduction (\$0.85 per ton reduction).
 3 Replacement coal for the Gatliff coal will be purchased at
 4 competitive spot prices. These changes are the result of
 5 significant efforts on the part of Tampa Electric to
 6 negotiate these changes and extensive test burn efforts at
 7 Tampa Electric's Gannon Station to find appropriate blend
 8 fuels to reduce our overall fuel costs.

9
 10 Q. On December 23, 1994, a petition was filed with this
 11 Commission requesting recovery of buy-out costs associated
 12 with the buy-out of the Peabody Coalsales, Inc. contract.
 13 Are the costs and benefits associated with the Peabody buy-
 14 out included in the projected fuel charge factor for the
 15 April - September 1995 period?

16
 17 A. Yes they are.

18
 19 Q. Are the costs and benefits consistent with those filed in
 20 the supporting data included with the petition?

21
 22 A. Yes they are.

23
 24 Q. Please describe how the costs associated with the Peabody
 25 buy-out are allocated between wholesale and retail

REVISED 02/09/95

1 Customers.

2

3 A. The costs associated with the Peabody buy-out have been
4 allocated to the wholesale Requirements Customers through
5 the inclusion of the costs in Total Net Fuel and Purchased
6 Power Expense (prior to the jurisdictional separation).
7 Buy-out costs have not been allocated to the separated Big
8 Bend Unit Four sale and Schedule D Customers since those
9 Customers do not receive the benefit of the lower fuel
10 cost. Separated Schedule D Customers are unit power sales
11 from Big Bend Units 1 through 4. The fuel charge for these
12 sales is based on supplemental coal cost. The Peabody buy-
13 out will only benefit those currently paying for contract
14 coal in Big Bend Units 1 - 4. Buy-out costs have not been
15 allocated to the sale of Big Bend Unit Four energy to
16 Hardee Power Partners. Again, these Customers would not
17 realize the benefit of lower fuel costs associated only
18 with Big Bend Units 1 through 4.

19

20 Q. Please describe any compliance costs associated with the
21 Clean Air Act Amendment that have been included in the
22 calculation of the average fuel charge factor for the April
23 - September 1995 period?

24

25 A. Only the costs associated with sulfur dioxide emission

1 allowances have been included in the factor. In addition
2 to the 86,485 allowances granted by EPA for 1995, 17,000
3 allowances were purchased for Phase 1 compliance at an
4 average cost of \$146 per allowance. The weighted average
5 cost of all of the allowances is calculated as follows:
6

7 86,485 granted allowances @ \$0 per allowance
8 17,000 purchased allowances @ \$146.48 per allowance
9 103,485 total allowances @ \$24.06 per allowance
10

11 In the month of May, proceeds from the 1995 auction will
12 lower the average dollar per allowance to \$22.55. In
13 April, 5,802 tons of SO₂ are projected to be emitted and in
14 the May - September 1995 period, 30,683 tons are projected
15 to be emitted. Therefore, the dollars associated with
16 allowances for this period are 5,802 times \$24.06 plus
17 30,683 times \$22.55 or \$831,445 (rounding). This
18 accounting treatment of allowances was established by the
19 Federal Energy Regulatory Commission (FERC) in FERC Order
20 No. 552.
21

22 Q. Why were additional allowances purchased?
23

24 A. The decision to purchase allowances was a strategic
25 compliance decision based on Tampa Electric's best estimate

1 of future levels of generation for affected units and the
2 future differential in costs between high and low sulfur
3 coal versus the cost to purchase allowances.

4
5 Q. How are projected allowance costs allocated among the
6 various classes?

7
8 A. Allowance costs have been added on a dollar per ton basis
9 to the cost of Big Bend Station coal. This methodology
10 properly allocates allowance costs to all users of Big Bend
11 Station. Allowance costs allocated to jurisdictional
12 interchange sales and all separated sales with the
13 exception of Requirements sales are included on Schedule E-
14 6. The allocation to the Requirements Customers is
15 accomplished by adding all remaining allowance costs to the
16 retail fuel expense and then applying the jurisdictional
17 separation factor to the combined total.

18
19 Q. Why is it appropriate to recover Clean Air Act Compliance
20 costs through the Fuel and Purchased Power Cost Recovery
21 Clause?

22
23 A. Since the only cost that Tampa Electric is seeking to
24 recover at this time is the cost of SO₂ allowances, it is
25 appropriate that the Customers who realize the benefit of

1 lower fuel costs associated with the ability to burn higher
2 sulfur coal are the same Customers who incur the costs
3 associated with the allowances that enabled the use of coal
4 with a higher sulfur content.

