Re: Docket No. 990649-TP

Dear Ms. Bayó:

Enclosed are an original and 15 copies of BellSouth Telecommunications, Inc.'s corrected version of the Surrebuttal Testimony of D. Daonne Caldwell. When the testimony was filed on October 15, 1999, it contained a formatting error (the line numbers did not line up with the text on pgs. 6-10). Please file this document in the captioned matter to replace the previously-filed testimony.

A copy of this letter is enclosed. Please mark it to indicate that the original was filed and return the copy to me. Copies have been served to the parties shown on the attached Certificate of Service.

Sincerely

AFA APP CAF J. Phillip Carve CMU 00.1 CTR EAG Enclosures LEG MAS cc: All parties of record OPC PAI M. M. Criser, III SEC N. B. White WAW RECEIV R. D. Lackey OTH

25 Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?	24		
	25	Q.	WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

-1-

DOCUMENT NUMBER-DATE 13508 NOV-38 FPSC-RECORDS/REPORTING

2 A. The purpose of my surrebuttal testimony is to respond to comments made in 3 rebuttal testimony with respect to cost development. In particular, I wish to clarify 4 misinterpretations and misrepresentations of my filed testimony. Specifically, I 5 reply to COVAD witness, Ms. Terry Murray, Sprint witness, Mr. Kent Dickerson, 6 and Florida Digital Network witness, Ms. Jeanne Senatore. There are several key 7 issues that need to be addressed: (1) use of "older" technology in a forward-looking 8 cost study, (2) "actual" costs in a TELRIC study, and (3) the relationship between 9 recurring and nonrecurring cost development.

10

1

11 Q. OTHER PARTIES HAVE PORTRAYED BELLSOUTH'S COST STUDY 12 METHODOLOGY AS EMBEDDED. PLEASE COMMENT.

13

A. An embedded methodology would match the books of the company. Thus, the
technologies would reflect exactly what BellSouth has placed in the past. For
example, analog switches, older carrier systems (T or N carrier), and limited fiber
deployment would be included. This is not what BellSouth proposes to include in
its cost studies. Rather, BellSouth proposes that the studies include forwardlooking currently available technologies.

20

21 Q. BOTH MR. DICKERSON AND MS. MURRAY CRITICIZE THE

22 CONSIDERATION OF "OLDER" TECHNOLOGY IN A FORWARD-

- 23 LOOKING STUDY. PLEASE COMMENT.
- 24

25 A. The network design issue is really twofold: (1) what constitutes a forward-looking

1 architecture and (2) what is the most efficient network design. However, this is not 2 an either/or decision, the design must fulfill both parts of the equation. In my 3 rebuttal testimony I provided examples where deploying "older" technology makes 4 economic sense, i.e., where it is a more efficient means to serve the demand. Often 5 two or more efficient technologies certainly can coexist in the market. For 6 example, while electric cars embody the "newest" technology, gasoline internal 7 combustion engines are still efficient. "Older" technology does not necessarily 8 denote inefficient technology.

9

10 It would not be appropriate to establish a policy where costs must be calculated as 11 if always using the newest technology. Forward-looking costs are those that reflect 12 the value of resources that will be efficiently used in the future; such costs do not 13 necessarily rely on the newest or latest technology. This would be inappropriate 14 since it would ignore one-half of the design requirements, the efficiency standard. 15 In the case of digital loop carrier equipment, both integrated systems and universal systems will continue to be deployed as forward-looking, least-cost technologies. 16 Thus, Mr. Dickerson's statement on page 3 of his testimony that "old" technology, 17 18 in reference to universal digital loop carrier systems, means embedded plant is wrong. The mix of technologies used in the cost studies will reflect the forward-19 looking projected distribution of technologies, not the embedded, current mix. 20 21

