Dear Director,

I am of the understanding that permits for the wetland impacts for Mills Creek on Roses Bluff Rd. and wetlands on Lentz Rd. in Nassau County have not been issued. I am also of the understanding that the developer applying for these permits will be Strickland Holloway, Jr., Amelia Island Ventures, Inc., Lighthouse Pointe.

I am very concerned about the impact of sewer pipe being laid on the discharge side of Mills Creek at Roses Bluff Rd.. At this point, there are three five foot culverts draining the wetland/flood plains through these culverts, down the creek and into the Bells and Jolly Rivers. During a heavy rain event, in the past, water has flooded across Roses Bluff Rd. at the culvert site. I am concerned about the scouring effect on these sewer pipes after repeated rain events. The pipes are in approximately 20 foot lengths and the creek bed is over 20 feet wide. Consequently, at least two connecting joints will be in the creek bed. According to John Pine with United Water, the PSI in the sewer pipe will average 30 pounds. If this sewer pipe or its connections are compromised in any way, we may have liquefied sewage spewing into Mills Creek and then into the Bells and Jolly Rivers. This would be an environmental disaster.