5
6 Q. Why has Tampa Electric chosen to recover these allowance
7 costs through the Fuel and Purchased Power Cost Recovery
8 Clause versus the Environmental Cost Recovery Clause?

9
10 A. While Tampa Electric recognizes the implementation of the
11 Environmental Cost Recovery Clause to facilitate recovery
12 of Clean Air Act Amendment Compliance costs, we feel that
13 the administrative requirement associated with a separate
14 filing for recovery of the relatively small expense would
15 be in excess of any associated benefit. We are, however,
16 willing to cooperate with the Commission should they desire
17 a separate filing.

18
19 Q. Are you also requesting Commission approval of the
20 projected Capacity Cost Recovery factors for the Company's
21 various rate schedules?

22
23 A. Yes.

24
25 Q. Have you prepared or caused to be prepared under your

1 direction or supervision an exhibit which supports this
2 request?

3
4 A. Yes. It consists of five pages identified as Exhibit No.
5 31 MJP-3, Capacity Cost Recovery.

6
7 Q. What payments are included in Tampa Electric's capacity
8 cost recovery factor?

9
10 A. Tampa Electric is requesting recovery, through the capacity
11 cost recovery factor, of capacity payments made pursuant to
12 cogeneration, small power production and purchased power
13 agreements to which we are a party.

14
15 Q. Please re-cap the proposed Capacity Cost Recovery Clause
16 factors for the April - September 1995 period.

17

18 A.

<u>Rate Schedule</u>	<u>Capacity Cost Recovery Factor (cents per kwh)</u>
21 RS	0.187
22 GS and TS	0.173
23 GSD	0.130
24 GSLD and SBF	0.119
25 IS-1, IS-3, SBI-1, SBI-3	0.011

1 SL-2, OL-1 and OL-3 0.029

2

3 These factors can be seen in Exhibit No. 31 (MJP-3), page
4 3 of 5.

5

6 Q. What is the composite effect of the above changes on a
7 1,000 kwh residential Customer?

8

9 A. A residential bill for 1,000 kwh will decrease \$0.19. See
10 following table.

11	Oct. 94	Apr. 95
12	thru	thru
13	<u>Mar. 95</u>	<u>Sep. 95</u>
14		
15	\$ 8.50	\$ 8.50
16	43.42	43.42
17	1.85	1.54
18	0.96	0.81
19	23.68	24.01
20	1.93	1.87
21	<u>2.06</u>	<u>2.06</u>
22	\$ 82.40	\$ 82.21

23

24 Q. When should the new charges go into effect?

25

1 A. They should go into effect commensurate with the first
2 billing cycle in April 1995.

3

4 Wholesale Revenue Recovery

5

6 Q. Please describe your reason for filing testimony regarding
7 the appropriate treatment of revenues from wholesale sales.

8

9 A. Following the filing of testimony for the 1994 Winter Fuel
10 Adjustment Docket No. 940001-EI, Staff raised the issue
11 (25a):

12 "Other than economy sales and revenues from
13 the seven entities that were separated out
14 in TECO's last rate case, should Tampa
15 Electric credit all non-fuel revenues from
16 off-system sales back to the retail
17 ratepayers through the fuel adjustment
18 clause and the capacity cost recovery
19 clause?"

20

21 The issue was deferred to this fuel hearing. Therefore,
22 the purpose of my testimony is to provide the Commission
23 and Commission Staff with the information they need on
24 Tampa Electric's position on the appropriate treatment of
25 wholesale sale revenues.

1 Q. Please describe the various types of off system sales in
2 which your company engages and identify the retail
3 regulatory treatment as stipulated to in Tampa Electric
4 Company's last general rate case.

5
6 A. Exhibit No. 32 (MJP-4) describes the various types of sales
7 in which Tampa Electric engages.