Q. IS DETERMINING THE EFFICIENT, FORWARD-LOOKING DESIGN MORE DIFFICULT THAN SIMPLY CHOOSING THE NEWEST TECHNOLOGY?

25

-3-

1 A. Yes. One of the reasons that determining a forward-looking, efficient network design is difficult is the fact that the ultimate design must reflect the total network, 2 3 not a subset of that network. Thus, a mixture of technologies is appropriate 4 because there is, and there will remain, just such a mixture in BellSouth's network. 5 However, the amount of "older" technology is based on economic considerations. 6 Ms. Murray comments that "future technology mix [that] departs from the least-7 cost, most-efficient technology" has no place in a TELRIC study. (Page 21 8 Murray Rebuttal) I agree, but again, because the study needs to reflect the total network, a mixture of technologies does reflect the least-cost, most-efficient 9 10 technology. In slow growth areas, BellSouth will deploy current generation (as 11 opposed to next generation) systems because it is more cost efficient. These 12 current generation systems require that the whole system be non-integrated 13 (universal) if there are any requirements for non-switched lines. This contrasts 14 with next generation systems in which one may mix integrated and non-integrated 15 lines on a shelf basis rather than on a system basis. In summary, incremental cost 16 methodology anticipates how resources will be deployed in the future, not how the 17 resources were deployed in the past. However, if future deployment plans reflect 18 a mix of technologies, the cost analysis appropriately should also reflect that future 19 mix.

20

21 Q. ARE THERE ANY DIRECTIVES IN THE FCC ORDER THAT ADDRESS 22 FORWARD-LOOKING DESIGN?

23

A. Yes. Any conclusion with respect to network design made by this Commission
must be tempered with the FCC's desire to reflect the costs the incumbent will

-4-

incur. The FCC states that an essential consideration in adopting its definition of 1 forward-looking design is that it "most closely represents the incremental costs that 2 3 incumbents actually expect to incur in making network elements available". (¶685 4 FCC Order) In fact, Ms. Murray appears to agree that the only relevant costs are 5 "the incumbent's forward-looking economic costs." (Page 2 Murray Rebuttal 6 Testimony) Thus, I have difficulty understanding her conclusion on page 21 "that 7 forward-looking cost studies should assume whatever technology the incumbent 8 plans to deploy" is false. Obviously, only by considering what BellSouth plans to 9 deploy can one ascertain the costs BellSouth will incur. Again, let me emphasize 10 that what BellSouth plans to deploy is both forward-looking and efficient and does 11 not reflect an embedded network. BellSouth's deployment objectives are to 12 provide the most forward-looking telecommunications network, in the most cost 13 efficient manner. 14 O. ARE THERE OTHER ASPECTS OF THE COST STUDY THAT MUST 15 16 **MEET THE FORWARD-LOOKING REQUIREMENT, AS ESTABLISHED** BY THE FCC? 17 18 A. Yes. The FCC Order also states that the cost of money and the depreciation rates 19 must be forward-looking. BellSouth feels that it can best evaluate the projected 20 cost of debt and equity and the associated structure of that debt and equity. 21 Additionally, BellSouth will present depreciation studies to this Commission that 22 best reflect the future depreciation rates for telecommunications equipment. 23 24 O. ON PAGE 8 OF HER TESTIMONY, MS. SENATORE IMPLIES THAT 25

1 YOU ADVOCATE USING ACTUAL COSTS. IS THIS CORRECT?

2

3 A. No. BellSouth witness, Mr. Varner uses the term "actual cost" in his discussion of 4 how rates should be set, not as part of the cost development. As Mr. Varner 5 discussed, it is BellSouth's position that in establishing rates, consideration must be 6 given to all of BellSouth's cost to provision UNEs and interconnection. Mr. Varner 7 presented BellSouth's position before this Commission in the UNE docket 8 in which BellSouth requested approval of a residual recovery requirement. The 9 fact that BellSouth proposed the residual recovery requirement separate from 10 BellSouth's TELRIC study, is evidence that BellSouth's cost studies do not include 11 embedded cost. From a cost methodology perspective, BellSouth's cost studies 12 should, and do, reflect the costs BellSouth will incur in deploying a forward-13 looking design in the future. 14 Q. ON PAGE 9 OF HER TESTIMONY, MS. MURRAY ALLEGES YOU 15

V V. STITIGE / STITICE POLICE PRODUCE COMBINE COMPANY

16 SUPPORT AN "'AD HOC' APPROACH TO DEVELOPING NON-

17 RECURRING COSTS." PLEASE COMMENT.

18

A. Ms. Murray references page 17 of my direct testimony with no quote as support for
her allegation. I have re-read that page and fail to find any support for her
argument that I propose using two different network designs, one for recurring cost
development and another for nonrecurring cost development. BellSouth uses
network personnel, familiar with the forward-looking provisioning guidelines, to
identify the tasks and time involved in providing network elements, either
individually or in combination. Their estimates are based on the same network

-6-

used to identify the investments needed to provide the network elements. Thus,
 both studies are "in-synch".

