## P R O C E E D I N G S

1  
2 (Transcript follows in sequence from  
3 Volume 30.)

4 CHAIRMAN CARTER: I would like to call this  
5 hearing to order. I've got a couple of preliminary  
6 matters I'd like to mention before I recognize Ms. Clark  
7 to mention her preliminary matters.

8 Mike, can you turn my mike down maybe one  
9 notch?

10 On preliminary matters, before I recognize Ms.  
11 Clark, let me say to all of the parties, and I hope all  
12 of you guys are here, misery loves company. The dates  
13 that we have available, which I think will work better  
14 because they're contiguous, would be September 16 and  
15 September 17. That is a Wednesday and a Thursday. And  
16 I think we can complete it on that. Also, just to give  
17 you a heads-up, is that we're probably going to be doing  
18 at least 12-hour days on those two days, because we're  
19 going to bring this thing in for a landing. So eat your  
20 Wheaties and be ready. Those will be at least 12-hour  
21 days so we can get it done. Again, September 16 and  
22 September 17. Minimum would be 9:30 a.m. to 9:30 p.m.,  
23 that's a minimum. So let's get ready for that.

24 Ms. Clark, you're recognized.

25 MS. CLARK: Thank you, Mr. Chairman.

1           Regarding the order of witness today, we had  
2 indicated just this morning to all the parties that we  
3 would like to take up Santos after Barrett and before  
4 Slattery, and to let you know that, looking at the order  
5 of witness and the likely amount of time, there would  
6 be -- we would not propose to have Slattery go on the  
7 stand today. In fact, we had indicated to her she could  
8 go home. As I understand it, no parties have any issues  
9 with taking up Santos after Barrett.

10           CHAIRMAN CARTER: Okay. Let me just say to  
11 the lawyers and the parties that your witnesses, we'll  
12 give them an opportunity to explain the answers, but  
13 don't give me the *Encyclopedia Brittanica*. Yes, no,  
14 but, just brief on that, okay, and let's kind of bring  
15 this thing in for a landing.

16           I have been very, very judicious in granting  
17 people time and all like that, but, lawyers, tighten up  
18 your questions, no friendly cross. Let's get this show  
19 on the road.

20           COMMISSIONER EDGAR: Ms. Clark, could you then  
21 run through the order of witnesses for today so that I  
22 can know what to be looking forward to?

23           MS. CLARK: Mr. Ender is on the stand now.  
24 After Mr. Ender, Ms. Deaton would come up, then Ms.  
25 Morley, then Mr. Barrett and then Ms. Santos.

1 COMMISSIONER EDGAR: Thank you.

2 CHAIRMAN CARTER: Anything further from the  
3 bench?

4 COMMISSIONER EDGAR: No, sir.

5 CHAIRMAN CARTER: Staff, any preliminary  
6 matters?

7 MS. BENNETT: No, sir.

8 CHAIRMAN CARTER: From any of the parties, are  
9 there any preliminary matters?

10 Let me express an apology to Mr. Kelly in the  
11 Office of Public Counsel, is that I got a call from him  
12 this morning as I was coming in that the door wasn't  
13 open, so I was on door duty this morning. Mr. Beck, I'm  
14 glad to have you and we were able to get the doors open  
15 and all. It is just one of those things.

16 Ms. Kaufman, good morning to you again, and  
17 you are recognized.

18 MS. KAUFMAN: Good morning, Mr. Chairman.

19 CHAIRMAN CARTER: You may proceed.

20 MS. KAUFMAN: Thank you, Mr. Chairman.

21 CROSS EXAMINATION

22 BY MS. KAUFMAN:

23 Q Good morning, Mr. Ender.

24 A Good morning.

25 Q Welcome back. I'm Vicki Kaufman, I'm

1 appearing here on behalf of the Florida Industrial Power  
2 Users Group, and we met during your deposition by phone,  
3 right?

4 A Yes.

5 Q I just want to follow up on a few questions  
6 that Mr. Wiseman asked you about yesterday regarding the  
7 12 CP and a 13th methodology.

8 As I understood your summary, that is the  
9 cost-of-service methodology that you're recommending  
10 that the Commission use in this case, correct?

11 A That is correct.

12 Q And I think you mentioned in your testimony  
13 that this method has significant regulatory acceptance  
14 in Florida?

15 A That is correct, for over 25 years.

16 Q I won't take you through, I think you  
17 discussed with Mr. Wiseman how that methodology works,  
18 correct?

19 A Yes.

20 Q Now, are you familiar with the 12 CP and 25  
21 percent average demand method?

22 A I am familiar with it.

23 Q And you would agree, wouldn't you, that that  
24 method allocates 25 percent of production costs on an  
25 energy basis?

1 A Yes, it does.

2 Q Are you aware that that was the methodology  
3 approved in the Tampa Electric rate case?

4 A Yes, I am.

5 Q Are you familiar with the 12 CP and 50 percent  
6 average demand methodology?

7 A Yes.

8 Q And are you aware that that's been posed by  
9 Progress Energy in their rate case?

10 A That is correct.

11 Q And that methodology allocates 50 percent of  
12 production costs on an energy basis, correct?

13 A Yes.

14 Q Now, in your rebuttal testimony, at page 4,  
15 line 16 -- are you there, sir?

16 A Yes, I am.

17 Q Actually, the question begins on line 11, but  
18 through the end of the page, you talk about -- and I  
19 think you mentioned this to Mr. Wiseman yesterday -- why  
20 Florida Power & Light believes that the 12 CP and a 13th  
21 works best with the way your system is planned, is that  
22 right?

23 A Yes.

24 Q Can you explain to the Commissioners why that  
25 is the case?

1           A     Yes, I can. The 12 CP and a 13th methodology  
2 accurately reflects the effects of not only -- it  
3 recognizes that both energy and peak demand influence  
4 the type of generation unit that is added, and therefore  
5 the costs that are accurately incurred for that  
6 generation unit. And it recognizes that FPL must meet  
7 its peak demand for the winter, to maintain the reserve  
8 margin of 20 percent for the summer and winter, as well  
9 as being able to meet the peak demands for every month.

10          Q     In your opinion, is the 12 CP and a 13th  
11 method that you've recommended more consistent with  
12 FPL's generation planning than the, say, 12 CP and 25  
13 percent AD?

14          A     They both are valid methodologies. One, of  
15 course, would allocate more energy than the other, the  
16 12 CP 25 AD. I believe that the 12 CP is not an  
17 inappropriate method, but given the long history of  
18 usage by this Commission of 12 CP and a 13th, we are  
19 very comfortable with the use of that method for this  
20 case.

21          Q     And would your answer be the same if I asked  
22 you to compare the 12 CP and a 13th to the 12 CP and 50  
23 percent AD method?

24          A     As I said, yes, I don't have any objections to  
25 the use of that, depends on the facts and circumstances,

1 and I don't think it's an inappropriate method.

2 Q But for FPL you support the 12 CP and a 13th,  
3 correct?

4 A At this time we're supporting the 12 CP  
5 1/13th, and I must also bring to your attention the fact  
6 that at the time that we filed the case, the 12 CP and a  
7 13th methodology was the only methodology approved by  
8 this Commission, and after our filing when the TECO case  
9 was completed is when the 12 CP 25 AD became one of the  
10 methods used by this Commission.

11 Q But in terms of your work and your planning  
12 for FPL, you still believe that the 12 CP and a 13th is  
13 the most appropriate methodology?

14 A Yes, at this time.

15 Q Now, in your direct testimony, beginning on  
16 page 26 -- I'm sorry to keep flipping back and forth,  
17 but since we're doing both together --

18 A That's fine. You said page 26?

19 Q Yes, beginning at the top.

20 Your discussion beginning on line 1 and  
21 continuing on that page, you talk about the fact that  
22 some rate classes are above parity and others are below,  
23 and I think you discussed that perhaps in your summary  
24 yesterday?

25 A Yes.

1           Q     And as I understand your suggestion, and I  
2 think Ms. Deaton's as well, you are suggesting that this  
3 rate case be used to bring all classes to parity, is  
4 that correct, or close to parity?

5           A     Well, I believe it's the right thing to do  
6 from a cost-of-service perspective is to ensure that all  
7 classes pay their fair share, and that is not the case.  
8 I'm not here to testify on the rate design aspect, Ms.  
9 Deaton will do that, but from a cost-of-service  
10 perspective, what the studies show is that there are  
11 certain classes that are earning above the overall rate  
12 of return and certain classes below, and therefore there  
13 is a subsidy going on that should be dealt with anyway.

14          Q     And it's your position that this rate case  
15 should be the vehicle for bringing the classes close to  
16 parity, correct?

17          A     That would be the position of Ms. Deaton. My  
18 position is that the cost of service shows that there is  
19 a need for bringing the classes more in line with their  
20 true cost, the rates in line with their true cost for  
21 each class.

22          Q     Now, Mr. Wiseman had a discussion with you  
23 yesterday about your Exhibit JAE-6, if you could turn to  
24 that. Let me ask you a question before we look at your  
25 exhibit.

1           Are you familiar with the term *rate shock*?

2           A     Yes, I am.

3           Q     How would you define rate shock?

4           A     I mean -- how would I define rate shock?

5           Q     What would you mean by that if you were to use  
6 that term?

7           A     I'd mean a substantial increase in the rates.

8           Q     Do you have an opinion of what would be a  
9 substantial enough increase to cause rate shock?

10          A     Again, the issue -- the answer is yes, I do  
11 have an opinion, but with respect to my testimony, I'm  
12 presenting the cost study that determines what the  
13 position of each class is relative to its current rate  
14 in terms of the cost structure, and a lot of classes are  
15 not carrying their fair share of the cost, and that is  
16 what this shows in this -- this particular schedule  
17 shows that.

18                   As far as the rate shock implications, since  
19 I'm not designing the rates, it's not really something  
20 that is addressed in this particular exhibit.

21          Q     Well, you do have testimony, quite a bit,  
22 about parity and those sorts of issues --

23          A     Yes, I do.

24          Q     -- do you not? And I think you said you do  
25 have an opinion as to what you would consider rate

1 shock. Can you tell us what that would be?

2 A Well, I think that in terms of the parity  
3 issues, I will accept that there are significant  
4 differences between the costs that are being collected  
5 today -- I mean, the costs that are being incurred to  
6 serve certain rate classes as compared to the rates are  
7 just not sufficient. And from that degree, yes, the  
8 impact is significant. However, that's been the way  
9 it's been, and that's the way it is today, and this rate  
10 case gives us an opportunity to deal with those  
11 disparities in the rates.

12 Q Mr. Wiseman asked you about this table, and I  
13 understood your answer, and I understand -- I think I  
14 understand the division of responsibility between you  
15 and Ms. Deaton. However, would you agree that a  
16 customer that sees over a 63 percent increase in their  
17 base revenues might be experiencing rate shock? That's  
18 a yes or no.

19 A Yes. Yes. May I explain, though?

20 Q Certainly.

21 CHAIRMAN CARTER: Make it brief, though.

22 MS. KAUFMAN: Or maybe not.

23 CHAIRMAN CARTER: You can explain, but just  
24 briefly explain your answer.

25 THE WITNESS: It is considered substantial,

1 but again, those classes have been enjoying the benefits  
2 of lower rates at the expense of some other classes, and  
3 from a cost perspective it would be fair to have all  
4 classes carry their own fair share.

5 BY MS. KAUFMAN:

6 Q Are you familiar with the principle of  
7 gradualism?

8 MS. CLARK: Mr. Chairman, I would like to  
9 object to this line of questioning. I think the person  
10 to ask these questions of is Ms. Deaton, who will be on  
11 the stand next. These are rate design and rate issues.  
12 Mr. Ender is here supporting the cost-of-service study.

13 CHAIRMAN CARTER: Ms. Kaufman, to the  
14 objection?

15 MS. KAUFMAN: Mr. Ender talked extensively  
16 about parity in his testimony, and if you look at the  
17 exhibit I've just been examining him about, it shows  
18 these increases that I have been trying to question him  
19 about. I think it's perfectly appropriate and within  
20 the scope of his testimony.

21 CHAIRMAN CARTER: Good morning, Ms. Helton.

22 MS. HELTON: Good morning, Mr. Chairman.

23 MS. CLARK: If I could add one thing, this  
24 chart shows the relative positions of the rate classes.  
25 It's not the rate setting which Ms. Deaton talks about.

1                   CHAIRMAN CARTER: Ms. Helton -- well, Ms.  
2 Kaufman.

3                   MS. KAUFMAN: I think that the concept of  
4 parity that this witness addresses in this exhibit is  
5 directly on point with rate shock and gradualism, and I  
6 think that it's true that Ms. Deaton talks about rate  
7 design, but this witness addresses these issues as well,  
8 and I think I'm entitled to ask him about his exhibit.

9                   CHAIRMAN CARTER: Ms. Helton?

10                  MS. HELTON: Could I confer with Ms. Kimber  
11 for just one second?

12                  CHAIRMAN CARTER: Okay. Briefly.

13                  (Brief pause.)

14                  MS. HELTON: It's my understanding that the  
15 costs are the costs, and that is what this witness, Mr.  
16 Ender, has presented to us, but what the company  
17 proposes and what you do with those costs is a rate  
18 design issue, and the appropriate witness to do that is  
19 Ms. Deaton, who is coming up next. So it seems to me  
20 that this is outside the scope of this witness's direct  
21 testimony and rebuttal testimony.

22                  CHAIRMAN CARTER: The objection is sustained.  
23 Move on, Ms. Kaufman.

24 BY MS. KAUFMAN:

25                  Q     Mr. Ender, let's look for another minute at

1 this Exhibit JAE-6, and you would agree with me, since  
2 you are the cost person, that the column number 5 all  
3 the way to the right and the percentages that are shown  
4 there are what your study shows these classes would  
5 experience in an increase to get to parity?

6 A Yes.

7 Q Are you familiar with the average in excess  
8 cost-of-service methodology that Mr. Pollock talks about  
9 in his testimony?

10 A Yes, I am.

11 Q And I should have asked you this first: You  
12 have reviewed Mr. Pollock's testimony?

13 A Yes, I have.

14 Q Would you agree that under the average in  
15 excess methodology, that 59 percent of the costs are  
16 allocated on an energy basis?

17 A That is correct.

18 Q So that in the event the Commission decided  
19 they wanted to move to a methodology that allocated more  
20 production costs based on energy, the average in excess  
21 demand -- average in excess cost-of-service methodology  
22 would do that, correct? It would allocate more  
23 production based on energy?

24 A Yes, it would. However, the problem that I  
25 have with the average in excess, which I state in my

1 testimony, is that it does not reflect the manner in  
2 which FPL plans their system, and therefore it does not  
3 recognize the cost causation implications.

4 Q Would you agree that under the average in  
5 excess method, residential rates would go down more than  
6 they would under the 12 CP and a 13th? Have you done  
7 that analysis?

8 A I believe that is the case.

9 Q So they would. Just so the record is clear in  
10 regard to what you're recommending and what Mr. Pollock  
11 is recommending, is it your understanding that Mr.  
12 Pollock recommends the average in excess method only if  
13 the Commission doesn't adopt the 12 CP and a 13th?

14 A That is what I understand his testimony to be.

15 MS. KAUFMAN: If I could have just a minute?

16 CHAIRMAN CARTER: Yes, ma'am.

17 (Brief pause.)

18 BY MS. KAUFMAN:

19 Q You calculated the difference, in other words,  
20 how much more would residential rates could go down  
21 under the average in excess as compared to the 12 CP and  
22 a 13th?

23 A I have not done a full study, though.

24 Q Do you have any sense of the magnitude?

25 A Excuse me, can you restate the question again?

1           Q     Yes. I think that a few questions ago you  
2 agreed with me that under the average in excess  
3 methodology as compared to the 12 CP and a 13th,  
4 residential rates would decline more?

5           A     I do not have the impact on the residential  
6 rates. I just have the impact on how much more or less  
7 production costs would be allocated to the residential.

8           MS. KAUFMAN: May I just have one second?

9           CHAIRMAN CARTER: Yes, ma'am.

10          (Brief pause.)

11          MS. KAUFMAN: I have an exhibit, and I  
12 honestly apologize, I don't know if this is in the  
13 record or not, so if I could go ahead and distribute it?

14          CHAIRMAN CARTER: Yes. Let's do this, let's  
15 distribute it and let the parties look it over first  
16 before we go anywhere with it, okay?

17          MS. KAUFMAN: Thank you. Actually, I think  
18 that it may be, because I believe that staff, now we've  
19 entered in FIPUG's first set, all of the  
20 interrogatories.

21          CHAIRMAN CARTER: Give staff an opportunity to  
22 check it out, and then we'll go from there, okay?

23          MS. KAUFMAN: Yes.

24          BY MS. KAUFMAN:

25          Q     Mr. Ender, if you could look at page 2 while

1 that's being distributed.