8
9 Tampa Electric primarily engages in emergency sales
10 (Schedule A and B), economy sales (Schedule C and X),
11 other interchange (Schedule D and J), the TPS Contract
12 Sale, and Requirements Sales (AR-1). In TECO's last
13 general rate case in 1992, revenues from the company's firm
14 wholesale sales, including Requirements Sales, unit power
15 sales (TPS Contract), and station power sales (firm
16 Schedule D), were ordered to be separated from the retail
17 jurisdiction. The intent of the Commission was to separate
18 wholesale sales and those that "looked like" wholesale
19 sales. Based on this determination, a portion of total
20 rate base and expenses was allocated, for these sales, to
21 the wholesale jurisdiction. The purpose of this separation
22 was to isolate the revenues, rate base and expenses to be
23 used in setting retail prices, based on the test years
24 litigated in the case. The non-fuel revenues from non-firm
25 off-system sales (other than economy) were ordered to be

1 credited to retail ratepayers in the Capacity Cost Recovery
2 Clause (CCRC) and the Fuel and Purchased Power Cost
3 Recovery Clause (FPPCRC). The rate base and expenses for
4 these sales were ordered to be treated as part of the
5 retail jurisdiction. Likewise, revenues from these sales
6 are credited to the retail jurisdiction in the CCRC and the
7 FPPCRC.
8

9 **Q.** What characteristics are common exclusively to the sales
10 that were ordered to be separated in Tampa Electric's last
11 general rate case?
12

13 **A.** Tampa Electric's Requirements sales, the TPS Contract Sale,
14 and firm Schedule D sales were ordered to be separated from
15 the retail jurisdiction. The common characteristics which
16 set these sales apart from the remaining, jurisdictional
17 interchange sales are Tampa Electric's commitment to serve
18 these classes and the Customer's commitment to a prescribed
19 capacity payment. Agreements were signed and filed with
20 the FERC with each Customer in these separated classes that
21 established in advance a capacity commitment, comparable to
22 the commitment to serve Tampa Electric's firm retail
23 Customers, and an associated availability commitment in
24 return for a firm capacity payment.
25

1 Q. Are all Schedule D Sales separated? Please explain.

2

3 A. There are two types of Schedule D sales. The sales that
4 were ordered to be separated were the firm Schedule D
5 sales. The other type of Schedule D sale is non-firm as-
6 available service. Tampa Electric currently has an
7 agreement with Seminole Electric Cooperative for the
8 latter. This type of sale was ordered to be treated within
9 the retail jurisdiction.

10

11 Q. Order No. PSC-93-0664-FOF-EI was an order issued by the
12 Commission in Tampa Electric Company's last general rate
13 case that dealt specifically with the issue of how the off-
14 system sales should be treated in the FPPCRC and the CCRC.
15 In this order, some of the specific types of sales were
16 referenced by type of sale (TECO Power Services contracts),
17 some were referenced by the Customers that were currently
18 being served at the time of the jurisdictional separation
19 study (City of Sebring), and still another carried both
20 references (firm Schedule D sales (for the Cities . . .)).
21 Does your company believe that the intent of the order was
22 to separate specific Customers or entities or specific
23 types of sales?

24

25 A. Tampa Electric believes that the intent of this order was

1 to separate specific types of sales into the retail and
2 wholesale jurisdictions, but not to go so far as to
3 separate sales to specific "entities". For instance, it is
4 not of significance that requirements sales projected in
5 the rate case were designated in the order as being to the
6 City of Sebring (which they were when the projections were
7 made) instead of to Florida Power Corporation (which the
8 sales became after the order). This is not significant
9 because all requirements sales are a separated type, or
10 class, of Customers and once a class of Customers has been
11 separated from the retail jurisdiction, that class should
12 be treated as being separated until another jurisdictional
13 separation is approved by the Commission in the next rate
14 proceeding. At the time of Tampa Electric Company's last
15 general rate case, revenues from requirements Customers
16 were identified at a point in time as "Sebring sales" and
17 separated based on our best knowledge of our projected
18 level of requirements service. We do not believe that the
19 intent of the order was to require Tampa Electric Company
20 to flow back the non-fuel revenues now associated with the
21 sale to Florida Power Corporation simply, for example,
22 because Florida Power Corporation was not one of the "seven
23 entities" identified in our last rate case. Nor do we
24 believe that because the sales once projected to be made to
25 Sebring are no longer to Sebring, that retail rates should

1 be increased to reflect the loss of wholesale sales.
2 Likewise, if Tampa Electric added a new requirements
3 Customer between rate cases, as fellow utilities Florida
4 Power Corporation and Florida Power and Light have done, we
5 would treat that sale as a separated sale. Once again,
6 requirements sales are a separated class of Customers.
7

8 Q. Why does Tampa Electric feel that their treatment of firm
9 Schedule D sale revenues from the city of Ft. Meade and
10 Kissimmee Utility Authority is fair to both retail
11 ratepayers and Tampa Electric?
12

