TARIFF FORMAT

A. Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

B. Sheet Revision Numbers - Revision numbers appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the Florida Public Service Commission. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Because of various suspension periods, deferrals, etc. the Florida Public Service Commission follows in its tariff approval process, the most current sheet number on file with the Commission is not always the tariff in effect. Consult the Check Sheet for the sheet currently in effect.

C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

2.
2.1
2.1.1
2.1.1.A.
2.1.1.A.1.
2.1.1.A.1.(a)
2.1.1.A.1.(a).I.
2.1.1.A.1.(a).I.(i).
2.1.1.A.1.(a).I.(i).(1)

D. Check Sheets - When a tariff filing is made with the Florida Public Service Commission, an updated Check Sheet accompanies the tariff filing. The Check Sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new pages are added, the Check Sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remain the same, just revised revision levels on some pages.) The tariff user should refer to the latest Check Sheet to find out if a particular sheet is the most current on file with the Florida Public Service Commission.

SECTION 3 - DESCRIPTION OF SERVICE, (CONT'D)
3.2 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between the Rate Centers associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the Rate Centers as defined by BellCore (Bell Communications Research), in the following manner:

- Step 1 -** Obtain the "V" and "H" coordinates for the Rate Center of the originating and the destination points.
- Step 2 -** Obtain the difference between the "V" coordinates of each of the Rate Centers. Obtain the difference between the "H" coordinates.
- Step 3 -** Square the differences obtained in Step 2.
- Step 4 -** Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5 -** Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6 -** Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating points of the call.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$

3.3 Call Timing

- 3.3.1 Long distance usage charges are based on the actual usage of the Company's network. Chargeable time begins when the calling and the called station are connected. Call timing is determined using industry standard methods of answer supervision, including hardware and software answer detection.
- 3.3.2 Chargeable time ends when the calling service point terminates, thereby releasing the network connection.
- 3.3.3 Unless otherwise specified in this tariff, usage is measured in one (1) minute increments for billing purposes. Partial usage will be rounded up to the next highest whole minute. All calls are rounded to the next highest billing increment. Any partial cents per call will be rounded up to the next highest cent.
- 3.3.4 Unless flat rated, usage charges are determined by the time of day rate periods and minutes of use within each rate period. The rate period is determined by the time and day of call originating at the Customer's Location.
- 3.3.5 No charges apply to unanswered calls.

SECTION 3 - DESCRIPTION OF SERVICE, (CONT'D)

3.5 USAN Prepaid Card Service

USAN Prepaid Card Service allows Customers to place direct dialed calls between locations within the State of Florida. Customers access the Company's network by dialing a toll-free number or other access dialing sequence and entering a Personal Account Code. The Company's system informs the Customer of the Available Usage Balance remaining in his/her Prepaid Account and prompts the Customer to place a call by entering a destination telephone number. Network usage for calls placed is deducted from the Available Usage Balance on the Customer's account on a real time basis as the call progresses.

Customers purchase a Prepaid Card which assigns each Customer a Prepaid Account, provides each Customer with a Personal Account Code and lists instructions for accessing and using Carrier's service. Prepaid Cards are available in various denominations.

Purchase of a Prepaid Card entitles the Customer to use the Company's network for a number of minutes equivalent to the card denomination divided by the effective per minute rate. Therefore, one minute equals one unit of use. The Customer's right to utilize network usage within a given Prepaid Account associated with that Prepaid Account number. No minimum service period applies.

Payment for Retail Prepaid Cards and Available Usage in a Customer's Prepaid Account is non-refundable.

Retail Prepaid Card service rates are not distance or time of day sensitive in nature. Holiday discounts do not apply.

Network usage for Retail Prepaid Card calls is deducted from the Available Usage Balance in Customer's Prepaid Account in full unit increments. For Prepaying purposes, the minimum call usage is one (1) unit.