2 A What part of page 2?

3 Q The chart that is on the bottom half of the  
4 page. Can you take a minute and review that?

5 A I have reviewed it.

6 CHAIRMAN CARTER: Hang on a second.

7 Staff, is this in already in another area?  
8 Give me some advice on this.

9 MS. BENNETT: It was entered. I don't have  
10 the number, but FIPUG entered it.

11 CHAIRMAN CARTER: So it's already in then?

12 MS. BENNETT: My understanding is it's 463.

13 CHAIRMAN CARTER: Okay.

14 BY MS. KAUFMAN:

15 Q Mr. Ender, you have looked at the chart at the  
16 bottom of page 2 of Exhibit 463, and these are -- this  
17 is an excerpt from FIPUG's responses to staff's first  
18 set of interrogatories, and we're just going to look at  
19 interrogatory number 2, and that chart shows the  
20 difference between the 12 CP 1/13th and the average in  
21 excess demand, correct?

22 A Yes, it does.

23 MS. CLARK: Mr. Chairman, I would like to  
24 object to this exhibit. I believe this is something  
25 Mr. Pollock did, not something produced by Mr. Ender. I

1 think it's a little unreasonable to ask him to validate  
2 any of the numbers in here.

3 CHAIRMAN CARTER: I don't think he should be  
4 required to validate any numbers, but he did say he had  
5 read this and he was familiar with it.

6 MS. KAUFMAN: I'm not going to ask him to  
7 validate the numbers, and Ms. Clark is correct that this  
8 is FIPUG's response to some staff discovery. I just  
9 wanted to follow up on the point he already talked  
10 about.

11 Q Would you agree that this chart illustrates  
12 the fact we've just been talking about, about the  
13 difference between the average in excess demand and the  
14 12 CP and 1/13th as it affects residential customers?

15 A Yes, that is what this chart does.

16 MS. KAUFMAN: Thank you, Mr. Chairman.

17 CHAIRMAN CARTER: Thank you, Ms. Kaufman.

18 MS. KAUFMAN: Thank you, Mr. Ender.

19 CHAIRMAN CARTER: Who's next? Ms. Bradley,  
20 are you next?

21 MS. BRADLEY: I'm not sure, but I have no  
22 questions.

23 CHAIRMAN CARTER: Ms. Christensen?

24 MS. CHRISTENSEN: No questions.

25 MR. LAVIA: No questions.

1                   CHAIRMAN CARTER: Okay, let me do this:  
2 Commissioners, anything from the bench before I go to  
3 staff?

4                   Okay, staff, you're recognized.

5                   CROSS EXAMINATION

6 BY MS. WILLIAMS:

7                   Q     Good morning, Mr Ender. My name is Anna  
8 Williams with the Commission. I just have a couple of  
9 questions.

10                   Yesterday when Mr. Wiseman was questioning  
11 you, you stated that the rate classes OL-1 and SL-1  
12 would not be allocated production plant costs using a  
13 summer coincident peak allocation. Can you please  
14 explain why, under a summer coincident peak allocation,  
15 those two rate classes do not get any production plant  
16 allocated?

17                   A     Yes. The reason why the streetlight rate  
18 classes OL-1 and SL-1 would not get any cost allocated  
19 is generally in the summer, the peak occurs during the  
20 daylight hours and the lights are not on, and, therefore  
21 they would make no contribution to the production cost  
22 under that scenario. This is only one hour per year.

23                   Q     If no costs get allocated to the OL-1 and SL-1  
24 rate classes, is it correct to say that those costs get  
25 allocated to other classes?

1           A     Absolutely.

2                     May I add, that is the reason why the 12 CP  
3 and a 13th was approved by the Commission. One of the  
4 reasons was because it provided some cost responsibility  
5 to all rate classes.

6           Q     Now, on page 8 of your rebuttal testimony,  
7 lines 9 through 12, you discuss that the summer  
8 coincident peak methodology increases the revenue  
9 requirement for the residential class by 23.6 million  
10 when compared to FPL's filed methodology. Do you recall  
11 that?

12           A     Yes.

13           Q     Why does the summer coincident peak method  
14 increase the revenue requirement for the residential  
15 class?

16           A     Well, the use of the summer coincident peak  
17 would not recognize the energy component of the energy  
18 usage, and as a result, it would shift costs over to the  
19 higher demand customers like residential and general  
20 service.

21           Q     And that would result in 23.6 million in  
22 additional revenue requirements from the residential  
23 customer as well as 11.1 million for the general service  
24 customer?

25           A     Yes, it would result in \$23.6 million more to

1 the residential and 11.1 more to the general service  
2 rate classes.

3 Q Now, my next few questions relate to the  
4 minimum distribution system, or MDS, method proposed by  
5 SFHHA Witness Baron.

6 On page 11 of your rebuttal testimony, lines 9  
7 through 12, you state that the MDS method shifts all  
8 benefits obtained from economies of scale to the larger  
9 customers. Could you elaborate on that statement,  
10 please?

11 A Yes. The residential customers, there's a lot  
12 of economies of scale. For example, in the case of a  
13 transformer, there could be eight to ten customers that  
14 could use the same transformer. A similar-sized  
15 transformer is that which would be required for one  
16 commercial customer. In addition to that, the diversity  
17 in the load allows us to be able to add more customers  
18 to those transformers, which all are increasing the  
19 benefits of the economies of scale.

20 Q And that is because not all of the maximum  
21 demand from each of the residential customers occurs at  
22 the same time?

23 A That is correct.

24 Q Now, turning to page 15 of your rebuttal,  
25 lines 3 through 6, could you please explain why the MDS

1 method increases the amount of distribution plant  
2 allocated to residential and small commercial customers?

3 A Yes. The MDS method would classify some of  
4 the costs that are now allocated based on demand to  
5 customer, and as a result, it would allocate that based  
6 on the number of customers. Since the residential and  
7 general service class of customers has the most number  
8 of customers, there will be more costs allocated to  
9 those classes, and it would benefit the less customer-  
10 centric classes.

11 Q Now, turning now to Mr. Pollock's testimony,  
12 he stated that the analyses demonstrate that the summer  
13 peak demands determine FPL's capacity requirements, the  
14 other months are irrelevant. Do you agree with that  
15 statement?

16 A No, I don't.

17 MS. KAUFMAN: What page are you on?

18 MS. WILLIAMS: Page 46, lines 3 through 6, of  
19 Pollock's direct testimony.

20 CHAIRMAN CARTER: You may proceed.

21 BY MS. WILLIAMS:

22 Q Do you agree with that statement?

23 A Before I do that, let me take a look at his  
24 testimony. (Examining document.)

25 Could you repeat the question, please?

1           Q     Mr. Pollock states that the analyses  
2 demonstrate that the summer peak demands determine FPL's  
3 capacity requirements, the other months are irrelevant.  
4 Do you agree with that statement?

5           A     I do agree with that statement; however,  
6 they're not irrelevant, because the planning process and  
7 -- used by FPL not only takes into consideration the  
8 summer peak, but it also looks at the impact of the  
9 winter reserve margin as well as the loss of load  
10 probability. In addition, it takes into consideration,  
11 in determining the type of unit that is selected, the  
12 number of hours a unit is expected to run, which is  
13 driven by the energy demands.

14          Q     Could can you explain how you define class  
15 maximum demand?

16          A     Class maximum demand is a demand for a class,  
17 irrespective of when it happens, and generally is a  
18 demand that is not coincident with the system peak  
19 demand.

20          Q     So the class maximum demand can occur at any  
21 time based on when the class experiences the maximum  
22 demand?

23          A     That is correct.

24                MS. WILLIAMS: That's all the questions I  
25 have. Thank you.

1 CHAIRMAN CARTER: Redirect?

2 MS. CLARK: I believe I just had one.

3 REDIRECT EXAMINATION

4 BY MS. CLARK:

5 Q And I may have heard you wrong, Mr. Ender,  
6 when Ms. Williams asked you about the statement by  
7 Mr. Pollock --

8 CHAIRMAN CARTER: One second, Ms. Clark.

9 Anything from the bench?

10 Okay, you may proceed.

11 BY MS. CLARK:

12 Q When Ms. Williams asked you about the  
13 statement by Mr. Pollock on page 46 regarding the summer  
14 peak demands determine capacity requirements, and then  
15 it says the other months are irrelevant, I believe your  
16 answer was that they were not irrelevant, but I was not  
17 sure.

18 A They are not irrelevant.

19 MS. CLARK: Mr. Chairman, I have no further  
20 redirect.

21 CHAIRMAN CARTER: Exhibits?

22 MS. CLARK: FPL would move the admission of  
23 Exhibits 154 through 160.

24 CHAIRMAN CARTER: Hang on one second. Are  
25 there any objections?

1 Without objection, show it done, 154 through  
2 160.

3 MS. CLARK: And additionally, 374 through 378.

4 MS. HELTON: Mr. Chairman, I think we need to  
5 do 154 through 159. My records are showing 160 is Ms.  
6 Deaton's exhibit.

7 MS. CLARK: I beg your pardon.

8 CHAIRMAN CARTER: Okay, to 159. 154 through  
9 159, show it done without objection.

10 (Exhibit Nos. 154 through 159 admitted into  
11 the record.)

12 CHAIRMAN CARTER: Now, on page -- does it  
13 start at 374? Yes, 374 through 378, is that correct?

14 MS. CLARK: Yes, Mr. Chairman.

15 CHAIRMAN CARTER: Are there any objections?  
16 Without objection, show it done.

17 (Exhibit Nos. 374 through 378 admitted into  
18 the record.)

19 CHAIRMAN CARTER: Now, let's go to the back  
20 pages.

21 No. 483, Mr. Wiseman?

22 MR. WISEMAN: Mr. Chair, SFHHA would move the  
23 admission of Exhibit 483.

24 CHAIRMAN CARTER: Any objection?  
25 Without objection, show it done.

1 (Exhibit No. 483 admitted into the record.)

2 CHAIRMAN CARTER: Call your next witness.

3 Thank you, you may be excused.

4 MS. CLARK: Mr. Chairman, FPL would call Ms.  
5 Deaton, and I'm not sure that she has been sworn in.

6 CHAIRMAN CARTER: Okay. Raise your right  
7 hand, please.

8 Whereupon,

9 RENAE DEATON

10 was called as a witness on behalf of Florida Power &  
11 Light Company and, having been duly sworn, was examined  
12 and testified as follows:

13 CHAIRMAN CARTER: Thank you. Please be  
14 seated.

15 Ms. Clark, you may proceed.

16 MS. CLARK: Thank you, Mr. Chairman.

17 DIRECT EXAMINATION

18 BY MS. CLARK:

19 Q Ms. Deaton, would you please state your name  
20 and your business address?

21 A My name is Renae Deaton. My business address  
22 is 9250 West Flagler Street, Miami, Florida.

23 Q By whom are you employed, and in what  
24 capacity?

25 A Florida Power & Light Company, as the Rate

1 Design Manager.

2 Q Have you prepared and caused to be filed 22  
3 pages of direct testimony in this case?

4 A Yes, I have.

5 Q Did you also prepare and cause to be filed one  
6 errata sheet to your direct testimony?

7 A Yes, I have.

8 Q Do you have any other changes or revisions to  
9 your prefiled direct testimony?

10 A No, I do not.

11 Q And with that errata, if I asked you the same  
12 questions contained in your prefiled direct testimony,  
13 would your answers be the same?

14 A Yes, they would.

15 MS. CLARK: Chairman, I would ask that the  
16 prefiled direct testimony of Renae Deaton be inserted in  
17 the record as though read.

18 CHAIRMAN CARTER: The prefiled testimony of  
19 the witness will be inserted into the record as though  
20 read.

21

22

23

24

25

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                   **FLORIDA POWER & LIGHT COMPANY**

3                   **DIRECT TESTIMONY OF RENAE B. DEATON**

4                   **DOCKET NO. 080677-EI**

5

6   **Q.    Please state your name and business address.**

7    A.    My name is Renae B. Deaton. My business address is Florida Power & Light  
8           Company, 9250 West Flagler St., Miami, Florida 33174.

9   **Q.    By whom are you employed and what is your position?**

10   A.    I am employed by Florida Power & Light Company ("FPL" or the  
11           "Company") as the Rate Development Manager in the Rates & Tariffs  
12           Department.

13   **Q.    Please describe your duties and responsibilities in that position.**

14   A.    I am responsible for developing electric rates at both the retail and wholesale  
15           levels. At the retail level, I am responsible for developing the appropriate rate  
16           design for all electric rates and charges. I am also responsible for proposing  
17           and administering the tariff language needed to implement those rates and  
18           charges.

19   **Q.    Please describe your educational background and professional  
20           experience.**

21   A.    I hold a Bachelor of Science in Business Administration and a Masters of  
22           Business Administration from Charleston Southern University. Since joining  
23           FPL in 1998, I have held positions in the rates and regulatory areas. Prior to

1 this, I was employed at South Carolina Public Service Authority (d/b/a Santee  
2 Cooper) for fourteen years, where I held a variety of positions in the  
3 Corporate Forecasting, Rates, and Marketing Departments and in generation  
4 plant operations.

5 **Q. Are you sponsoring an exhibit in this case?**

6 A. Yes. I am sponsoring eight exhibits which are attached to my direct  
7 testimony. They are as follows:

- 8 • RBD-1 – Summary of Sponsored MFRs
- 9 • RBD-2 – FPL Typical Residential 1,000 kWh Bill
- 10 • RBD-3 – Comparison of FPL's Base Rates Versus Change in the  
11 Consumer Price Index
- 12 • RBD-4 – Major Florida Utility Typical Residential Bill Comparisons
- 13 • RBD-5 – Summary of Current Rate Structures
- 14 • RBD-6 – Resulting Parity Indices
- 15 • RBD-7 – Summary of Proposed Rate Structures
- 16 • RBD-8 – Comparison of GBRA Revenue Requirements and Fuel  
17 Savings

18 **Q. Are you sponsoring or co-sponsoring any Minimum Filing Requirements**  
19 **(MFRs) in this case?**

20 A. Yes. The MFRs that I am sponsoring or co-sponsoring are listed on Exhibit  
21 RBD-1. In addition, I am sponsoring the following 2009 supplemental MFR  
22 schedules that FPL has agreed with the Florida Public Service Commission

1 ("FPSC" or the "Commission") Staff and the Office of Public Counsel to file:  
2 MFR C-5.

3 **Q. What is the purpose of your testimony?**

4 A. The purpose of my testimony is to address three general areas. First, I discuss  
5 the forecast of base revenues from the sale of electricity. Next, I address  
6 FPL's proposed target revenues by rate class. Finally, I present the proposed  
7 rate design for achieving the target revenues by rate class.

8 **Q. Please summarize your testimony.**

9 A. FPL's last general base rate increase was in 1985. Since that time, base rates  
10 were reduced in 1990, 1999 and 2002. FPL requested a base rate increase in  
11 2005, but agreed to maintain base rates at then-current levels subject to  
12 adjustment for limited increases associated with generation plant additions.

13  
14 MFR A-2 summarizes the typical bill impacts for the 2010 Test Year and  
15 2011 Subsequent Year as compared to current rates increased for West  
16 County Energy Center (West County) Units 1 and 2, as approved by the  
17 Commission in Order No. PSC-08-0825-PCO-EI. Even with the full base rate  
18 increase, most customers would see an overall decrease in their bills in 2010  
19 based on projected reductions in fuel prices using recent (February 9, 2009)  
20 fuel cost projections. As reflected in my Exhibit RBD-2, the total typical  
21 residential (1,000 kWh) bill is decreasing from \$109.55 in January 2009 to  
22 \$104.63 in January 2010. This is a decrease of \$4.92 or 4.5 percent in 2010.

1 In 2011, the same typical residential bill increases to \$116.47 due to the  
2 Subsequent Year Adjustment and a projected increase in fuel prices.

3  
4 As discussed by FPL witness Ousdahl, FPL expects to include the full in-  
5 service revenue requirements estimate for the nuclear uprate projects in its  
6 Nuclear Cost Recovery clause filings. Therefore, all costs projected for  
7 nuclear uprates are excluded from 2011 base rates. Taking into account  
8 expected increases in base rates for nuclear uprates through the Nuclear Cost  
9 Recovery Rule, the projected 2011 typical residential bill is \$117.21. Overall,  
10 the projected increase from January 2009 to January 2011, given the full base  
11 rate increases as well as projected fuel prices as of February 9, 2009 and the  
12 estimated in-service revenue requirements for the nuclear uprate projects, is  
13 \$7.66, which is an average of only about 3.5 percent per year for the two year  
14 period. Even with this projected increase, FPL customers' typical bills will  
15 still compare favorably with the current prices of other major investor owned  
16 utilities (IOUs) in the state as well as nationally.

17  
18 Other rate classes will see varying decreases in 2010 depending on the current  
19 rate of return (parity) for their respective rate classes. For example, large  
20 commercial customers served under the GSLD-1 or GSLD-2 schedules are  
21 projected to see changes in their bills ranging between a three percent increase  
22 to an eight percent decrease in 2010 and a five percent to 14 percent increase  
23 in 2011 depending on the customer's load characteristics.