13 A. Like AR-1 sales, Firm Schedule D sales are also a separated
14 class of Customers as ordered by the Commission in Tampa
15 Electric Company's last rate case. The firm Schedule D
16 sales projections utilized for purposes of establishing
17 rates were estimated amounts based on prospective Customers
18 and transactions. Tampa Electric asserts that specifically
19 "who" the Customers are is insignificant. Since the time
20 of the rate case, in some cases, the anticipated revenues
21 from prospective firm off-system sales Customers have not
22 materialized. During the same period, however, Tampa
23 Electric has made increased levels of firm off-system sales
24 to other Customers. This same phenomenon can occur within
25 any class of Customers. The Commission recognizes that the

1 future will always be different from the forecast and the
2 effect of those differences in revenues is dealt with in
3 surveillance by allowing a range in the earned return on
4 equity for the allowed return. Upon ordering rate base and
5 expenses associated with firm Schedule D sales to be
6 removed from the retail jurisdiction for the purposes of
7 setting prices based on the test year(s), the Commission
8 effectively challenged the company to maintain the revenues
9 to support the separated revenue requirements if it wishes
10 to earn the allowed return. The firm Schedule D sale
11 agreements to the city of Ft. Meade and Kissimmee Utility
12 Authority made subsequent to the rate case separation study
13 are identical to the other Schedule D sales that were
14 separated in the last rate case.

15
16 Based on the foregoing, Tampa Electric's treatment of
17 wholesale sales has been to apply revenues from all firm
18 Schedule D sales along with the other separated sales to
19 offset wholesale revenue requirements. Tampa Electric
20 asserts that its treatment of off-system sales revenues is
21 fair because it balances the risks associated with the
22 "snapshot" rate case separation of revenues, rate base, and
23 expenses of these sales with potential benefits to the
24 company, while insulating the retail Customers from any
25 risk associated with shortfalls in projected revenues.

1 Since the Commission's order effectively required that
2 shareholders carry the entire risk of recovering the
3 portion of rate base and expenses associated with firm
4 Schedule D sales, Tampa Electric Company further asserts
5 that it must retain the ability to acquire additional sales
6 agreements to potentially cover the separated revenue
7 requirements in the event that an existing agreement does
8 not provide the level of revenue expected or the
9 anticipated agreements do not materialize. Requiring the
10 company to credit revenues from sales agreements obtained
11 subsequent to the rate case projections to the retail
12 ratepayers without a mechanism to recover from the retail
13 Customer any lost revenues originally projected but not
14 realized is inequitable and asymmetrical treatment. Tampa
15 Electric should not be expected to carry the downside
16 potential for lost sales without the upside potential of
17 increased revenues. Retail ratepayers are held harmless in
18 the event of wholesale revenue shortfalls and, therefore,
19 should not receive the benefits from additional sales in
20 the wholesale jurisdiction.

21
22 Q. Please summarize.

23
24 A. Retail base rates were established during Tampa Electric's
25 last rate case by determining, at a "snapshot" point in

1 time, the proper allocations of rate base and expenses to
2 each class of Customer. Since firm Schedule D sales were
3 separated to the wholesale jurisdiction in the last rate
4 case, that treatment should remain consistent until another
5 jurisdictional separation methodology is approved in the
6 next general rate proceeding. Each projection used for the
7 purposes of setting rates is subject to change (level of
8 retail sales, expenses, rate base, return necessary etc.).
9 To protect both the ratepayers and the company from
10 significant, excessive variability in returns, an ROE range
11 was established. Separated wholesale sales, like all
12 elements of the price setting basis, are also subject to
13 change. Tampa Electric was ordered to absorb all risks
14 associated with varying levels of separated sales including
15 the firm Schedule D sales in its last rate case. It
16 follows that Tampa Electric should have the ability to seek
17 out and engage in additional transactions to maintain the
18 revenue requirement and to provide an upside potential to
19 appropriately balance the downside risks.

20
21 It has become apparent to Tampa Electric that the letter of
22 the order has the potential of being interpreted in a
23 manner that we feel is inappropriate and asymmetrical with
24 respect to risks and benefits. We would recommend that an
25 appropriate interpretation of the order would be to clarify

1 that the firm Schedule D sales are a separated class. All
2 future firm Schedule D sales should also be separated
3 between now and the time of the next general rate
4 proceeding.

5

6 Q. Does this conclude your testimony?

7

8 A. Yes it does.

1 **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2 **PREPARED DIRECT TESTIMONY**

3 **OF**

4 **ELIZABETH A. TOWNES**

5
6 **Q.** Please state your name, business address and occupation.