3

.

Ms. Murray also references page 7 of my direct testimony. Below is an excerpt
from that page (emphasis added):

6

7 The cost methodology for combinations should not differ from the cost 8 methodology used for unbundled elements since they will both be used to 9 support rates for items offered to competitors. Thus, the methodology should 10 be based on an efficient network, designed to incorporate currently available 11 forward-looking technology. However, some of the inputs into a combination 12 study may differ from UNE inputs depending on the final list of UNEs and any resulting currently combined UNEs that BellSouth is obligated to provide. For 13 14 example, if BellSouth must provide a currently combined loop and port, integrated digital loop carrier would be considered to be in the mix of 15 technologies providing that existing combination. In the UNE study, 16 integration is not an option since each element is unbundled and provided 17 separately. Thus, integrated digital loop carrier is not appropriate for individual 18 UNEs. This distinction results from the cost object being studied rather than 19 the underlying methodology. 20

21

22 With respect to nonrecurring cost development, I stated:

23

Additionally, based on the caveats surrounding the definition of a
"combination", nonrecurring inputs may differ. A combination defined as

-7-

"switch-as-is" has substantially lower work times than the work times required
 to combine two UNEs.

3

4 Nowhere do I propose using two different architectures for the network. I merely 5 state that the inputs into the cost study are dependent upon the object being 6 studied. The definition of the cost object can also influence the appropriate 7 technologies reflected in the cost study for that object. For example, the loop as an 8 unbundled network element is a stand-alone offering. Therefore, the unbundled 9 loop terminates on the main distributing frame ("MDF") and is not integrated into 10 the switch. Thus, the discussion of integrated digital loop is included carrier in my 11 direct testimony.

12

Q. AS BELLSOUTH'S COST WITNESS, CAN YOU SUMMARIZE WHAT YOU SEE AS THE KEY ISSUES THAT HAVE TO BE RESOLVED WITH RESPECT TO COST METHODOLOGY?

16

A. From my involvement in both arbitration cases and generic cost dockets and from
the testimony presented in this docket, I can summarize the key issues that need to
be resolved as:

20

The definition of a forward-looking network. - Other parties have advocated
 abandoning all ties with reality and building a hypothetical network, a network no
 telecommunication provider can attain. BellSouth feels the network should be
 grounded in the realities of a network that can be built and will provide reliable
 telecommunications service.

2 2) <u>The inclusion of BellSouth-specific input versus "expert" estimated values</u> - Other
3 parties have attempted to portray inputs based on company specific data as
4 embedded. First, BellSouth's studies provide forward-looking costs since historical
5 inputs are only used as a starting point in the study. Projected, future data is used
6 to determine the inputs used in the studies. Second, only BellSouth-specific data
7 will reflect the costs BellSouth will incur.

8

1

9 3) <u>The provisioning of element combinations -</u> BellSouth studies currently have not
10 considered this possibility since it was felt combinations replicate existing network
11 services, not unbundled elements. Since the network capabilities are yet to be
12 defined, it is premature to argue this point. However, it is important to recognize
13 that input into combination studies will differ from unbundled element studies
14 because of the item (cost object) that is studied.

15

4) Modeling techniques - The choice is between a theoretical model that totally 16 redesigns the network from scratch or one that considers costs BellSouth will 17 actually incur, constrained by the forward-looking criterion. BellSouth advocates 18 the second option. Also, as I mentioned previously the FCC supports this method. 19 Thus, the wire center locations and digital loop carrier sites would remain as they 20 are currently. However, the facilities serving these locations would be redesigned 21 to meet forward-looking, efficient design criteria. In other words, the key issue to 22 be resolved by this Commission will be the selection of a model that most 23 accurately reflects the forward-looking costs BellSouth will incur in providing 24 25 unbundled network elements.