1 Traditionally, base rate cases have been used as the vehicle for improving the  
2 parity among rate classes. At FPL, parity among the rate classes has not been  
3 addressed in over 20 years due to the long period of time that FPL was able to  
4 avoid the need for a rate increase and the 2005 settlement, and as a result there  
5 is a need to improve parity as part of this proceeding. This filing presents an  
6 opportunity to adjust rates and charges to more closely reflect the cost of  
7 service and thus address the parity issue. Notwithstanding the above, FPL's  
8 price should still compare favorably.

9  
10 As discussed by FPL witnesses Barrett and Ousdahl, FPL is proposing to  
11 continue utilizing the Generation Base Rate Adjustment (GBRA) mechanism  
12 for limited but necessary base rate increases to account for capital  
13 expenditures associated with generation expansion. FPL customers already  
14 see immediate fuel cost reductions when the generation units are placed in  
15 service through the fuel cost recovery clause, and continuation of the GBRA  
16 simply puts recovery of generation costs on the same basis from a timing  
17 perspective as the recognition of the fuel savings. Continuation of the GBRA  
18 will allow FPL to address generation-related base rate requirements during  
19 and beyond the 2011 Subsequent Year in an efficient manner while promoting  
20 rate predictability and stability.

1 The Commission should approve FPL's rate proposals and continuation of the  
2 GBRA mechanism as presented in this testimony because they are reasonable,  
3 cost-based and send the appropriate price signals to customers.

4

5

#### HISTORICAL SUMMARY OF FPL RATES

6

7 **Q. Please provide a historical overview of FPL rates.**

8 A. FPL has not proposed an increase in its retail base rates since Docket No.  
9 050045-EI (2005 Rate Case) that was initiated in March 2005. That case  
10 resulted in a settlement agreement (2005 Settlement Agreement) that held  
11 FPL's base rates flat while providing for limited but necessary increases to  
12 account for capital expenditures associated with generation expansion through  
13 the GBRA. With the noted exception of the GBRA-related adjustments, no  
14 other general increase in base rates has occurred since that time and in fact,  
15 the last general FPL base rate increase occurred in 1985 (Docket No.  
16 830465-EI).

17

18 FPL has reduced its retail base rates three times since the 1985 decision. In  
19 January 1990, base rates were reduced by \$38 million as a result of a review  
20 of the Company's earnings following a reduction in the corporate income tax  
21 rate (Docket No. 890319-EI). In April 1999, base rates were reduced by \$350  
22 million as a result of a settlement agreement (Docket No. 990067-EI). Then  
23 in April 2002, a second settlement agreement (Docket No. 001148-EI)

1 reduced base rates by another \$250 million. In addition, the three settlement  
2 agreements in 1999, 2002 and 2006 provided for annual revenue rebates to  
3 customers based on prescribed revenue thresholds. In total, these three rate  
4 agreements are estimated to have resulted in over \$6 billion dollars in  
5 customer savings by the end of 2008.

6 **Q. What type of impact does this have on retail bills?**

7 A. As a result of these reductions, FPL's January 2009 typical residential bill is  
8 17 percent lower than it was 24 years ago while consumer prices, as measured  
9 by the Consumer Price Index (CPI), have increased 99 percent. To put this in  
10 perspective, a typical residential customer consuming 1,000 kWh in 1985  
11 would be paying \$165.60 in January 2009 had base rates increased by the rate  
12 of inflation. This is \$56.05 or 34 percent higher than the actual January 2009  
13 typical residential bill. Exhibit RBD-3 outlines this price comparison.  
14 Extending this comparison we see in Exhibit RBD-4 that the FPL January  
15 2009 typical residential bill is the lowest among Florida's major IOUs.  
16 Additionally, according to available data from the Florida Municipal Electric  
17 Association and the Edison Electric Institute, FPL's typical residential bill is  
18 18 percent lower than the average electric bill in Florida, and 17 percent lower  
19 than the national average.

## OVERVIEW OF BASE REVENUES AND RATE STRUCTURES

1  
2  
3 **Q. What is meant by base revenues from the sale of electricity?**

4 A. This revenue represents FPL's total billed revenues from the sale of electricity  
5 less revenues generated from adjustment clauses. With the base rate increase,  
6 current projections indicate that base revenue will make up approximately 49  
7 percent of the total bill for a standard 1,000 kWh of residential use.

8 **Q. How are base revenues from the sale of electricity determined?**

9 A. Base revenues from the sale of electricity are determined by applying the  
10 applicable base rate tariff charges, excluding the cost recovery adjustment  
11 clause factors, to the appropriate billing determinants. As described in Exhibit  
12 RBD-5, FPL has more than 40 retail rate schedules, each with its own set of  
13 tariff charges and billing determinants.

14 **Q. What is meant by billing determinants?**

15 A. Billing determinants are the parameters used for billing customers. The  
16 applicable billing determinants reflect the rate structure established for a given  
17 rate schedule. Customer, demand and energy charges are each associated with  
18 their own set of billing determinants. Customer billing determinants are  
19 expressed in terms of the number of accounts billed by month. Demand  
20 billing determinants are expressed in terms of kilowatts (kW) at the peak of  
21 customer demand during a month, while energy billing determinants are  
22 expressed in terms of kilowatt-hours (kWh). Some rate schedules are limited  
23 to customer and energy billing determinants. For example, customers in the

1 small general service rate schedule (GS-1) are charged a customer charge and  
2 a cents per kWh energy charge. GS-1 customers represent the smallest of the  
3 commercial/industrial electric customers, those with maximum demands  
4 below 21 kW, and their rate does not include a demand charge. Larger  
5 commercial/industrial customers, on the other hand, are charged on the basis  
6 of their demand, i.e., the maximum electric usage in a given time period, and  
7 energy. Thus, the rate structure for the general service demand rate schedules  
8 e.g. GSD-1, includes a customer charge, a cents per kWh energy charge and a  
9 dollar per kW demand charge.

10 **Q. What are the current rate structures for the major rate schedules?**

11 A. Exhibit RBD-5 provides a narrative explanation of the current rate structures  
12 of FPL's major rate schedules.

13

#### 14 **FORECAST OF BASE REVENUES**

15

16 **Q. What were the major inputs used to produce the forecast of retail base  
17 revenues from the sale of electricity for 2010 and 2011?**

18 A. The major inputs in the process were the customer and energy (kWh) sales  
19 forecasts by revenue class produced by FPL witness Morley and the cost of  
20 service data produced by FPL witness Ender.

21 **Q. What is the difference between revenue classes and rate schedules?**

22 A. Revenue classes represent general categories of customers used for financial  
23 reporting purposes. There are six retail revenue classes: residential,

1 commercial, industrial, street and highway lighting, railroads and other. The  
2 revenue classes are a combination of different rate schedules with the  
3 exception of the railroads revenue class. This class is the only class specific  
4 to a particular rate schedule: the Metropolitan Transit Service (MET) rate  
5 schedule. In order to provide the level of detail required in the MFR-E  
6 Schedules, the forecasts of sales and customers by revenue class were  
7 converted into forecasts of sales and customers by rate schedule.

8 **Q. What is the difference between rate classes and rate schedules?**

9 A. Rate classes are groups of individual rate schedules with like billing attributes  
10 (customer type and load size) and rate design relationships, so they are treated  
11 for rate design purposes on a combined basis. As a result, one or more rate  
12 schedules may be combined into a single rate class. For example, residential,  
13 Rate Schedule RS-1, and residential time-of-use, Rate Schedule RST-1, are  
14 combined together into the RS(T)-1 rate class.

15 **Q. Please describe the steps for developing the forecast of base revenue.**

16 A. First, the billing determinant forecast for customers, kWh sales and kW  
17 demand, is developed by rate schedule. Next, these billing determinants are  
18 applied to the currently applicable rates to provide the base revenue forecast  
19 for the appropriate time periods. These rates include the GBRA-related  
20 adjustments approved to take effect in 2009. Then the rate components are  
21 updated using the per unit cost data provided in MFR E-6b. This will move  
22 the revenue by rate class toward parity and toward the targeted revenue

1 amounts. Finally, adjustments are made to achieve target revenue levels and  
2 also to make adjustments where full parity can not be achieved.

3 **Q. How is the billing determinant forecast developed?**

4 A. The customer and sales forecast is provided by FPL witness Morley for the  
5 appropriate time period. This forecast is developed on a revenue class basis  
6 and must be expanded to the rate class level.

7  
8 Next, the forecast for the number of customers and kWh sales by rate schedule  
9 is developed based on the historical relationship between customers and sales  
10 by rate schedule and customers and sales by revenue class. Historical  
11 percentages are applied to the forecast of customers and sales by revenue  
12 class. The result is a forecast of sales and customers by retail rate schedule for  
13 the appropriate time period, in this case the years 2010 and 2011.

14  
15 Finally, additional derivations are made to complete the forecast of customer  
16 and energy billing determinants by rate schedule. For example, the kWh sales  
17 for RS-1 are segmented to reflect the inverted rates described in Exhibit  
18 RBD-5. Likewise, for time-of-use rate schedules, total sales are segmented  
19 between on-peak and off-peak sales based on historical patterns. In addition,  
20 for demand-metered rate schedules, billing demands are developed based on  
21 the historical relationship between billing demand and billed sales by rate  
22 schedule.

1 **Q. Are there any exceptions to the process as described?**

2 A. Yes. Specific sales and customer forecasts are developed for certain rate  
3 schedules. For example, Commercial/Industrial Load Control (CILC) rate  
4 schedules are closed to new customers. Therefore, the forecasted number of  
5 customers and kWh sales under those rate schedules is based on their actual  
6 values during the last 12 months ending December 2008. These exceptions  
7 are limited to a small number of customers.

8 **Q. Which MFRs provide detail on the retail base revenue forecast described  
9 above?**

10 A. The currently-approved base tariff charges adjusted for the approved GBRA  
11 base rate increases are shown on MFR A-3. MFR E-15 provides a description  
12 of how the projected billing determinants were developed. The results of  
13 applying the base tariff charges to the projected billing determinants are  
14 provided in MFR E-13c. Additional detail on the base revenue forecast for  
15 the lighting rate schedules is given in MFR E-13d.

16 **Q. What does FPL's cost of service study show regarding the system average  
17 Rate of Return (ROR) and the parity indices by rate class?**

18 A. As explained by FPL witness Ender, FPL's cost of service study shows a  
19 system average earned ROR of 4.25 percent for the 2010 Test Year and 3.71  
20 percent for the 2011 Subsequent Year. This is consistent with the retail ROR  
21 reported in MFR A-1. The cost of service study indicates that the parity  
22 indices vary by rate class with some class indices well above 100 percent and  
23 others well below 100 percent.

**TARGET REVENUES BY RATE CLASS**

22

**Q. How are target revenues by rate class, as shown on MFR E-14, determined?**

A. FPL has set the target revenues by rate class in order to obtain parity among the rate classes to the greatest extent possible. In a rate case proceeding in which an adjustment in rates is proposed, the cost of service serves as a guide in evaluating any proposed changes in the level of revenues by rate class. More specifically, the allocation of any revenue increase should be assessed in terms of its impact on the parity between rate classes. Also, the relationships between rate classes must be maintained to avoid unintentional migration that may impact the rate classes' parity going forward. The general service demand rates were considered together to determine target revenues in order to preserve the relationships between the general service demand rates and the corresponding time of use rates, high load factor rates, curtailable service rates and the seasonal demand riders.

**Q. What impact would FPL's target revenues by rate class have on parity?**

A. As shown in Exhibit RBD-6, under FPL's proposed target revenues by rate class, the parity of all rate classes is improved. In fact, with the proposed rates, the number of rate classes within 10 percent of parity more than tripled in 2010. This results in 99.8 percent of all FPL customers being within 10 percent of parity.

1 **Q. How does FPL propose to achieve these target revenues by rate class?**

2 A. FPL proposes to achieve these target revenues through changes to existing  
3 rates and revisions to service charges. Both the rates and service charges are  
4 based on cost forecasts that result in the need for the target revenues. In the  
5 remainder of this testimony, each element of FPL's proposal will be outlined  
6 in detail.

7

8 **PROPOSED CHANGES TO EXISTING RATES**

9

10 **Q. Please explain why FPL is proposing changes to its existing rates.**

11 A. FPL is proposing to change its existing rates in order to support the target  
12 revenues by rate class outlined above. The changes to existing rates outlined  
13 below are consistent with the objectives of providing rates that are cost-based,  
14 understandable and that send appropriate price signals to customers.

15 **Q. Please describe in general terms the methodology you used in developing  
16 the proposed changes to FPL's existing rates.**

17 A. Generally speaking, the inputs include the target revenues by rate class  
18 presented in MFR E-8, the unit costs at the required ROR presented in MFR  
19 E-6b and the projected revenues and billing determinants by rate schedule  
20 presented in MFR E-13c. As appropriate, the unit costs in MFR E-6b are used  
21 as a starting point and then adjustments are made to achieve the target revenue  
22 by rate class outlined above.

1 **Q. What specific details are available that outline how other changes FPL is**  
2 **proposing to its existing rates were developed?**

3 A. Attachment 2 of MFR E-14 provides work papers outlining the derivation of  
4 the proposed changes to FPL's existing rates. In addition, Exhibit RBD-7  
5 provides a narrative explanation of the proposed rate structures, much the  
6 same way that Exhibit RBD-5 outlines the current rate structures.

7 **Q. How does FPL propose to recover its target revenue from the lighting**  
8 **rate classes?**

9 A. Attachment 3 to MFR E-14 provides the estimated cost of installing and  
10 maintaining new street lighting fixtures, poles and conductors. These figures  
11 suggest that the cost of installing and maintaining new poles and conductors  
12 substantially exceeds the charges under the current tariff. The target revenue  
13 increases for SL-1 and OL-1 are achieved primarily through increases in the  
14 pole and conductor charges, with other adjustments as needed to achieve the  
15 classes' target revenues. In addition, the base energy charges for SL-1 and  
16 OL-1 are based on the energy unit cost in MFR E-6b.

17 **Q. Which MFRs provide additional information on the proposed changes to**  
18 **existing rates you have outlined?**

19 A. The impact the proposed rate changes would have on typical bills is presented  
20 in MFR A-2. MFR A-3 provides a summary of the proposed rate changes.  
21 The applicable proposed tariff sheets are presented in Attachment 1 of MFR  
22 E-14. The revenue impact from the proposed changes to existing rates is  
23 taken into account in calculating the revenues shown in MFRs E-12, E-13a,

1 E-13c and E-13d and the parity indices under proposed rates are shown in  
2 MFR E-8.

3 **Q. Are there any other tariff modifications FPL is proposing?**

4 A. Yes. MFR E-14 shows the proposed changes to the SL-1 and PL-1 lighting  
5 rate schedules. FPL is proposing to close the re-lamping option on the SL-1  
6 and OL-1 tariffs for new streetlight installations. Customers choosing this  
7 option often believe that FPL is responsible for all maintenance instead of just  
8 re-lamping. This often results in customer dissatisfaction. FPL believes that  
9 removing this option will make maintenance responsibilities more clear. FPL  
10 is also proposing to remove the 10 year and 20 year facilities payment options  
11 from the PL-1 tariff. First, the 10 year option is rarely used. However, the  
12 main reason for FPL proposing to remove the 10 year and 20 year payment  
13 options is due to the collections issues that often occur when the original  
14 customer requesting the payment option (e.g. a developer) transfers payment  
15 responsibility to another party (e.g. a homeowner's association).

16  
17 Additionally, FPL is proposing to close the Wireless Internet Electric Service  
18 (WIES) rate to new customers. Currently, FPL only has 18,240 kilowatt  
19 hours of load on the WIES rate. The tariff provides that FPL may withdraw  
20 the rate and transfer existing customers to the otherwise applicable rate  
21 schedule if the total annual energy under this rate schedule does not meet a  
22 minimum threshold of 360,000 kWh by June 30, 2004. Rather than withdraw

1 the rate and transfer the existing customers, FPL proposes to close the rate  
2 schedule to new customers.

3 **Q. Is FPL proposing any new rate schedules or riders?**

4 A. No. FPL introduced several new rate schedules and riders in its 2005 rate  
5 case that have provided significant benefits to many commercial/industrial  
6 (C/I) customers and these rates continue to provide opportunities for  
7 additional C/I customers to reduce their electric bills. In the previous rate  
8 proceeding, the company introduced the following new optional rate  
9 offerings: the Seasonal Demand Time of Use Rider (SDTR), the High Load  
10 Factor Time of Use (HLFT) rate and the General Service Constant Use  
11 (GSCU) rate. Many customers have taken advantage of these new optional  
12 rate offerings and are continuing to experience savings as compared to the  
13 standard rate offerings.

14

15 In response to C/I customers who wanted to take advantage of a time-of-use  
16 rate but were unable to plan around the eight to nine hour on-peak window  
17 year-round, the SDTR was created. To address this need, the SDTR provides  
18 a time-differentiated rate with a narrower on-peak window than is specified  
19 under the standard TOU rates. Customers who typically experience lower  
20 usage during the summer months have taken advantage of the optional SDTR,  
21 including educational, governmental and manufacturing customers.