7
8 **A.** My name is Elizabeth A. Townes. My business address is 702
9 N. Franklin St., Tampa, Florida 33602. I am the assistant
10 controller of Tampa Electric Company.

11
12 **Q.** Please describe your educational background and business
13 experience.

14
15 **A.** I received a bachelor of business administration degree in
16 accounting from Florida International University in 1978
17 and a Master of Business Administration degree from the
18 University of Tampa in 1982. I am a Certified Public
19 Accountant licensed in the state of Florida and a member of
20 the Florida and the American Institute of CPA's. I am also
21 currently a member of the Edison Electric Institute's
22 Corporate Accounting Committee.

23
24 Prior to joining Tampa Electric Company in January 1982, I
25 was employed by General Telephone Company of Florida in

1 various accounting and regulatory functions. I was hired
2 by Tampa Electric Company in January 1982 in the position
3 of regulatory accountant. In September 1983, I was
4 promoted to manager Regulatory Control and subsequently in
5 February 1991, I was promoted to my current position as
6 assistant controller.

7
8 My current responsibilities include accounting for fuel
9 activities, conservation, oil backout and other regulatory
10 accounting areas, the revenue and financial reporting
11 functions, preparation of budgeted financial statements and
12 the monthly surveillance report. I am also responsible for
13 disbursements and bank reconciliation processes.

14
15 Q. Have you testified before this Commission in other
16 proceedings?

17
18 A. Yes. I have provided written testimony in Docket No.
19 920001-EI, 930001-EI, and 940001-EI related to the
20 company's oil backcut cost recovery clause and in Docket
21 No. 920324-EI which is Tampa Electric company's most recent
22 full rate case. I also testified in the Docket No.
23 930987-EI , Investigation into Currently Authorized Return
24 On Equity of Tampa Electric Company.

25

1 Q. What is the purpose of your testimony in this proceeding?

2

3 A. The purpose of my testimony in this proceeding is discuss
4 Tampa Electric Company's accounting treatment of long term
5 firm Schedule D sales which were separated and treated as
6 wholesale transactions during the company's last rate case.

7

8 Q. Have you testified on this issue previously?

9

10 A. Yes, in Docket No. 930987-EI I testified to our accounting
11 treatment for off system sales and described the method we
12 have used consistently on our surveillance report to
13 allocate between wholesale and retail.

14

15 Q. Please discuss the treatment of these sales in the last
16 case.

17

18 A. In the company's last rate case, the Commission very
19 clearly established a philosophy which determines what
20 types of sales were to be separated to the wholesale
21 jurisdiction and which should be included in the retail
22 jurisdiction. The company's rate case test years were
23 projected for 1993 and 1994. The long term firm Schedule
24 D sales utilized for purposes of establishing rates were
25 estimated amounts based on prospective Customers and

1 transactions, just as all other items of revenue, expense
2 and rate base were estimated.

3
4 Since that time, new Customers were added and other
5 contracts which were anticipated during the case did not
6 materialize. This same phenomenon occurs within all
7 classes of Customers. However, Tampa Electric company
8 continues to treat all of this category of sales consistent
9 with the treatment accorded during the rate case.

10
11 **Q.** How does this treatment impact the reporting of the
12 company's earned return for surveillance purposes?

13
14 **A.** The Commission monitors Tampa Electric's earnings from
15 retail sales through Tampa Electric's monthly surveillance
16 report. Each month as the company calculates its earned
17 return to equity, the actual expenses and the rate base
18 amounts which are separated and allocated to wholesale
19 Customers are adjusted up or down to reflect the actual
20 level of wholesale sales. This treatment offers the
21 Commission a valid current picture of the regulatory return
22 being achieved in the retail jurisdiction.

23
24 **Q.** Could you describe your treatment in a little more detail?
25

1 A. The company's total actual rate base and expenses are
2 allocated between retail and wholesale utilizing the same
3 methodology as was ordered in our last rate case. We
4 adjust the separation factors used in the last rate case by
5 comparing the current demand and energy levels to the
6 amounts earlier estimated in the 1993 separation study
7 approved in Docket No. 920324-EI. Although this method
8 does not contain as much detail as a full separation study,
9 it does provide an appropriate and adequate estimate for
10 purposes of tracking consistently the current retail return
11 in the surveillance report.

12

13 Q. Is this the same treatment that other companies use?

14

15 A. It is my understanding that companies continue to treat
16 separated sales the same between rate cases and do not flow
17 revenues from new contract sales back to ratepayers. The
18 methodology which Tampa Electric has adopted for reporting
19 earnings on the surveillance report is different from that
20 utilized by other companies. Most companies do not change
21 separation factors between rate cases. Therefore, if the
22 relationship between wholesale and retail changes
23 significantly in between rate cases, no indication of that
24 change is reported.

25

- 1 Q. Do you believe that Tampa Electric's treatment of these
2 types of sales is fair and reasonable?
3
- 4 A. Yes, I do. The first reason I believe it is fair is that
5 the Commission established a category or type of sale which
6 they considered to be non-retail in nature. Therefore, in
7 order for symmetry to work, the company cannot be expected
8 to absorb any downside impacts without also benefitting
9 from any upside impacts. The company's treatment of these
10 sales maintains the symmetry of increases and decreases in
11 our wholesale activities. Second, the surveillance report
12 treatment affords the Commission a much clearer picture of
13 the company's actual earnings position with respect to the
14 retail contribution. Since the surveillance reporting
15 procedure is identical for increases and decreases, again
16 the symmetry is preserved. Third, I believe that this
17 treatment is consistent with all other items which are
18 considered in setting rates. Expenses and revenues go up
19 and down in between rate cases. However, the company
20 continues to report the earned return to the Commission
21 utilizing the same treatment of revenues and expenses as
22 was approved in the company's last rate case. In this way,
23 the surveillance report properly reflects current business
24 conditions, including changes which have taken place within
25 each and every Customer class.

1 It should be noted that if separated wholesale transactions
2 yield higher energy and demand than anticipated, retail ROE
3 will be shown as being higher through our method of
4 surveillance reporting. Thus, the efficiency and overall
5 benefit gained through greater off system sales levels is
6 reflected in the reported retail ROE. In effect, the
7 proper signals are sent through this accounting treatment -
8 increased wholesale sales lead to better utilization of
9 the "total ratebase" (retail and wholesale) and thus tend
10 to defer the timing of Tampa Electric's next retail rate
11 case.

12
13 Q. Why would it not be fair to flow these revenues back
14 through the fuel clause?

15
16 A. This treatment would penalize the company and would not
17 provide the right incentives. Not only would Tampa
18 Electric lose revenues from sales which do not materialize
19 -- it would also forfeit revenues from additional sales
20 which do occur. This is not a symmetrical treatment, nor
21 would it be fair. Shareholders would absorb the impact of
22 lost wholesale contracts and all other changes in revenues
23 and expenses. However, ratepayers would benefit from new
24 contracts while shareholders still absorb other changes in
25 revenues and expense.

1 Q. Does this conclude your testimony?

2

3 A. Yes, it does.

25

1 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2 PREPARED DIRECT TESTIMONY

3 OF

4 ELIZABETH A. TOWNES

5
6 Q. Would you please state your name and address?

7
8 A. My name is Elizabeth A. Townes. My business address is 702
9 North Franklin Street, Tampa, Florida 33602.

10
11 Q. Please describe your educational background and experience.

12
13 A. I received a Bachelor of Business Administration degree in
14 Accounting from Florida International University in 1978
15 and a Master of Business Administration from the University
16 of Tampa in 1982. I am a Certified Public Accountant in
17 the state of Florida and a Member of the Florida Institute
18 of Certified Public Accountants and American Institute of
19 Certified Public Accountants.

20
21 Prior to joining Tampa Electric Company in January 1982, I
22 was employed by General Telephone Company of Florida. I
23 joined Tampa Electric as a regulatory accountant. In
24 September 1983, I was promoted to Manager-Regulatory
25 Control and subsequently in February 1991, I was promoted

1 to my current position as Assistant Controller.

2

3 My current responsibilities include accounting for fuel
4 activities, conservation, oil backout and other regulatory
5 accounting areas. I am also responsible for the revenue
6 and financial reporting functions and accounts payable.

7

8 Q. Ms. Townes, what is the purpose of your testimony in this
9 proceeding?

10

11 A. The purpose of my testimony is to present a summary
12 computation of the estimated Oil Backout Cost Recovery
13 Factor to be collected during the six-month projection
14 period beginning April 1995 and ending September 1995,
15 including the estimated true-up adjustment required as of
16 March 1995.