1 The HLFT rate offers an attractive rate to customers with higher load factors  
2 while also providing a time-differentiated price signal. Customers who have  
3 benefited from the HLFT rate include those in the retail, healthcare,  
4 governmental and educational sectors. The optional SDTR and the HLFT  
5 rates are available to all distribution level demand-metered C/I customers.

6  
7 Based on input from our customers, FPL introduced the GSCU rate for non-  
8 demand metered commercial customers which provides savings to small  
9 commercial customers with a relatively constant, high load factor usage such  
10 as telecommunications and cable television industry customers.

11  
12 These newer optional rates continue to offer customers the opportunity to  
13 reduce costs through changes in their consumption patterns. FPL continues to  
14 work with customers to help them take advantage of these recent rate  
15 offerings and optimize utilization of these rates.

16 **Q. Is FPL proposing to adjust the level of its service charges?**

17 A. Yes. The proposed adjusted level of service charges is outlined in MFR  
18 E-13b.

19 **Q. What types of miscellaneous services are provided under FPL's tariff?**

20 A. FPL's tariff outlines specific charges for initial connects on new premises,  
21 connects/disconnects on existing premises, reconnects after non-payment and  
22 field collections on past due accounts. The tariff additionally provides for late  
23 payment fees and returned check charges. Charges for the reimbursement of

1 unauthorized or fraudulent use of electricity and temporary construction  
2 accounts are also included in the tariff. No new services are being proposed at  
3 this time.

4 **Q. Has FPL performed a study estimating the cost of providing**  
5 **miscellaneous services?**

6 A. Yes. As co-sponsored by FPL witnesses Santos and Spoor, MFR E-7  
7 provides estimates of the current cost of initial connects on new premises,  
8 connects/disconnects on existing premises, reconnects after non-payment and  
9 field collections on past due accounts. As FPL witness Santos testifies, in  
10 many cases, the current cost of providing a service exceeds its currently-  
11 approved tariff charge.

12 **Q. Has the revenue impact from adjusting service charges been taken into**  
13 **account in calculating the revenue increase needed to meet the target**  
14 **revenues by rate class for the Test Year?**

15 A. Yes. As shown in MFR E-8, the increase in service charge revenues is taken  
16 into account in calculating the revenue increase needed to meet the target  
17 revenue by rate class. In effect, the increase in service charge revenues helps  
18 offset the needed increase in revenues from the sale of electricity proposed for  
19 each rate class.

**Q. How would the GBRA mechanism be utilized?**

A. As discussed by FPL witnesses Barrett and Ousdahl, FPL proposes to continue to utilize the GBRA mechanism to adjust base rates in the same manner as has been used for Turkey Point Unit 5 and will be used as previously approved in Docket No. 080001-EI for the West County Units 1 and 2. Pursuant to the 2005 Settlement Agreement, the GBRA is implemented by adjusting base charges and non-clause recoverable credits (e.g. the transformer rider credits and the curtailable service credits) by an equal percentage. The calculation of this percentage change in rates is based on the ratio of jurisdictional annual revenue requirement, as presented in the need determination proceeding, and the forecasted retail base revenues from the sales of electricity during the first twelve months of operation. This ratio is the GBRA Factor. The GBRA Factor is applied to FPL's current base charges and non-clause recoverable credits to produce the revised base rate charges. To the extent the actual capital expenditures are less than the projected costs used to develop the initial GBRA Factor, a one-time credit will be made through the capacity clause. In order to determine the amount of this credit, a revised GBRA Factor will be computed using the same data and methodology incorporated in the initial GBRA Factor, with the exception that the actual capital expenditures will be used in lieu of the capital expenditures the need determination was based on. On a going forward basis, base rates

1 will be adjusted to reflect the revised GBRA Factor. The difference between  
2 the cumulative base revenues since the implementation of the initial GBRA  
3 Factor and the cumulative base revenues that would have resulted if the  
4 revised GBRA Factor had been in-place during the same time period will be  
5 credited to customers through the capacity clause with interest at the 30-day  
6 commercial paper rate as specified in Rule 25-6.109.

7 **Q. What impact will continuation of the GBRA have on retail rates?**

8 A. As experienced with the implementation of the GBRA for the Turkey Point  
9 Unit 5, the increase in base rates is largely offset by fuel savings for the new  
10 unit. It is anticipated that this will also be the case for West County Units 1, 2  
11 and 3. Customers already are able to immediately realize the savings  
12 associated with these new, highly efficient units through the fuel cost recovery  
13 clause. Thus, the overall customer impact is largely offset. As shown on  
14 Exhibit RBD-8, the increase in retail rates is largely offset by the reductions in  
15 fuel costs realized when the plant goes into service. Increasing base rates  
16 through the use of the GBRA for these units simply aligns the timing of the  
17 base rate increase with realization of the fuel savings without a costly base  
18 rate case. Continuation of the GBRA will allow FPL to address base rate  
19 requirements during and beyond the 2011 Subsequent Year in an efficient  
20 manner while promoting rate predictability and stability.

21 **Q. If the requested base rate relief is granted, how will FPL's typical**  
22 **residential bill compare to other Florida IOUs?**

1 A. As shown on RBD-2, a typical residential bill is projected to be \$104.63 in  
2 2010 and \$117.21 in 2011. Even with the requested increases, however,  
3 FPL's typical bill should remain competitive based on the comparison of the  
4 typical bill of the other major IOUs shown in Exhibit RBD-3. While prices  
5 are projected to increase in 2011, FPL typical bills should still be competitive  
6 compared with the current prices of other major IOUs in the state as well as  
7 with other electric utilities nationally.

8  
9 The Commission should approve FPL's rate proposals and continuation of the  
10 GBRA mechanism as presented in this testimony because they are reasonable,  
11 cost-based and send the appropriate price signals to customers.

12 **Q. Does this conclude your direct testimony?**

13 A. Yes.

1 BY MS. CLARK:

2 Q Are you also sponsoring any exhibits to your  
3 direct testimony?

4 A Yes, I am.

5 Q Do those exhibits consist of RBD-1 to RBD-9?

6 A In direct? Eight.

7 Q Yes, in direct is RBD-1 through 8?

8 A Yes.

9 Q And are those exhibits true and correct to the  
10 best of your knowledge?

11 A With the errata to RBD-2.

12 MS. CLARK: Mr. Chairman, I would note that  
13 Ms. Deaton's exhibits have been premarked for  
14 identification as 160 and I think through 167. I seem  
15 to be one number off, so I'd like to check and make  
16 sure.

17 CHAIRMAN CARTER: Staff, help me out. I've  
18 got 160 through 167. Is that right, staff?

19 MS. BENNETT: 167 is the last of Ms. Deaton's,  
20 I'm going backwards today, and 160 is the first of her  
21 direct.

22 CHAIRMAN CARTER: Ms. Clark, you may proceed.

23 (Exhibit Nos. 160 through 167 marked for  
24 identification.)

25 / / / / /

1 BY MS. CLARK:

2 Q Ms. Deaton, have you also prepared and caused  
3 to be filed 15 pages of rebuttal testimony?

4 A Yes, I have.

5 Q Did you also prepare and cause to be filed one  
6 errata sheet to your rebuttal testimony?

7 A I don't think so.

8 Q Okay. If I ask you the same questions  
9 contained in your rebuttal testimony, would your answers  
10 be the same?

11 A Yes, they would.

12 MS. CLARK: Chairman Carter, I would ask that  
13 her rebuttal testimony be inserted in the record as  
14 though read.

15 CHAIRMAN CARTER: The prefilled testimony of  
16 the witness will be inserted into the record as though  
17 read.

25

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                   **FLORIDA POWER & LIGHT COMPANY**

3                   **REBUTTAL TESTIMONY OF RENAE B. DEATON**

4                   **DOCKET NO. 080677-EI**

5                   **AUGUST 6, 2009**

6  
7   **Q.    Please state your name and business address.**

8    A.    My name is Renae B. Deaton. My business address is Florida Power & Light  
9           Company, 9250 West Flagler St., Miami, Florida 33174.

10 **Q.    Did you previously submit direct testimony in this proceeding?**

11   A.    Yes.

12 **Q.    Are you sponsoring any rebuttal exhibits in this case?**

13   A.    Yes. I am sponsoring the following rebuttal exhibit:

- 14           • RBD-9, Impacts of Imposing Rate Increase Limitations  
15           • RBD-10, FPL's Bill Lowest in Florida

16 **Q.    What is the purpose of your rebuttal testimony?**

17   A.    The purpose of my testimony is to rebut the testimony of the Florida Industrial  
18           Power Users Group's (FIPUG's) witness Pollock, the South Florida Hospital and  
19           Healthcare Association's (SFHHA's) witnesses Baron and Kollen, and the  
20           Association For Fairness in Rate Making's (AFFIRM's) witness Klepper.  
21           Specifically, I will address FPL's proposed rate design as it relates to parity and  
22           proposed rate increases by rate class, the design of general service demand rates,  
23           issues related to the GBRA, and issues related to conjunctive billing.

**SUMMARY**

1

2

3 **Q. Please summarize your rebuttal testimony.**

4 A. A primary purpose of my rebuttal testimony is to refute the claim that rate  
5 increases should be limited to 1.5 times the system average increase, rather than  
6 taking the opportunity to achieve parity and eliminate years of subsidizations  
7 between the rate classes.

8

9 In developing its revenue increase allocation guideline, the Florida Public Service  
10 Commission (FPSC or Commission) recognized that limits may be needed in  
11 instances where a customer would see a significant impact on a total bill basis. In  
12 this case, however, this guideline is not necessary or appropriate. Exhibit RBD-9  
13 clearly demonstrates that on average, customers are projected to see an overall  
14 decrease in their total bill in January 2010. Imposing an artificial limit of "1.5  
15 times the system average" on individual rate classes would perpetuate the  
16 continued subsidization of certain classes by an excess of \$40 million. Under  
17 proposals offered by intervenors, these subsidies would grow even larger (\$65  
18 million to over \$190 million as noted in SJB-10 and SJB-9 from SFHHA witness  
19 Baron).

20

21 I also address several misconceptions that intervenors have as it relates to  
22 previously-approved rate design methodology. Specifically I will address the  
23 development of CILC rates and related target revenue, the development of the

1 general service demand rates, and the appropriate venue for the CDR rider  
2 development.

3  
4 Finally, I will demonstrate that the implementation of the GBRA is not a radical  
5 or complicated matter, as asserted by SFHHA witness Kollen, given the full  
6 implementation of the GBRA for Turkey Point Unit 5, the subsequent  
7 \$5.5 million rate reduction true-up to reflect the actual capital cost of the plant,  
8 and approval for implementation of base rate increases for West County Units 1  
9 and 2. Furthermore, I will discuss the overall benefits of the continuation of the  
10 GBRA mechanism as it relates to sending appropriate price signals to customers  
11 as well as the contribution of the power plants eligible for GBRA treatment, in  
12 conjunction with past efficiency improvements of the fossil fleet discussed by  
13 FPL witness Hardy, to fuel savings that are estimated to reach \$1 billion per year  
14 by 2014.

15

16 **REBUTTAL OF FIPUG WITNESS POLLOCK**

17

18 **Q. Do you agree with FIPUG witness Pollock's assertion at pages 56-57 of his**  
19 **testimony that the concept of gradualism should be applied to class revenue**  
20 **allocation in this case?**

21 **A.** No. FPL's proposal appropriately reflects the allocated costs by rate class and  
22 provides an opportunity to address inequities between the rate classes at a time  
23 when overall bills are projected to decrease for most customers in 2010 with

1 moderate increases in 2011. Taking a more gradual approach and not moving to  
2 parity to the fullest extent practicable now would result in the continued  
3 subsidization of certain rate classes by others. Furthermore, FPL cannot predict  
4 with any certainty the next opportunity to address parity, and it might not occur  
5 for a number of years. Given this uncertainty, a gradual approach would allow  
6 these subsidies to continue longer than necessary.

7  
8 For a number of years, medium and large commercial and industrial (C/I)  
9 customers have benefited from a subsidy by residential and small commercial  
10 customers. It would be unfair to residential and small commercial customers to  
11 allow this subsidy to continue unnecessarily.

12  
13 Had FPL been implementing general rate increases over the past 24 years on a  
14 regular basis, and thus been able to maintain appropriate parity levels, the  
15 subsidies that exist today, to a large extent, could have been prevented. However,  
16 FPL has been able to avoid a general base rate increase, except for limited  
17 increases associated with GBRA, for 24 years, and has even lowered rates three  
18 times in this period. Thus there is a need to address subsidies between rate classes  
19 that have arisen during this time and ensure equitable rates on a going forward  
20 basis.

1 Q. FIPUG witness Pollock states in his testimony at pages 56 - 57 that the  
2 Commission recently addressed class revenue allocation in the TECO rate  
3 case by limiting the lighting class increase to 150% of the system average,  
4 and that therefore all rate class increases in this case should be limited to  
5 150% of the retail average base rate increase. Do you agree?

6 A. No. Parity discrepancies in the TECO case were not as large as in this case which  
7 is why the 150% cap only needed to be applied to the lighting rate class. In prior  
8 cases the Commission has used a guideline or what could be called a "rule-of-  
9 thumb" to limit rate increases to an individual rate class to mitigate bill impact.  
10 At the same time, however, the Commission has made clear its goal that rates  
11 should be based on the fully allocated cost-of-service methodology with the goal  
12 of achieving full parity among rate classes. In the FPSC Order that first instituted  
13 the rule-of-thumb, the Commission clearly indicated that this guideline was  
14 designed to mitigate the impact of the total customer bill, not out of some general  
15 principle of slowly moving toward parity and allowing cross-subsidization to  
16 continue. The Commission states on pages 106-107 in Order No. 10306  
17 approving FPL's request for a rate increase in Docket No 810002 as follows: "All  
18 parties in this proceeding agree that the revenue increase should be allocated  
19 between classes so as to move toward an equalized rate of return for all classes.  
20 While we embrace this concept, we feel the impact on *customers' bills* must be  
21 considered in allocating revenues" (emphasis added).

1 **Q. Are there other cases in which the Commission has deviated from the rule-of-**  
2 **thumb?**

3 A. Yes. The Commission also recently addressed revenue allocation in the People's  
4 Gas System (PGS) case (Docket No. 080318). In the PGS case, the Commission  
5 approved Staff's recommendation on rate design which, as discussed by Staff on  
6 page 2 of its recommendation, veered from the Commission guidelines. The  
7 result was that the Commission allowed increases to rate classes greater than  
8 150% of the 11.17% system average, from 180% to over 400% (See PSC Order  
9 No. 09-0411-FOF-GU, schedule 7). On page 42 of the Commission's Final Order  
10 it stated, "The distribution charges are set at a level which, in combination with  
11 the customer charge, will result in the recovery of the total base revenues  
12 allocated to each rate class."

13  
14 In a Gulf Power rate case, the Commission also recognized the need to deviate  
15 from its general guidelines (Docket 810136-EU). On pages 29-30 of Order No.  
16 10557 the Commission said: "we are departing from our policy in previous cases  
17 of limiting the increase to any one class to no more than 1.5 times the system  
18 average increase. Were we to apply that policy in this case, some classes whose  
19 present rates of return are above parity would receive an increase. Thus, the  
20 greater equity lies in allocating the increase to those rate classes with substantially  
21 lower rates of return."

1 **Q. What meaning do you ascribe to the Commission's reference to "the greater**  
2 **equity"?**

3 A. That it is inherently fair and equitable to align each rate class's revenues with its  
4 cost of service. FPL's proposal does just that. Limiting the revenue increase to  
5 any individual rate class to a certain threshold may appear to be equitable, but the  
6 benefits of doing so should be balanced against the added revenue burden other  
7 customers would be required to bear and the disparities in parity by rate class  
8 which would continue as a result. As the Commission found in the Gulf case, the  
9 revenue burden on other customers and the disparities in parity by rate class can  
10 be such that the use of the rule-of-thumb is inequitable.

11 **Q. What would be the consequences of applying the rule-of-thumb in this case?**

12 A. As shown in column (e) of Exhibit RBD-9, \$43 million would be shifted from  
13 some rate classes to other rate classes. The residential (RS-1) class would end up  
14 shouldering the bulk of the subsidization, as target revenues would need to be  
15 increased an additional \$28 million. The GSD-1 rate class would be allocated  
16 most of the remaining subsidization as it would receive an additional increase of  
17 \$11 million. The GSLD-1 and HLFT-2 rate classes would receive most of the  
18 benefit in a \$33 million reduction in target revenues.

19 **Q. Is FPL's approach of moving to parity to the greatest extent practicable**  
20 **preferable?**

21 A. Yes. FPL's approach is preferable as it strives to eliminate subsidization among  
22 the rate classes, thus sending appropriate price signals. This is not only consistent  
23 with prudent utility rate-making concepts but also with the Commission's goals

1 regarding parity. FPL's approach considers the overall impact on the customer's  
2 bill, which for most customers will be lower in 2010. Thus we find ourselves in a  
3 somewhat unique scenario under which we are able to implement the necessary  
4 base rate increase and ensure full parity between rate classes to the greatest extent  
5 practical with minimal impact to customers.