17

18 Q. Have you prepared documents in support of your testimony?

19

20 A. Yes. I have jointly prepared with Mr. Cantrell a composite
21 exhibit titled "Schedules Supporting Oil Backout Cost
22 Recovery Factor" indicated as Exhibit No. (WNC/EAT-2).
23 This exhibit is a summary of the detailed computations,
24 prepared under my supervision and direction, to derive the
25 estimated Oil Backout Cost Recovery Factor. This exhibit

1 consists of six documents and I will make references in my
2 testimony to each of the documents and explain the
3 development, or source, of each line item. I have also
4 jointly prepared with Mr. Cantrell Exhibit No. (WNC/EAT-3)
5 titled "Comparison of Projected Payoff with Original
6 Estimate, as of November 1994." This exhibit provides a
7 comparison of the estimated payback of the Gannon
8 conversion project with the original projection submitted
9 during the 1982 qualification hearings.

10
11 Q. Ms. Townes, would you first please summarize the key
12 assumptions used in your derivation of the estimated
13 factor?

14
15 A. Yes. The key assumptions involved with the determination
16 of the factor for the projection period are the estimated
17 fuel savings, the estimated revenue requirements associated
18 with the converted Gannon Units and common facilities, the
19 estimated energy sales, and the estimated true-up as of
20 March 1995.

21
22 Q. What is the estimated Oil Backout Cost Recovery Factor
23 which you have determined for the six-month projection
24 period ended September 1995?

25 A. ~~The~~ The factor which I have determined to be appropriate for

1 the projection period is .081 cents per kilowatt hour.
2 This factor is shown on line 19, of Document 1.

3
4 Q. Please explain the computations shown on Document 1.

5
6 A. The computations begin with the estimated energy sales
7 during the projection period shown on line 1. These
8 amounts are consistent with the company's fuel adjustment
9 filing in this docket. Lines 2 through 4 reflect the
10 estimated fuel savings supplied by Mr. Cantrell. Lines 5
11 through 10 reflect a computation of the estimated revenue
12 requirements associated with the Gannon Oil Backout
13 Project. Lines 11 through 13 reflect a computation of the
14 estimated net savings and the amount available for
15 additional depreciation under the Clause, as determined on
16 a six-month basis. Lines 14 through 19 reflect the
17 computation of the Oil Backout Cost Recovery Factor
18 including the estimated net true-up adjustment required as
19 of March 1995.

20
21 Q. Ms. Townes, please explain your computation of revenue
22 requirements shown on lines 5 through 10.

23
24 A. The computation begins on line 5 with the estimated
25 straight-line depreciation expense associated with the

1 various components of the Plant in Service investment. The
2 monthly provisions for depreciation reflected on line 5 are
3 based on the currently approved depreciation rates for the
4 various components of the Plant in Service investment.
5 Line 6 reflects the estimated interest carrying cost of the
6 Plant in Service investment. The projected monthly
7 interest expense is determined based on the projected debt
8 cost applied to the average debt balance for each month.
9 Income tax expense, shown on line 7, is computed on
10 Document 3. The estimated monthly property tax expense is
11 shown as Taxes Other Than Income Taxes on line 8. The
12 amounts shown on line 9 represent the operation and
13 maintenance expense differential which was furnished by
14 Mr. Cantrell. Total revenue requirements reflected on line
15 10 represent the sum of all revenue requirement components
16 shown on lines 5 through 9.

17
18 Q. Ms. Townes, would you please explain Document 2 reflecting
19 your computation of the Plant in Service investment?
20

21 A. Yes. Line 1 of Document 2 reflects the actual unrecovered
22 investment in Plant in Service at the beginning of each
23 month shown. Since no additional expenditures are
24 currently anticipated, line 2 indicates no additions to
25 Plant in Service. Line 5 reflects the provision for

1 depreciation for the period. These are the same amounts
2 shown on line 5 of Documents 1 and 5. Line 6 reflects the
3 additional depreciation permitted under the Oil Backout
4 Recovery Clause, equivalent to 2/3 of the estimated net
5 savings which is shown on line 13 of Documents 1 and 5.
6 Line 7 reflects the estimated net unrecovered investment in
7 Plant in Service at the end of the month.

8
9 Q. Ms. Townes, would you please explain further the
10 computation of income tax expense reflected on line 7 of
11 Documents 1 and 5?