6 **Q. FIPUG witness Pollock states on page 58 of his testimony that, "FPL has**  
7 **under-priced the demand charge and over-priced the energy charge (based**  
8 **on FPL's proposed revenue levels)." Do you agree with this statement?**

9 A. No. The cost-of-service, as proposed, was closely followed in the rate design  
10 process. Following a strict unit rate for demand charges would distort the  
11 relationships between the general service demand classes and make it difficult to  
12 achieve target revenue while maintaining time-of-use (TOU) design goals and  
13 principals. As outlined in my direct testimony, limited adjustments were made to  
14 the general service demand rates to maintain the appropriate relationships  
15 between rate schedules within the general service demand classes. Additionally,  
16 adjustments were made to energy charges for the purposes of meeting target  
17 revenue levels by rate class.

18 **Q. Do you agree with FIPUG witness Pollock's statement on page 61 of his**  
19 **testimony that "HLFT rates are a derivative of the GSLDT rates"?**

20 A. No. This is incorrect as the GSDT, the GSLDT and HLFT rates are options to, or  
21 derivatives of, the corresponding GSD and GSLD rates. FIPUG witness Pollock  
22 goes on to recommend using a target load factor of 70% in designing the HLFT

1 rates. MFR E-14, Attachment 2, pages 14 – 16 shows that 70% was indeed the  
2 target load factor used in the HLFT rate design.

3 **Q. Beginning on page 61, FIPUG witness Pollock discusses what he perceives**  
4 **are issues with the CILC rate design. Do you agree with his assessment?**

5 A. No. FIPUG witness Pollock asserts that rates should be set to unit costs without  
6 adjustment. Mr. Pollock fails to point out that the unit cost in the cost of service  
7 does not reflect non-firm CILC load, and therefore energy adjustments are  
8 required to achieve the target revenue increase shown in the cost of service  
9 MFR E-1.

10  
11 The CILC base target revenue increases, as outlined in MFR E-14 Attachment 2,  
12 pages 26-28, reflect the revenue deficiency shown in the cost of service MFR E-1.  
13 In determining the revenue deficiency, CILC revenues are adjusted to reflect the  
14 CILC Incentive Offset as detailed in MFR E-5, row 6. Without this adjustment,  
15 the revenue deficiency would be \$30.6 million higher. Additionally, both the  
16 demand and energy charges are developed as approved by the Commission in  
17 Docket No. 891045-EI.

18 **Q. Starting on page 63 of FIPUG witness Pollock's testimony, he discusses**  
19 **changes to the Commercial/Industrial Demand Reduction (CDR) Rider**  
20 **credit. Do you agree with his recommendations in this proceeding?**

21 A. No. FPL has not proposed to revise the \$4.68 credit under the CDR Rider in this  
22 filing because consideration and evaluation of changes to the credit, if needed, are  
23 made in the Demand Side Management (DSM) Goals docket.

**REBUTTAL OF FIPUG WITNESS BARON**

1

19  
20  
21  
22  
23

**Q. SFHHA’s witness Baron states on page 44 that the Commission should “continue its past practice of limiting the increase to any rate schedule to 1.5 times the average percentage increase.” Do you agree?**

A. No. For the same reasons I have previously discussed regarding FIPUG witness Pollock’s testimony, I also disagree with SFHHA witness Baron on this issue. Also, note that SFHHA’s witness Baron misstates the Commission’s revenue allocation guideline. As discussed previously, the Commission’s guideline applies to allocation of revenues among the rate *classes*, not rate schedules.

**Q. In Exhibit SJB-9 to SFHHA witness Baron’s testimony, an alternative revenue allocation for purposes of rate design is proposed for this proceeding. Do you agree with the methodology?**

A. No. SFHHA witness Baron’s proposed allocation is based on a flawed cost-of-service methodology as it applies to the FPL system, as addressed by FPL witness Ender. Additionally his approach would serve to benefit the customers that he represents by shifting revenues out of these rate classes and into others, specifically residential and small general service customers.

**Q. How would SFHHA witness Baron’s proposal affect parity among FPL’s rate classes?**

A. Under SFHHA’s witness Baron’s approach, fewer rate classes would reach parity levels and cross-subsidization would continue for the foreseeable future. Specifically, Mr. Baron’s approach would result in the residential and general

1 service rate classes overpaying by approximately \$190 million (See SFHHA  
2 witness Baron's Exhibit SJB-9, column 9 minus Exhibit SJB-10, column 4).

3  
4 **REBUTTAL OF SFHHA WITNESS KOLLEN**

5  
6 **Q. SFHHA Witness Kollen suggests on page 9 that the Commission's approval**  
7 **of the GBRA mechanism would represent a "radical departure from**  
8 **traditional ratemaking." Do you agree?**

9 A. No. The GBRA mechanism was used effectively to incorporate Turkey Point  
10 Unit 5 into rate base, thereby aligning these changes with fuel savings realized by  
11 customers while keeping regulatory costs low. This is similar to the mechanism  
12 established by the Alabama Public Service Commission (APSC) in 1982 for the  
13 purpose of recognizing the financial impact of placing new generating plants into  
14 service. Alabama Power Company has used that mechanism to effect an  
15 Adjustment for Commercial Operation of Certified New Plant (CNP) rate to  
16 incorporate into rates costs for new power plants that were certified by the  
17 Alabama Public Service Commission as they are placed into service (See APSC  
18 Dockets 18117 and 18416). While this process may not yet be considered  
19 traditional, it is far from "radical."

20 **Q. What do you mean by "aligning these changes with fuel savings"?**

21 A. I mean that base rate adjustments are made to reflect the costs of new plant  
22 investments through the GBRA mechanism at the same time that fuel clause  
23 factors are adjusted to reflect savings that will result from the new, more efficient

1 generating units. This alignment is consistent with ensuring that the appropriate  
2 price signal is sent to customers; without the alignment the price signal received  
3 would be too low as it would only reflect the fuel savings.

4 **Q. Have you quantified the benefits of these new, more efficient generating units**  
5 **included in GBRA?**

6 A. Yes. In addition to the first year fuel savings discussed in my direct testimony  
7 and Exhibit RBD-8, FPL has quantified the benefits of the efficiency  
8 improvements that have accrued and will continue to accrue over time, as  
9 discussed in FPL witness Hardy's direct and rebuttal testimony. FPL has  
10 projected that the investments included in base rates through GBRA, along with  
11 efficiency improvements of the existing fossil fleet, will help FPL achieve over  
12 \$3 billion in fuel savings from 2003 - 2009. These fuel savings have been passed  
13 on to the customer through the fuel clause. Going forward, FPL's rate request and  
14 continuation of the GBRA will allow continued investments in efficiency  
15 improvements, which are expected to yield savings of \$1 billion per year by 2014,  
16 thus allowing future bills to remain low.

17 **Q. What is the basis for the fuel savings claim?**

18 A. The \$3 billion in fuel savings was determined by an analysis that compared the  
19 continuation of FPL's generation fleet in 2003-2009 with and without the  
20 efficiency improvements at existing oil- and gas-fired facilities as well as the  
21 addition of new, more efficient generation facilities. As discussed by FPL witness  
22 Hardy, FPL's fossil fleet is expected to be almost 20% more efficient in 2014 than

1 it was in 2002 and, as a result, FPL estimates that the efficiency savings will grow  
2 to over \$1 billion per year in 2014.

3 **Q. What does that mean for customers?**

4 A. It means that customers pay less. FPL's current low bills reflect the savings in  
5 fuel costs realized due to investment in improving the efficiency of the FPL fossil  
6 fleet, as discussed by FPL witness Hardy. FPL's rates are the lowest in Florida  
7 and 21% below the Florida average according to June survey data on the typical  
8 1,000 kWh residential bill from the Florida Municipal Electric Association. As  
9 shown on RBD-10, the typical FPL customer currently pays \$28.50 less monthly,  
10 or about \$340 less per year than the Florida average.

11 **Q. SFHHA witness Kollen further suggests on pages 11-12 that there is no**  
12 **GBRA tariff to review and that paragraph 17 of the settlement lacks**  
13 **sufficient detail for approval of continuation of the GBRA mechanism. Do**  
14 **you agree?**

15 A. No. Paragraph 17 of the settlement and the clarifying language regarding the  
16 GBRA true-up contained on page 5 in Order No. PSC-05-0902-S-E1 approving  
17 the 2005 settlement provided sufficient detail for the Commission to approve,  
18 without issue, implementation of base rate increases for West County Units 1  
19 and 2, and Turkey Point Unit 5, including a base rate reduction to reflect a  
20 \$5.5 million savings in annual revenue requirements as a result of the Turkey  
21 Point Unit 5 project costing \$21 million less than originally projected.  
22 Additionally, I previously described the mechanics of the GBRA adjustment on  
23 pages 20-21 of my direct testimony. The mechanics of the GBRA adjustment and

1 true-up can be set forth in a tariff just as easily as it was set forth in my direct  
2 testimony.

3  
4 **REBUTTAL OF AFFIRM WITNESS KLEPPER**

5  
6 **Q. Should the Commission require FPL to develop multiple location rates as**  
7 **suggested by AFFIRM witness Klepper on page 12 of his testimony?**

8 **A.** No. The Commission should reject the request for two reasons. First, AFFIRM  
9 witness Klepper requests a form of conjunctive or aggregated billing that would  
10 violate Commission Rule 25-6.102, F.A.C., which prohibits conjunctive billing.  
11 This is a long-standing Commission rule and the Florida Legislature has seen fit  
12 to provide only a limited exception to this rule for customers who also generate  
13 electricity from agricultural waste (See §366.91(7), F.S.).

14  
15 Second, Mr. Klepper's request would also discriminate against similarly-situated  
16 customers that are not part of a chain. Florida law prohibits unjustly  
17 discriminatory or preferential pricing (See §366.07 F.S.). Mr. Klepper proposes  
18 that AFFIRM members be allowed to aggregate demands at individual locations  
19 based on ownership in order to qualify for the GSLDT3 rate, a rate designed for  
20 customers taking service at the transmission voltage level, and avoid all  
21 distribution charges. However, he has not shown that an AFFIRM customer that  
22 is part of a chain costs any less to serve or uses the distribution system differently  
23 than the exact same type of customer that is not part of a chain.

1 Finally, as discussed in my direct testimony, FPL offers many rate alternatives  
2 that provide customers opportunities to lower their costs through efficient energy  
3 usage. The high load factor time-of-use (HLFT) and seasonal demand time-of-  
4 use (SDTR) rates were designed specifically for this purpose. For the foregoing  
5 reasons the Commission should not require multi-location rates as requested by  
6 AFFIRM witness Klepper.

7 **Q. Does this conclude your rebuttal testimony?**

8 **A. Yes.**

1 BY MS. CLARK:

2 Q Are you also sponsoring exhibits to your  
3 rebuttal testimony?

4 A Yes, I am.

5 Q Do those exhibits consist of RBD-9 through  
6 RBD-10?

7 A Yes.

8 CHAIRMAN CARTER: I'm showing, Ms. Clark, 379  
9 and 380 for those.

10 MS. CLARK: I do have that right, thank you.

11 (Exhibit Nos. 379 and 380 marked for  
12 identification.)

13 BY MS. CLARK:

14 Q And are those exhibits true and correct to the  
15 best of your knowledge?

16 A Yes, they are.

17 Q Ms. Deaton, have you prepared a summary of  
18 your direct and rebuttal testimony?

19 A Yes, I have.

20 Q And would you give it to us --

21 CHAIRMAN CARTER: Ms. Deaton, were you here  
22 when I explained the lights?

23 THE WITNESS: I think I saw them, but you can  
24 explain again.

25 CHAIRMAN CARTER: Green is good; amber, you've

1 got two minutes; and red, you've got 30 seconds.

2 THE WITNESS: Okay.

3 Good morning, Chairman Carter and  
4 Commissioners. My direct and rebuttal testimony  
5 addresses the rate design issues, including the proposed  
6 rate levels, allocation of the rate increases to the  
7 rate classes, and the GBRA mechanism, as well as the  
8 forecast of base revenues.

9 Since 1985, FPL has had three rate decreases  
10 resulting in more than \$6 billion in customer savings.  
11 As a result, FPL's current rates compare favorably in  
12 Florida and nationally. In fact, the base component of  
13 the bill is 17 percent lower than it was 24 years ago,  
14 while the Consumer Price Index has increased nearly  
15 100 percent. The result is that bills are currently the  
16 lowest in Florida, as you can see here in my Exhibit  
17 RBD-10, and saves customers more than \$340 per year.

18 Additionally, FPL's commercial and industrial  
19 bills are also among the lowest in Florida, and rates  
20 are expected to remain low, going forward. As shown on  
21 my Exhibit RBD-2, the typical residential bill is  
22 expected to go from \$109 in December to about \$100 in  
23 January 2010, the lowest in four years. The bill in  
24 January '11 is expected to be approximately \$114, or  
25 about \$5 higher than it will be in December of this

1 year. Most commercial and industrial bills will also  
2 see an overall bill decrease, as shown in my Schedule  
3 MFR A-2.

4 Therefore, contrary to the assertions of FIPUG  
5 and South Florida Hospital, there is no need to apply a  
6 limit to the increases that are properly allocated to  
7 the various rate classes. While in certain cases the  
8 Commission has elected to limit rate increases as a  
9 means of mitigating significant bill impacts, the  
10 circumstances in this case do not justify the use of  
11 such a limitation. With bills going down for most  
12 customers in 2010 and only moderate increases in 2011,  
13 limiting increases in this case would do nothing more  
14 than allow the inappropriate shift of millions of  
15 dollars in costs to the residential and the small  
16 general service customers. In fact, general service  
17 customers, which are at 150 percent of parity currently,  
18 would see only a six percent base increase in 2010 under  
19 FPL's proposal. However, under Intervenors' position to  
20 limit increases to the large commercial/industrial  
21 classes to 1.5 times the system average, increases for  
22 the general service customers would be as high as 19  
23 percent.

24 Furthermore, FPL provides many rate offerings,  
25 such as the high load factor time-of-use rate, that

1 allow customers the opportunity to reduce their energy  
2 bills even further, contrary to the claims made by  
3 AFFIRM.

4 It appears that AFFIRM has not examined the  
5 high load factor time-of-use rate as an option to the  
6 general service demand rate, yet many customers with 24-  
7 hour operations similar to AFFIRM customers enjoy  
8 savings under the high load factor time-of-use rate.

9 As with all our customers, FPL will gladly  
10 work with AFFIRM to examine the potential benefits  
11 available under the high load factor time-of-use rate  
12 and other opportunities that may provide benefits to  
13 AFFIRM customers as well as the rest of FPL customers.

14 FIPUG's proposal to increase the commercial/  
15 industrial load control and the commercial demand  
16 reduction rider discounts beyond the cost-effective  
17 levels set by this Commission in the DSM goals docket is  
18 inappropriate. FIPUG would have the CILC credits  
19 increased more than \$20 million above the cost-effective  
20 levels set by this Commission. The CILC rate was closed  
21 by the Commission due to concerns that it was no longer  
22 cost-effective. Increases to the credit proposed by  
23 FIPUG would make CILC even less cost-effective. Any  
24 changes to the CILC or CVR credits are properly  
25 addressed in the DSM goals proceeding to ensure

1 continued cost-effectiveness.

2 Turning to the GBRA, despite the fact that the  
3 GBRA in Florida has been in place and worked smoothly  
4 for three FPL power plants over the last four years,  
5 South Florida Hospital calls it complicated and alleges  
6 that it's a radical departure from traditional  
7 ratemaking. In fact, the opposite is true. The GBRA is  
8 an efficient, progressive rate mechanism that allows the  
9 recovery of cost of new, large power plants coincident  
10 with the resulting reduction in the fuel cost, thereby  
11 sending the appropriate price signals.

12 As shown here on RBD-8, the fuel efficiency  
13 savings from Turkey Point 5 and the three West County  
14 units are projected to offset the majority of the  
15 first-year revenue requirements going into base rates.  
16 Like the Florida Commission, the Alabama Public Service  
17 Commission has been using a similar mechanism since  
18 1982. Clearly, the GBRA is neither a radical or  
19 complicated concept.

20 Going forward, the GBRA plants, combined with  
21 other fossil fleet efficiency improvements since 2002 as  
22 discussed by FPL Witness Hardy, are projected to result  
23 in an estimated \$3 billion in fuel savings this year,  
24 growing to an estimated billion dollars per year by  
25 2014.

1           In closing, it's important to note that the  
2 suggested rate design changes advocated by the  
3 intervenors serve to benefit select customers, while the  
4 rates developed by FPL benefit all FPL customers through  
5 fair and equitable rate design.

6           Thank you.

7           CHAIRMAN CARTER: Thank you very kindly.

8           MS. CLARK: Mr. Chairman, we tender Ms. Deaton  
9 for cross-examination.

10          CHAIRMAN CARTER: Who is first?

11          MS. CHRISTENSEN: No questions.

12          CHAIRMAN CARTER: Mr. Wiseman, you're first?  
13 You are recognized.

14          MR. WISEMAN: Thank you.

15                           CROSS EXAMINATION

16          BY MR. WISEMAN:

17           Q     Good morning, Ms. Deaton. I'm Ken Wiseman for  
18 the South Florida Hospital and Healthcare Association.

19                    To start off, I'm really hoping you can clear  
20 up some confusion that I think is in the record.

21                    Now, would you agree that as originally  
22 proposed, FPL was proposing to increase base rates  
23 effective January 1, 2010, by approximately  
24 \$1.044 billion?

25           A     I'm not -- 1.044 less the adjustments shown in

1 KO-16.

2 Q I'm sorry --

3 A That was adjusted down in Exhibit KO-16. I  
4 don't have the total numbers with the adjustments.

5 Q Well, here's what I'm trying to figure out. I  
6 believe that Mr. Olivera testified that FPL is now  
7 seeking additional base revenues of \$983 million. Can  
8 you confirm that that is the correct number?

9 A I don't have that exhibit.

10 Q So you don't know?

11 MS. CLARK: Mr. Chairman, Ms. Deaton is the  
12 rate design person. The revenue requirement would have  
13 been more appropriate to ask of Ms. Ousdahl.

14 CHAIRMAN CARTER: Commissioner Skop?

15 COMMISSIONER SKOP: Mr. Chair, I'm looking at  
16 direct testimony and I have questions with respect to  
17 the revenue requirement. I see it listed in multiple  
18 places discussing GBRA and the revenue requirements, so  
19 certainly that is going to be my line of questioning.

20 CHAIRMAN CARTER: Mr. Wiseman, to the  
21 objection?

22 MR. WISEMAN: I think this is a key question.  
23 This is the rates witness. The rates are designed to  
24 collect revenues. You can't have one without the other.  
25 And I think it's critical that we understand what the

1 rates that are being proposed are designed to recover.

2 CHAIRMAN CARTER: Okay. Ms. Helton?

3 MS. HELTON: It seems to me that it's a fair  
4 question, what revenue requirements are the rates that  
5 she has proposed -- what revenue requirements has she  
6 used to form the basis for her rate proposal.

7 CHAIRMAN CARTER: Overruled. You may proceed.

8 BY MR. WISEMAN:

9 Q Ms. Deaton, my question, again, was that Mr.  
10 Olivera -- my recollection, anyway, is that he testified  
11 that FPL is now seeking to increase base revenues by  
12 \$983 million, and I would like to know if you can  
13 confirm that that is the number that we should be  
14 looking at?

15 MS. CLARK: I would ask Mr. Wiseman to  
16 clarify. There's been a request for 2010 and a  
17 subsequent year. I think he should be clear on what  
18 he's asking.

19 BY MR. WISEMAN:

20 Q Effective January 1, 2010.

21 A I have designed my revenues -- well, my rates  
22 -- to recover \$969 million in revenues. That will be  
23 adjusted lower for the adjustments in KO-16. We have  
24 not modified all of the MFRs to reflect those  
25 adjustments.

1 Q Do you have a ballpark idea of how much the  
2 adjustment is going to be? Is it going to be  
3 one percent, two percent, do you know?

4 A I don't know.

5 Q All right. If we could pass out -- I want to  
6 ask you questions about two MFRs. One I have made  
7 copies of for everyone's convenience, and I apologize,  
8 Ms. Deaton, if you could pull the other one, it's  
9 Schedule E-5 for the 2010 test year?

10 A I have that.

11 Q Okay.

12 A Mr. Wiseman, I could provide the further  
13 clarification on adjustments for KO-16. I do believe I  
14 provided that in a late-filed deposition exhibit.

15 MR. WISEMAN: Could I ask if counsel for FPL  
16 has a copy of that exhibit?

17 MS. CLARK: I can try and get one.

18 MR. WISEMAN: I wonder if at a break we could  
19 get a look at that exhibit. I don't need it right now  
20 to continue, but I think it would be helpful for the  
21 record.

22 CHAIRMAN CARTER: Okay, you may proceed.

23 THE WITNESS: And we have here in my Exhibit  
24 RBD-2 has been adjusted for KO-16.

25 / / / / /

1 BY MR. WISEMAN:

2 Q I'm sorry, what was the exhibit number you  
3 referred to?

4 A RBD-2, the modified exhibit. It was updated  
5 on August 20th for the new fuel and capacity factors,  
6 and it also reflected the adjustments for KO-16.

7 Q Maybe if we could get that at a break as well,  
8 but let's go forward.

9 You have MFR E-5 for the 2000 test year before  
10 you, correct?

11 A Yes.

12 Q All right. And I've also provided you a  
13 handout that has Schedule E-13A for the 2010 test year,  
14 correct?

15 A Yes.

16 Q All right. Now, looking at E-5 where it  
17 says -- in column 2 where it says Total Retail, down in  
18 line 30, there is a number of approximately  
19 \$969 million. Do you see that?

20 A Yes, that is correct.

21 Q And that is the \$969 million that you just  
22 referred to as the number that your proposed rates are  
23 designed to collect, correct?

24 A Yes.

25 Q All right. Now, if we look up at -- we're

1 still in column 2. If we look up at the top to row --  
2 I'm sorry, line 5, am I correct that the retail  
3 revenues, base revenues, under current rates would be  
4 designed to recover a total of \$3,880,727,000, is that  
5 correct?

6 A Yes, these are the revenues produced by  
7 current rates as adjusted for West County 1 and 2 that  
8 will be in effect in January 1st on 2010.

9 Q All right. And the billing determinants that  
10 you used to determine this figure of approximately  
11 \$3.8 billion, those, am I correct, are the 2010 billing  
12 determinants?

13 A That is correct.

14 Q Okay. Now, if you could take a look at  
15 Schedule E13A, please? You would agree that column 2  
16 shows the retail revenues that would be recovered under  
17 current rates using 2010 billing determinants and would  
18 recover the \$3.8 billion that we were just referring to,  
19 correct?

20 A Yes.

21 Q Then if you look over at column 3, am I  
22 correct that, first of all, to -- you used the 2010  
23 billing determinants to determine the revenues in this  
24 column as well, correct?

25 A Yes.

1 Q Okay. And using the proposed rates that were  
2 designed to collect the \$969 million that we previously  
3 referred to, that your proposed rates would collect in  
4 total approximately \$4.8 billion, is that right?

5 A Yes.

6 Q Okay. Now, just so I understand your prior  
7 testimony of just a few minutes ago, due to the  
8 adjustments that have been made since the case has been  
9 filed, the total amount that you will be seeking to  
10 collect in base revenues will be something slightly less  
11 than this \$4,849,000,000 in column 3, correct?

12 A That is correct.

13 Q But you have not calculated the exact rates  
14 that would produce the number that you will be looking  
15 for?

16 A No. We have made an estimate of the impact on  
17 the residential bill. That's as far as we've been able  
18 to do.

19 Q Would you agree, we're not talking about a  
20 five percent reduction, correct?

21 A The reduction is the difference in -- it's a  
22 67-cent reduction.

23 Q I'm sorry --

24 A It's a 67-cent reduction in the thousand  
25 kilowatt hour bill between what we had expected the bill

1 to be for residential customers, the \$51.71 on my  
2 original RBD-2, versus the \$51.10.

3 Q There's no way I can do the math in my head,  
4 but I assume that is less than a one percent reduction,  
5 is that correct?

6 A I don't have a calculator, but yes, I think  
7 that's --

8 Q Okay. So if we go to -- back to Schedule  
9 13-A, and I guess we'll have to use this for  
10 illustrative purposes, but you would agree that the  
11 numbers that are here in this schedule would be off by  
12 less than one percent, correct?

13 A I believe the number for -- it's coming back  
14 to me now -- the number for 2010 is about a \$60 million  
15 reduction and 2011 is about a \$68 million reduction.

16 Q And again, as compared to total revenues of  
17 close to \$5 billion, that would be less than one  
18 percent, correct?

19 A Yes.

20 Q All right. Now, would I be correct, then, in  
21 looking at 13-A to say that, as an example, for the CILC  
22 1-D rate schedule, that FPL is proposing an increase to  
23 base rates of 58.8 percent?

24 A Which one?

25 Q I picked the one on line 1, the first one --

1           A     Okay.  Yes, 58.8 percent, that is the proposed  
2 increase in base rates.  However, if you look on MFR  
3 A-2, you will see pretty large decreases in the overall  
4 bill for CILC customers.

5           Q     If we can concentrate on base rates, please,  
6 that's what I want to talk about.

7           A     Well, the bill is what the customer will see.

8           Q     I understand, and actually I'm going to ask  
9 you some questions about the overall bill as well, but  
10 for right now I think if we keep with base rates it will  
11 move this along a lot faster.

12                     You would agree, looking down this page, that  
13 for CILC 1-T, FPL is proposing to increase base rates by  
14 63.2 percent, is that correct?

15           A     Yes.  Again, in the 1-T, customers have large  
16 energy uses and they will see among the largest bill  
17 decreases due to the fuel decreases.

18           Q     And if we go down, as an example, to GSLD-1,  
19 you're proposing to increase base rates for that rate  
20 schedule by 50.7 percent, correct?

21           A     That's correct.

22           Q     And for HLFT-2 you're proposing to increase  
23 base rates by 58.1 percent, correct?

24           A     That's correct.

25           Q     Now, just to go down this page a little bit

1 further, it's line -- I believe it's line 25, for the  
2 residential class, FPL is proposing to increase base  
3 rates by 20.8 percent, is --

4 A Yes. The residential class is over parity, so  
5 they would see a lower than average increase in their  
6 base rates.

7 Q I have a question for you about that. Do you  
8 think that a 21 percent increase in base rates in one  
9 year constitutes a large single swing in rates?

10 A No, not when you consider the bill the  
11 customer will see, which will be the lowest in four  
12 years.

13 Q What about -- again, let's put fuel costs  
14 aside, I said we will get to that, I'm talking solely  
15 about base rates. Do you believe a 21 percent swing in  
16 one year with respect to the base rate constitutes a  
17 large single-year swing?

18 A You cannot look at the base rates and fuel  
19 separately. We're investing in fuel efficiency  
20 improvements, as Witness Hardy will testify, and those  
21 are resulting in lower fuel costs and you have to look  
22 at the total bill.

23 MR. WISEMAN: Mr. Chair, the witness has given  
24 two explanations, and I know she's entitled to give an  
25 explanation, but I think I'm entitled to a yes or no as

1 well, and if I could have the witness answer the  
2 question yes or no?

3 THE WITNESS: I have answered no, and I have  
4 explained why.

5 BY MR. WISEMAN:

6 Q Your answer is no?

7 A Yes, my answer is no, because the total bill  
8 is decreasing.

9 Q All right. As you mentioned in your oral  
10 statement, both SFHHA's Witness Baron and FIPUG's  
11 Witness Pollock recommended that any increases in any  
12 rate schedule should be limited to one and a half times  
13 the average percentage increase, if any, that the  
14 Commission grants in this case, is that correct?

15 A I'm sorry, could you repeat the question?

16 Q Sure. Both Witnesses Pollock and Baron  
17 recommended that the increases to any rate schedule be  
18 limited to 1.5 times the average increase, is that  
19 correct?

20 A I believe that Pollock clarified that it  
21 should be limited to the rate class, not rate schedule.  
22 I believe Baron said rate schedule, from which the  
23 Commission uses rate class.

24 Q Fair enough.

25 You're familiar with the TECO, the recent

1 Tampa Electric decision?

2 A Yes, I am.

3 Q And you would agree that in that case the  
4 Commission did apply the 1.5 times limit, is that right?

5 A I agree that they apply that to one rate class  
6 that was out of line with parity, but there were no  
7 other rate classes that needed to be brought in line  
8 with parity.

9 Q All right. Now, if I understood your rebuttal  
10 testimony and your oral statement this morning, as well  
11 as some answers that you've given, I believe it's your  
12 position that the Commission doesn't need to apply the  
13 1.5 limit in this case because, in your view, overall  
14 bills are going to go down in 2010 and just rise  
15 moderately in 2011, is that correct?

16 A That's correct, and that is not just my view,  
17 that is the view of prior Commission orders, also.

18 Q You would agree that the major reason that  
19 you're suggesting that overall bills will go down is  
20 because of fuel costs, correct?

21 A And fuel efficiency improvements.

22 Q Would you agree that 70 to 80 percent of FPL's  
23 fuel costs reflect natural gas prices?

24 A That's the approximate range.

25 Q Were you here when Mr. Olivera testified last

1 week?

2 A No.

3 Q Well, he testified that natural gas prices are  
4 volatile. I wonder, do you agree with that?

5 A I agree with it, they're volatile.

6 Q So that means that natural gas prices can just  
7 as easily go up as they can go down, isn't that true?

8 A That's true, and that is why the fuel  
9 efficiency improvements are so important. The customers  
10 will save even more due to fuel efficiency improvements  
11 when prices do go up, or if they go up.

12 Q And you would agree, however, that if your  
13 fuel projections prove to be wrong because fuel prices  
14 rise, that customers will not see overall decreases in  
15 their bills, isn't that true?

16 A We have filed the fuel factors for 2010, and  
17 if they are approved by this Commission, they will see  
18 those lower fuel factors in their bills.

19 Q Right, and if fuel prices end up going up,  
20 then there's going to be -- FPL is going to collect  
21 those higher fuel costs later on, isn't it?

22 A If fuel prices go up, those will be reflected  
23 in fuel factors in the future, that's true, and if  
24 prices go down, the fuel factors will also come down  
25 again.

1           Q     Well, I wonder, do you think that the -- in  
2 determining whether to approve FPL's proposed base rate  
3 increase, the Commission should take the volatility of  
4 fuel prices into account?

5           A     No.

6           Q     Do you believe that in determining whether to  
7 limit increases to rate schedules to one and a half  
8 times the average percentage increase, the Commission  
9 should take the volatility of fuel prices into account?

10          A     They have not in the past.

11          Q     And what is your testimony in this case,  
12 should they --

13          A     In this case, the forecast is prices are going  
14 down and that they will rise moderately in 2011 and that  
15 the Commission based its decision based on the facts  
16 before it, and the fact is that these larger CI rate  
17 classes are below parity and need to be brought up to  
18 parity in order to carry their fair share of the cost.  
19 They are enjoying the benefits, they enjoy the largest  
20 benefits of the fuel savings. Because they are heavier  
21 energy users, they're going to see the larger benefits  
22 in the fuel savings. They should pay their fair share  
23 of the production costs that produce those benefits.

24          Q     All right. My question, again, was in  
25 determining whether to limit increases to rate schedules

1 to one and a half times the average, should the  
2 Commission take the volatility of fuel prices into  
3 account?

4 A I don't think so.

5 Q Okay. Can you refer to page 8 of your direct  
6 testimony, please? I'm not going to ask you a question  
7 about a specific line there, but you would agree, you  
8 talked generally about billing determinants at that  
9 portion of your testimony, correct?

10 A Yes.

11 Q Now, you weren't here when Dr. Morley  
12 testified last week either, right?

13 A No.

14 Q Well, Dr. Morley testified that to the extent  
15 that she forecast growth in kilowatt hour sales by, as  
16 an example, two percent, all other things being equal,  
17 that would translate to lower billing determinants than  
18 if she had forecast growth in kilowatt hour sales at,  
19 say, ten percent.

20 MS. CLARK: Mr. Chairman, I would like for  
21 Mr. Wiseman to have that testimony for Ms. Deaton to  
22 look at.

23 MR. WISEMAN: I can ask the question, I don't  
24 have to refer to Dr. Morley.

25 / / / / /

1 BY MR. WISEMAN:

2 Q I'll just ask you -- let me rephrase the  
3 question -- would you agree that to the extent that a  
4 forecast of growth in kilowatt hour sales is two  
5 percent, all other things being equal, that would  
6 translate to lower billing determinants than if the  
7 forecast of growth in kilowatt hour sales were ten  
8 percent?

9 A Certainly.

10 Q Okay. Now, I want to ask you a hypothetical.  
11 Assume a utility has a cost of service of \$100, and that  
12 is inclusive of its authorized return on equity. Assume  
13 that it forecasts consumption -- annual consumption of  
14 100 kilowatt hours and there's only one rate class and  
15 all costs are allocated on the basis of energy. Under  
16 that hypothetical -- and let's say that billing  
17 determinants are set at 100 -- would you agree that the  
18 unit rate of electricity then would be one dollar per  
19 kilowatt hour?

20 A Yes.

21 Q Okay. Assume we're in year one since base  
22 rates have been set. The utility sells exactly 100  
23 kilowatt hours during the year at a dollar each. Would  
24 you agree that in that hypothetical, the utility has  
25 recovered its entire cost of service inclusive of its

1 authorized return on equity and no more?

2 A You're saying we collected \$100?

3 Q Yes.

4 A Yes, then we have collected the revenue  
5 requirements we set rates on.

6 MR. WISEMAN: If I could have an exhibit  
7 marked for identification, please?

8 CHAIRMAN CARTER: Commissioners, No. 484.  
9 Short title?

10 MR. WISEMAN: Impact of Customer Growth/  
11 Billing Determinants.

12 CHAIRMAN CARTER: We will take the title off  
13 the sheet when we see it.

14 (Exhibit No. 484 marked for identification.)