12
13 A. Yes. The computation of these amounts is shown on Document
14 3. Referring to Document 3, lines 1 through 5 agree with
15 amounts shown as components of revenue requirements
16 including those associated with additional depreciation, on
17 lines 5, 6, 8, 9, 10 and 13 on Documents 1 and 5. Line 7
18 reflects the portion of depreciation on line 2 which
19 represents depreciation of the equity portion of AFUDC
20 capitalized during construction. As this amount is not tax
21 deductible, it represents a "permanent" difference between
22 book and tax basis of plant. Thus, this portion of
23 depreciation expense for each month must be added back to
24 book income to compute income before income taxes on line
25 8. Line 9 reflects the income tax expense before ratable

1 amortization of investment tax credits using an effective
2 income tax rate of 38.575%. Line 10 reflects the ratable
3 amortization of investment tax credit consistent with the
4 investment recovery via depreciation expense. Line 11
5 reflects the total income tax expense which agrees with
6 amounts shown on line 7 of Documents 1 and 5.

7
8 **Q.** Ms. Townes, you indicated earlier that a key assumption in
9 determining the factor for this projection period is the
10 estimated true-up adjustment required for the six-month
11 period ending March 1995. Please explain the calculation
12 of the net true-up adjustment.

13
14 **A.** The projected cumulative net true-up adjustment as of March
15 1995 represents an overrecovery of \$153,138 as shown on
16 line 15 of Document 1. The true-up adjustment is
17 calculated on Documents 4, 5 and 6.

18
19 The computation begins on Document 4 with the estimated
20 tariff revenues to be billed under the Clause for each
21 month in the period from October 1994 through March 1995,
22 shown on Line 1. The Oil Backout Revenue applicable to
23 this period is then reduced by the estimated/actual cost
24 recovery under the Clause for each month in the period from
25 October 1994 through March 1995. The amounts on Line 4 are

1 calculated on Document 5. To this true-up provision shown
2 on Line 5 by month, is added the beginning of the month
3 true-up and interest provision, shown on Line 6 for a
4 cumulative end of the period net true-up before interest,
5 shown on Line 8. The resulting estimated true-up provision
6 at March 1995, of \$153,138 is shown on Line 10 of Document
7 4.

8

9 Q. What was the projected true-up amount for the six months
10 ended September 1994 which was included in the Oil Backout
11 cost recovery for the period October 1994 - March 1995?

12

13 A. In the filing dated June 27, 1994, the company projected a
14 cumulative underrecovery of \$(31,543) as of September 1994
15 which is currently being collected. The actual
16 underrecovery at September 1994 was \$(62,379), as reflected
17 on line 6 of Document 4. The actual underrecovery at
18 September 30, 1994, is due to higher than anticipated
19 operating expense.

20

21 Q. What is the status of the estimated payback of the Gannon
22 conversion project?

23

24 A. As shown on Exhibit No. (WNC/EAT-3), titled "Comparison of
25 Projected Payoff with Original Estimate, as of November

1 1994," cost recovery is now projected for 2001. The delay
2 in recovery from the original projection submitted during
3 the 1982 qualification hearings is due primarily to reduced
4 estimated fuel savings, as sponsored by Mr. Cantrell.

5
6 Q. Please explain any significant variances noted in the
7 payoff comparison.

8
9 A. Actual straight-line depreciation is less than the original
10 projection in 1982. This is due to the 1982 estimation of
11 early retirement of existing plant.

12
13 Significant variances noted in the cost of capital and
14 income tax components are due to the current estimate being
15 based on the approved 100% debt financing; whereas, the
16 original estimate was based on conventional financing,
17 which included a combination of debt and equity. Since
18 conventional financing included an equity component, income
19 taxes were provided on the return associated with the
20 equity component.

21
22 An estimate for taxes other than income taxes was not
23 included in the original estimate. An estimate is now
24 included since property taxes can be more reasonably
25 determined.

1 In the original estimate, revenue taxes were included as
2 part of the base revenue requirement (the sum of straight-
3 line depreciation, cost of capital, income taxes, taxes
4 other than income taxes, operation and maintenance
5 differential, and revenue taxes). Revenue taxes are now
6 excluded from the base revenue requirement. The Regulatory
7 Assessment fee is included in the total to be billed by
8 grossing up the Oil Backout factor.

9
10 The net result of the changes between the original and
11 current estimate is a decrease in base revenue requirement.
12 However, the expected additional depreciation has declined
13 due to reduced fuel savings. Additional depreciation is
14 computed as two-thirds of the excess of fuel savings over
15 the base revenue requirement determined on a six-month
16 filing period as required under the Oil Backout Clause.

17
18 Q. Ms. Townes, does this conclude your testimony?

19
20 A. Yes, it does.

21 (Transcript follows in sequence in Volume 2.)
22
23
24
25