15 MS. CLARK: Mr. Chairman, could I ask Mr.  
16 Wiseman where this comes from?

17 MR. WISEMAN: This is a hypothetical, it's a  
18 continuation of the hypothetical that I've been talking  
19 about. It's simply to make it easier to follow along.

20 CHAIRMAN CARTER: Okay, you may proceed.

21 BY MR. WISEMAN:

22 Q Ms. Deaton, assume -- we're still talking  
23 about the same hypothetical, all the assumptions that I  
24 have given you are the same, okay, except that we're now  
25 in year two. The cost of service is exactly the same,

1 but in year two, the utility sells 110 kilowatt hours.  
2 Would you agree that that would mean in year two that  
3 the utility has recovered \$110, which would be its \$100  
4 of cost of service, which is inclusive of its authorized  
5 return on equity, plus \$10 extra?

6 A You're saying in year two that the revenue  
7 requirements would be the same as year one?

8 Q Yes.

9 A That we could serve -- that we have sold 110  
10 -- we've sold ten more units at no extra cost?

11 Q That's --

12 A I don't accept those assumptions. If you sell  
13 more, it's going to cost more. I can't say what the  
14 excess would be.

15 Q Assume again that these are base revenues. We  
16 are not taking into account energy. Energy is -- fuel  
17 costs are separate and apart, this has nothing to do  
18 with this hypothetical.

19 The hypothetical is, assume that the cost of  
20 service for base rates is exactly -- it's still \$100.  
21 So under that hypothetical, would you agree that if the  
22 utility sells 110 kilowatt hours, which is ten kilowatt  
23 hours more than rates were designed on, it would make an  
24 additional \$10 above the \$100 cost, authorized cost of  
25 service, right?

1           A     Under the assumption that revenue requirements  
2 have not gone up in year two, that would be correct. I  
3 don't see how that would happen, but --

4           Q     Okay, fair enough. Again, we're just using  
5 this for illustrative purposes to talk about how billing  
6 determinants can affect recoveries of authorized return  
7 on equity, just as a hypothetical and --

8           A     But there is no assumption here about the  
9 range of the return on equity that would be allowed.

10           MS. CLARK: Mr. Chairman, I think I want to  
11 object to the line of this question and the exhibits. A  
12 hypothetical needs to have some basis in the real world,  
13 and I think what Ms. Deaton has indicated is this would  
14 not be a hypothetical that has a basis in the real  
15 world, because you would have costs for serving changing  
16 it. So to that extent, I don't think it's an  
17 appropriate line of questions.

18           MS. KAUFMAN: Mr. Chairman, may I be heard  
19 after Mr. Wiseman?

20           CHAIRMAN CARTER: No.

21           Mr. Wiseman, to the objection?

22           MR. WISEMAN: I don't want to testify, but  
23 utilities all the time serve more load in one year than  
24 they do in another year. And that doesn't mean that  
25 their cost of service changed one iota.

1 MS. CLARK: I would object, because I  
2 believe --

3 MR. WISEMAN: Ms. Clark, if I could finish my  
4 statement, please?

5 CHAIRMAN CARTER: No lunch today.

6 MR. WISEMAN: Again, this is a hypothetical  
7 simply to illustrate how billing determinants work.  
8 It's not being put in the record to say that it would  
9 work in exactly this way in the real world. It has been  
10 put in as a simple explanation of how billing  
11 determinants reflect -- or, I'm sorry, impact a  
12 utility's recovery of costs. That's all it is.

13 CHAIRMAN CARTER: Ms. Helton?

14 MS. HELTON: Mr. Devlin has whispered in my  
15 ear that he thinks that this hypothetical could happen  
16 in the real world, so I accept what he says. I'm also  
17 struggling, too, and I'm sorry, I can't remember who the  
18 witness was, but I remember that Florida Power & Light  
19 had an exhibit that they used for demonstrative purposes  
20 that listed the depreciation lives for a plant. So I'm  
21 really struggling with how that's different than what  
22 Mr. Wiseman is doing here.

23 He has made it very clear that this is just a  
24 hypothetical. I'm a visual person. I appreciate having  
25 these where I can see it instead of having to listen to

1 it, too. So in my mind, Mr. Chairman, this is an  
2 appropriate way to ask the questions of the witness.

3 CHAIRMAN CARTER: Overruled. You may proceed.

4 BY MR. WISEMAN:

5 Q I think we were still on year two.

6 A Okay.

7 Q Would you agree that under the hypothetical,  
8 the utility in this instance would have collected a  
9 total of \$110, which would mean it collected its \$100  
10 cost of service, which was inclusive of its authorized  
11 return on equity, plus \$10 on top of that?

12 A Authorized the midpoint?

13 Q Fine, on top of the -- midpoint of the  
14 authorized return on equity.

15 A Under that assumption, which I have never seen  
16 revenue requirements be exactly the same from one year  
17 to the next, but under that assumption, yes, they would  
18 collect \$10.

19 Q All right. \$10 extra, right?

20 A More than the midpoint of the return on  
21 equity.

22 Q Now, let's assume we're now in year three, and  
23 exactly the same assumptions for the hypothetical. This  
24 year, the utility sells 125 kilowatt hours, so in year  
25 three, the utility would now collect its \$100 cost of

1 service inclusive of the authorized return on equity at  
2 the midpoint, plus \$25 on top of that, right?

3 A Yes, there would be another \$25.

4 Q Okay. Now, if you can turn to page 2 of the  
5 exhibit?

6 And before that, would you agree with the  
7 proposition that to the extent the utility makes more  
8 sales than were used to set billing determinants when  
9 rates were set, all other things being equal, the  
10 utility will earn more than its authorized return on  
11 equity?

12 A No.

13 Q All right. Well, let's turn to page 2.  
14 Assume we're back in year one. Everything is the same,  
15 except the utility now has two customers -- two classes  
16 of customers, okay? And they take service under  
17 different rate schedules. Class A customers are  
18 forecasted to take 100 kilowatt hours and they pay 37  
19 and a half cents per kilowatt hour for service, okay?  
20 Do you have that?

21 A I see that on the blue bar. That's 37.5 cents  
22 or dollars?

23 Q Cents -- well, that is actually dollars on the  
24 table, but the rate is 37 and a half cents, okay?

25 A Okay.

1           Q     All right. Say that Class B also is  
2 forecasted to take 100 kilowatt hours, and it pays a  
3 rate of 62 and a half cents per kilowatt hour, okay?

4           A     Uh-huh.

5           Q     So the rates are designed such that if the  
6 utility sells 100 kilowatt hours to Class A and 100  
7 kilowatt hours to Class B, it's going to recover its  
8 \$100 cost of service, which is inclusive of its  
9 authorized return on equity, right?

10          A     At the midpoint.

11          Q     Right. Okay. Now, assume we're in year one  
12 and the utility sells in fact 100 kilowatt hours to  
13 Class A and 100 kilowatt hours to Class B. It would  
14 recover its authorized -- it would recover its cost for  
15 service plus its authorized return on equity, right?

16          A     The midpoint.

17          Q     Okay. We are now in year two, and one thing  
18 -- two things have changed now in year two. In year  
19 two, Class A only consumes 90 kilowatt hours instead of  
20 the 100 that rates were designed on, okay? Do you have  
21 that?

22          A     Uh-huh.

23          Q     But Class B consumes 110 kilowatt hours, so  
24 that is ten kilowatt hours more than rates were designed  
25 on, correct?

1           A     That's -- excuse me?

2           Q     Is that a yes?

3           A     Ninety -- you're saying that the blue bar uses  
4     90 and the red bar uses 110?

5           Q     Correct. Do you have that?

6           A     Yes.

7           Q     Okay. Would you accept, subject to check,  
8     that in this hypothetical Class A would have contributed  
9     \$33.75 to the utility's cost of service and Class B  
10    would have contributed \$68.75 to the cost of service and  
11    the utility would have collected a total of \$102.50,  
12    okay?

13          A     Subject to check, I'm not doing the math.

14          Q     That's fine. You would agree that in this  
15    scenario, Class B would be overcontributing to the  
16    utility's return on equity and Class A would be  
17    undercontributing, correct?

18          A     I would not agree. If they're using more,  
19    then they would be allocated more cost of service.

20          Q     They have not filed a new rate case. We are  
21    talking about the rates that were set, and we're  
22    comparing to the rate design in the -- that was used for  
23    setting rates. Compared to the rate design that was  
24    used for setting rates, isn't it true that Class B has  
25    now overcontributed to the cost of service and return on

1 equity and Class A has undercontributed?

2 A No, they have contributed their share. If  
3 they're using more, they would get more.

4 Q We're putting -- more as compared to the way  
5 in which rates were designed. Haven't they contributed  
6 more than the basis upon which rates were designed?

7 A If they increase their usage, they will pick  
8 up a larger share of the cost of service. That's the  
9 way it works.

10 Q So it's your testimony, then, that there is no  
11 relationship between the rates -- the manner in which  
12 rate are designed and the contribution that rate classes  
13 make to the utility's recovery of cost of service?

14 A I don't understand your question.

15 Q I'll repeat it. Is it your testimony that  
16 there is no relationship between the manner in which  
17 rates are designed and a utility's recovery of its cost  
18 of service?

19 A Of course not. The rates are designed based  
20 on the cost of service.

21 Q Right. So let's go back to the hypothetical  
22 and let's ask the question again. I think this really  
23 should be very easy.

24 A I think I have answered the question.

25 MS. CLARK: Madam Chairman, I was going to

1 suggest it has been asked and answered at least three  
2 times.

3 COMMISSIONER EDGAR: Mr. Wiseman?

4 MR. WISEMAN: She just told me that there is a  
5 relationship between the manner in which rates are  
6 designed and the contribution to class of service, and  
7 her prior answer did not reflect that answer. So I  
8 think I'm -- there is an inconsistency in her testimony,  
9 and I think I'm entitled to go back and figure out what  
10 she believes the right answer is. We have two answers  
11 right now.

12 COMMISSIONER EDGAR: Ms. Clark?

13 MS. CLARK: I don't believe there is an  
14 inconsistency.

15 COMMISSIONER EDGAR: If that's an objection,  
16 it's overruled. Let's do try to move along.

17 BY MR. WISEMAN:

18 Q We won't even go to the third year in this  
19 one, let's just keep it at the second, because I think  
20 it makes the point.

21 Again, we're talking about a comparison as  
22 between the manner in which rates are designed and what  
23 has happened in actuality on this particular  
24 hypothetical utility system. Rates were designed such  
25 that Class B was going to contribute \$62.50 to the

1 utility's cost of service. Rates were designed such  
2 that Class A was going to contribute 37 and a half cents  
3 to the utility's cost of service.

4 A No, sir. These rates were designed such that  
5 Class A would contribute 37.5 cents per kilowatt hour  
6 use to the cost of service, and Class B was designed  
7 such that it would contribute 62.5 cents per kilowatt  
8 hour to the cost of service. You use more, you will pay  
9 more.

10 Q Okay. When you set -- go back to your  
11 Schedule E-13A, if you would. Let's just start -- use  
12 line 1. That's for the CILC-1D rate class, that's as  
13 good as any. You told me that of the revenue -- well,  
14 you told me that you used the 2010 billing determinants  
15 to determine the proposed base revenues that are in  
16 column 3, correct?

17 A Yes.

18 Q So there is a particular rate that would  
19 produce the revenues that are in column 3 for the  
20 CILC-1D rate class, correct?

21 A Yes, and that rate is consistent of --  
22 consists of customer charges, demand charges, energy  
23 charges, which are all separate parts of the cost of  
24 service.

25 Q There are rates -- there is a rate that would

1 produce the revenues -- and maybe it's multiple rates,  
2 but there are multiple rates that would produce the  
3 revenues that are in column 3 for the CILC-1D rate  
4 class, correct?

5 A The CILC-1D rate class is a rate class unto  
6 itself, so there's only one rate schedule in that rate  
7 class, and that rate schedule and the rates that are in  
8 that schedule would produce these revenues.

9 Q Right. You took the rate times the billing  
10 determinants assigned to that rate class, and you  
11 multiplied it out, and that produces \$82,079,000,  
12 correct?

13 A It's not one rate, but yes.

14 Q And you used -- for every rate schedule that  
15 is on here, whether it's one rate, whether it's multiple  
16 rates, you took the rates that you've proposed, you  
17 multiplied them times the billing determinants and you  
18 determined the proposed base revenues that are assigned  
19 to that rate schedule, correct?

20 A That's correct.

21 Q Okay. And I'm asking you the same question as  
22 respect to this hypothetical. There is only one rate on  
23 this utility system that we have been talking about.  
24 The rates were designed -- I'll go back to year one.  
25 The rates were designed with a -- that there would be a

1 -- the rate was 37 and a half cents per kilowatt for  
2 Class A, and with the expectation that -- and the  
3 billing determinants that were assigned to that class  
4 were 100. Rate Class B was assigned billing  
5 determinants of a hundred also at a rate of 62 and a  
6 half cents.

7 A Right, per kilowatt hour.

8 Q Per kilowatt hour. So going back to year one,  
9 the utility -- rates were designed such that there was  
10 an expectation that rate class one would contribute a  
11 total of 37 and a half dollars to the cost of service  
12 plus inclusive of the return on equity, and Class B  
13 would contribute a total of 62 and a half dollars --

14 A Based on the assumptions of what the usage  
15 was.

16 Q And based on the billing determinants?

17 A Right.

18 Q Okay, so we're in year two. There hasn't been  
19 another rate case. Billing determinants are exactly the  
20 same. The rate for Class A is still 37 and a half  
21 cents.

22 A I thought you said --

23 Q Excuse me, could I please finish my question?

24 The rate for Class B is still 62 and a half  
25 cents. And in year two, what has changed, there's not

1       been another rate case, but there has been a change in  
2       consumption as between the two rate classes.

3           A       And that is correct, and if you run the cost  
4       of service, that would be the amount assigned for those  
5       rates based on the cost of service and based on the  
6       usage. I don't understand how to explain it any better.

7           MR. WISEMAN: Mr. Chair, I believe the witness  
8       is avoiding answering the question. I believe I'm  
9       entitled to question -- this is simple, Ratemaking 101.  
10      You don't have to go to ratemaking school to answer this  
11      question.

12          MS. CLARK: Mr. Chairman, I object to the  
13      question. It has been asked and answered. Mr. Wiseman  
14      doesn't like the response. The witness has explained  
15      the consumption has changed and that makes it  
16      appropriate for the amount to be more. I don't know  
17      what else we need.

18          CHAIRMAN CARTER: Ms. Helton?

19          MS. HELTON: Mr. Chairman, I agree with Ms.  
20      Clark, this has been asked and answered.

21          CHAIRMAN CARTER: Okay, sustained. Move on,  
22      Mr. Wiseman.

23          MR. WISEMAN: All right, we will move on.

24          CHAIRMAN CARTER: Commissioner Skop?

25          COMMISSIONER SKOP: I guess the practitioners

1 are getting restless, so I'm going to ask an intervening  
2 question in an attempt to kind of defuse tension here.

3 CHAIRMAN CARTER: You're recognized.

4 COMMISSIONER SKOP: Good morning, Ms. Deaton.

5 THE WITNESS: Good morning.

6 COMMISSIONER SKOP: I want to refer you to  
7 page 13 of your rebuttal testimony, line 23, where you  
8 discuss the GBRA adjustment on pages 20 and 21 of your  
9 direct testimony.

10 THE WITNESS: I'm sorry, you're on rebuttal or  
11 direct?

12 COMMISSIONER SKOP: I'm on rebuttal that  
13 refers back to your direct, so my question will  
14 ultimately be concerning your direct testimony that is  
15 referenced within your rebuttal testimony, if you will.

16 THE WITNESS: Okay.

17 COMMISSIONER SKOP: So referring back to page  
18 20 of your prefiled testimony, you discuss the  
19 generation base rate adjustment mechanism and how that  
20 GBRA mechanism will be utilized.

21 THE WITNESS: Yes.

22 COMMISSIONER SKOP: If I can refer you to  
23 lines 11 through 13 of your prefiled testimony, you  
24 discuss how the percentage is based upon the amount  
25 presented in the need determination proceeding, is that

1 correct?

2 THE WITNESS: That's correct.

3 COMMISSIONER SKOP: Okay. I guess my  
4 question, and I have two questions relating to how the  
5 mechanism works, because, again, I'm still trying to  
6 make sure I completely understand it so that it's fair  
7 to the ratepayers, but equally fair to the extent that  
8 it does avoid regulatory lag based on some of the  
9 perceived advantages. But under GBRA, what happens when  
10 FPL is not bound to a cost estimate within a need  
11 determination, such as what happened with the Riviera  
12 Beach and the Cape Canaveral conversion projects when  
13 the Commission waived the bid rule for these projects  
14 over my objection?

15 THE WITNESS: Those costs were presented in  
16 the need determination. It's my understanding we're  
17 bound by those costs.

18 COMMISSIONER SKOP: But if you waived the bid  
19 rule, would you not be bound by those costs? Couldn't  
20 FPL theoretically make the argument that the Commission  
21 waived the bid rule, therefore the costs presented are  
22 not the estimated costs to which FPL would be bound  
23 under the need determination?

24 THE WITNESS: That's not my understanding.

25 COMMISSIONER SKOP: And you would state that

1 for the record?

2 THE WITNESS: Yes.

3 COMMISSIONER SKOP: Okay. Referring to the  
4 next case on the same page, page 20, lines 17 through  
5 18, you discussed the scenario when the actual capital  
6 expenditures for a project are less than the projected  
7 costs. What happens when there's a cost overrun on a  
8 project?

9 THE WITNESS: Cost overrun is -- according to  
10 the rule, FPL would have to come to this Commission for  
11 a prudency determination and show that it was caused by  
12 extraordinary causes, beyond the control of the utility,  
13 before any of those cost overruns would be included in  
14 base rates.

15 COMMISSIONER SKOP: Okay. And then just one  
16 brief line of questioning, again, still in relation to  
17 your direct testimony, but the predicate for asking it  
18 is in your rebuttal it's referred to.

19 On page 12 of your rebuttal testimony, lines  
20 14 through 16, you discuss the expected fuel savings  
21 that I guess result is -- result from the Commission  
22 continuing the GBRA treatment. I'm trying to get a  
23 better understanding of that, and if I could refer your  
24 attention to your prefiled testimony, Exhibit RBD-8, and  
25 I would like you to briefly walk me through this,

1 because I guess I'm trying to understand -- at least  
2 from my perspective, it seems to be an apples-to-oranges  
3 comparison.

4 I understand that you make a capital  
5 investment, and as you would, you wouldn't be making the  
6 investment unless you had some sort of tangible benefit  
7 to the ratepayer either through additional need for  
8 capacity or fuel savings or what-have-you, but I'm  
9 trying to understand what fuel savings, which is a pass-  
10 through cost, have to do with GBRA, which is a cost  
11 recovery mechanism, and in relation to RBD-8, you  
12 identify some previous plants that have come in service,  
13 Turkey Point 5, West County 1 and West County 2 that  
14 will come in later this year, as well as project West  
15 County 3 that won't come in service for about another  
16 year and a half or so. Then you also, in the second  
17 column, talk about the jurisdictional fuel savings, and  
18 then the next column is the jurisdictional revenue  
19 requirement.

20 With respect to the jurisdictional fuel  
21 savings, are those annual savings or are those savings  
22 that are projected over the life of the respective  
23 project?

24 THE WITNESS: No, the savings projected over  
25 the life of the project were presented in the need

1 determination. This simply shows that the first-year  
2 revenue requirements, the revenue requirements that are  
3 put into base rates, how the fuel savings match during  
4 those first 12 months that the GBRA would be in effect.  
5 And you can see for Turkey Point 5 those are actual fuel  
6 dollars, and there was a net savings to the customers of  
7 \$13 million for that first year. And, of course, as it  
8 goes on, the fuel savings would continue to increase  
9 over the life of the plant.

10 COMMISSIONER SKOP: Why would they continue to  
11 increase?

12 THE WITNESS: As the -- they're in service --  
13 well, it would depend on fuel forecasts, of course,  
14 actual fuel prices, but the savings would continue, not  
15 necessarily increase.

16 COMMISSIONER SKOP: Would the jurisdictional  
17 revenue requirement continue to increase each year?

18 THE WITNESS: No, the jurisdictional revenue  
19 requirement is an interim measure until the next base  
20 rate increase, where it would be readjusted for the net  
21 plant in service.

22 COMMISSIONER SKOP: Okay. And with respect to  
23 the footnote at the bottom of that exhibit, it indicates  
24 that the West County Units 1, 2 and 3 fuel savings were  
25 estimated based upon fuel prices as of November 6, 2008,

1 is that correct?

2 THE WITNESS: That's correct.

3 COMMISSIONER SKOP: And you would agree, would  
4 you not, that since that time, natural gas prices have  
5 significantly declined even below historic norms? I  
6 believe as of yesterday they were about \$2.60 per BTU.

7 THE WITNESS: Yes, if the gas prices go down,  
8 then the fuel savings would also go down, but when gas  
9 prices, if they do go back up, the fuel savings would  
10 increase.

11 COMMISSIONER SKOP: But all things being equal  
12 in terms of why GBRA is a good thing or not a good  
13 thing, it relatively has nothing to do with fuel prices,  
14 is that correct?

15 THE WITNESS: It has to do with sending proper  
16 price signals. The fuel savings will be recognized  
17 through the fuel clause, and if the base rate increases  
18 that cause those fuel savings are not shown in base  
19 rates, customers will have a low price signal, which  
20 will indicate to them to have uneconomic usage, and they  
21 would increase their usage.

22 COMMISSIONER SKOP: Actually, I guess I'm  
23 perplexed by that. I can understand consumers having  
24 price signals for time-of-use pricing, but I have never  
25 known a consumer to be conscious about natural gas

1 prices, so --

2 THE WITNESS: I believe Witness Morley  
3 testified that that is a factor in her load forecast.

4 COMMISSIONER SKOP: Okay, thank you.

5 CHAIRMAN CARTER: Mr. Wiseman?

6 MR. WISEMAN: Thank you, Mr. Chair.

7 BY MR. WISEMAN:

8 Q Ms. Deaton, would you agree that to drive a  
9 cost-based rate, you would need to take into account  
10 both costs and offsets to cost?

11 A The revenue requirements reflect the total  
12 cost, including any lower -- if costs are lower, it  
13 would reflect the lower cost. It reflects the revenue  
14 requirements, whatever they are.

15 Q And so you would take into account items that  
16 increase costs and you would take into account items  
17 that decrease costs, right?

18 A If costs are lower, that would be reflected in  
19 the revenue requirements.

20 Q So is that a yes?

21 A I don't quite understand your question, items  
22 that decrease cost. If costs are lower, they are what  
23 they are.

24 Q Right, but if you have -- costs are what they  
25 are, but if you have an item that would act as a credit

1 against the costs, or debit of some type, you would take  
2 that into account, wouldn't you?

3 A I'm not the accounting witness, so I -- I take  
4 the revenue requirements that are presented by the  
5 accounting witness and developed through the cost of  
6 service by the cost of service witness and develop  
7 rates.

8 Q Okay. I believe it's your testimony that the  
9 GBRA mechanism is a cost-based rate, is that correct?

10 A That's correct.

11 MR. WISEMAN: If I can have another exhibit  
12 marked for identification?

13 CHAIRMAN CARTER: 485. Short title?

14 MR. WISEMAN: GBRA, No Adjustments.

15 CHAIRMAN CARTER: GBRA, No Adjustments.

16 (Exhibit No. 485 marked for identification.)

17 BY MR. WISEMAN:

18 Q Ms. Deaton, am I correct, you sponsored -- you  
19 have been handed a document that has been marked for  
20 identification as Exhibit 485, which is FPL's response  
21 to SFHHA Interrogatory No. 36. Am I correct that you  
22 sponsored the answer to this interrogatory?

23 A Yes.

24 Q In the interrogatory, the first part of it, we  
25 asked you whether FPL intends to make adjustments to

1 base rates to reflect depreciation and retirements, is  
2 that correct?

3 A That's correct.

4 Q And in the latter parts of the question, we  
5 asked whether under the GBRA mechanism FPL intended to  
6 make adjustments to base rates based on customer growth  
7 or new parity studies, is that correct?

8 A That's part two of your question.

9 Q And part three?

10 A Yes.

11 Q Okay. Am I correct that FPL does not intend  
12 through the GBRA mechanism to make adjustments to  
13 reflect depreciation, plant retirement, customer growth  
14 or new parity studies?

15 A No. As with any other item put into base  
16 rates, adjustments would not be made until the next base  
17 rate case, and then this isn't a measure to put into  
18 place into base rates, the capital cost of large plants  
19 that are producing fuel efficiency improvements for  
20 customers.

21 MR. WISEMAN: Mr. Chair, if I could have  
22 marked as the next exhibit in order another --

23 CHAIRMAN CARTER: No. 486.

24 (Exhibit No. 486 marked for identification.)

25 CHAIRMAN CARTER: Commissioner Skop?

1 MR. WISEMAN: The short title -- I'm sorry?

2 COMMISSIONER SKOP: If you'll yield for one  
3 second, please, with respect to the last exhibit that  
4 was placed or handed out in the last line of question,  
5 in the response to that question, which is South  
6 Florida's Hospital first set of interrogatories,  
7 Interrogatory No. 36, page 1 of 1, the answer talks  
8 about the GBRA mechanism and the -- that under the  
9 current GBRA mechanism there is no additional adjustment  
10 made to base rates other than the true-up to be made in  
11 the event that actual capital expenditures associated  
12 with the unit are less than those that were approved  
13 through the need determination pursuant to the Power  
14 Plant Siting Act for that unit. So --

15 THE WITNESS: Yes.

16 COMMISSIONER SKOP: -- if that's a complete  
17 response, that would, at least to me, and I would like  
18 to get your opinion, suggest that any cost overruns on a  
19 given unit for which this Commission approved a need  
20 determination would need to be dealt with via a separate  
21 limited proceeding, is that correct?

22 THE WITNESS: That's correct. The current  
23 GBRA mechanism only accounts for lower capital costs.

24 COMMISSIONER SKOP: Thank you.

25 CHAIRMAN CARTER: Mr. Wiseman?

1 MR. WISEMAN: Thank you, Mr. Chair.

2 BY MR. WISEMAN:

3 Q Ms. Deaton, you have a document before you  
4 that has been marked for identification as Exhibit No.  
5 486?

6 A I don't have numbers.

7 MR. WISEMAN: I'm sorry, actually, I don't  
8 think we gave this one a short title. The short title  
9 would be Impact of Depreciation on Rates.

10 BY MR. WISEMAN:

11 Q Ms. Deaton, do you have that now?

12 A Yes.

13 Q It's a diagram?

14 A Yes.

15 Q Okay. Now, let me make clear that we're not  
16 talking about cost of service in this diagram. I just  
17 want to ask you questions about the relationship between  
18 rate base and depreciation.

19 Now, can you turn to page 1 of the exhibit?  
20 Do you have that?

21 A I'm there.

22 Q Now, would you agree that -- you see where we  
23 say, "Rate case one authorized rate," do you see that?

24 A Rate case with no addition to rate base, is  
25 that --

1           Q     Yes, the page that says, "Rate case with no  
2 addition to rate base."

3           A     Yes.

4           Q     Okay. And there's a line that goes -- it's a  
5 horizontal line that goes, I don't know, a third of the  
6 way across the page that says, "Rate case one authorized  
7 rate," do you see that?

8           A     Yes, I do.

9           Q     And underneath that there is a triangle, or at  
10 least what was supposed to be a triangle, that says  
11 "depreciation." Do you see that?

12          A     Yes.

13          Q     Okay. Now, would you agree, as a general  
14 proposition, the way that rates work, the Commission  
15 sets a rate based upon the rate base and other factors,  
16 that rate remains in effect and continues until the next  
17 rate case, and during the time that that rate is in  
18 effect, depreciation of rate base is accumulating and  
19 it's not actually recognized in rates immediately, is  
20 that correct?

21          A     There is depreciation, there is additions, all  
22 kinds of things going on in between rate cases, and the  
23 Commission has surveillance reports to indicate when the  
24 utility may need to come in for a rate case.

25          Q     Ms. Deaton, I'm not asking you about a

1 specific regulation by the PSC in this instance. I'm  
2 talking about general ratemaking. Again, we're on a  
3 page that says, "No addition to rate base."

4 A Okay.

5 Q And the question is, as a matter of general  
6 ratemaking, when a rate is set, it remains in effect and  
7 depreciation takes place that accumulates, but it  
8 doesn't change the rate that's in effect at that time,  
9 isn't that correct?

10 A Rates are set until the next rate case, absent  
11 a limited proceeding rate case or a GBRA mechanism or  
12 some other way to change the rates, but the rates stay  
13 in effect until they're changed.

14 Q So the answer to my question was a yes,  
15 correct?

16 A Yes.

17 Q Okay. And then when rates are reset -- and  
18 again, here we are in this instance, we're assuming that  
19 there's been no addition to rate base.

20 In rate case two, what happens is because  
21 there's been no addition to rate base, all that  
22 depreciation that's been accumulating gets recognized,  
23 which would mean if there's been no addition to rate  
24 base, you're going to have a lower rate, right, all  
25 other things being equal?

1           A     I'm not the depreciation witness.  If revenue  
2 requirements are lower, rates will be lower.

3           Q     You're the rates witness.

4           A     And I work with revenue requirements.

5           Q     And depreciation most certainly gets  
6 recognized in revenue -- in setting revenue  
7 requirements, doesn't it?

8           A     The depreciation reduces net plant -- gross  
9 plant in service.

10          Q     Right.  And doesn't this page reflect that  
11 what happens is you -- again, because you've recognized  
12 that accumulated depreciation, you're going to have a  
13 lower rate in year two?

14          A     Yes, if accumulated depreciation has gone up  
15 and there is no addition to rate base, then total  
16 revenue requirements will be lower and rates will be  
17 lower.

18          Q     And hopefully we can go through the next two  
19 pages really quickly.

20                     Page 2 says, "Rate case additions to rate base  
21 do not equal prior rate base," so what this reflects is  
22 that if there has been some addition to rate base that  
23 accumulated depreciation is going to get recognized,  
24 however, the rate will go up somewhat because there has  
25 been an increase to rate base, correct?

1           A     I'm not sure I'm following this diagram.

2           Q     Sure, okay. We have rate case one. The rate  
3 has been set, depreciation is accumulating. Then there  
4 is an increase to rate base, which is portrayed here by  
5 the, I don't know, I guess it's a blue line, and what  
6 happens is because there's been an increase to rate  
7 base, the rates are going to go up, but they don't go  
8 all the way up to the top of what the addition would be,  
9 because it's taking into -- the rate that is being set  
10 is taking into account the effect of accumulated  
11 depreciation, isn't that right?

12           A     You're assuming the increase to rate base is  
13 less than the accumulated depreciation at the time of  
14 the increase?

15           Q     No, the rate -- no, I'm assuming that the  
16 increase to rate base does not bring the rate base up to  
17 the level that it was at at the time that rates were set  
18 for rate case one.

19           MS. CLARK: It sure looks like that's what's  
20 on the chart. I'm a little confused. The blue line --  
21 BY MR. WISEMAN:

22           Q     Let's just -- I actually agree, this was not  
23 done quite the way I had anticipated, but it still  
24 illustrates the same point. Actually, let's go with the  
25 way the diagram actually is drawn.

1           The addition to rate base actually brings it  
2 up, brings rate base back to exactly where it was when  
3 rate case one took place, but there's been accumulated  
4 depreciation between rate case one and rate case two, so  
5 when the rate case two authorized rate is set, it's  
6 going to be somewhere -- it's not going to go all the  
7 way back up to where it was, because you have to take  
8 into account accumulated depreciation, right?

9           MS. CLARK: Mr. Wiseman, I -- but it sure  
10 looks like that's what's being illustrated on this. It  
11 goes back up to the rate --

12           MR. WISEMAN: No, it doesn't go back up. If  
13 you look at the line where it says "rate case two  
14 authorized" is somewhere -- it's lower than rate case  
15 one.

16           THE WITNESS: If your assumption is that the  
17 revenue requirements at the time we have the second rate  
18 case, this rate case two, are lower than the revenue  
19 requirements were when we set rate case one rates, then  
20 rates would be lower.

21 BY MR. WISEMAN:

22           Q     Okay, fine. Let's just to go page 3, and  
23 hopefully we can get through this one quickly.

24                   On this page the additions to rate base exceed  
25 the rate base that was used to set rates in rate case

1 one. That's reflected by the blue line. Do you see  
2 that?

3 A Yes.

4 Q So again, though, the rate doesn't go all the  
5 way up to what would be set based upon the increases to  
6 rate base, because you have taken into account the  
7 effect of accumulated depreciation, right?

8 A If you have a limited rate case for this  
9 addition to rate base, you would increase rates for that  
10 one asset, you would not take into account depreciation  
11 of everything else. I believe Witness Ousdahl has  
12 testified that the GBRA does not change anything for  
13 earnings.

14 Q I didn't ask her about GBRA and I'm not asking  
15 about the FPL rate case, I'm talking about setting rates  
16 in general. The question is simply, doesn't this  
17 illustrate accurately that accumulated depreciation has  
18 an impact on setting rates?

19 A Along with plan additions, along with O&M  
20 expenses, along with everything else that goes into the  
21 cost of service.

22 Q All right, great, we can move on.

23 MS. CLARK: At the appropriate time, I think  
24 I'm going to object to this based on the conversation  
25 and what Mr. Wiseman said, because I don't think it

1 illustrates the point he's trying to make and it's a bit  
2 confusing.

3 CHAIRMAN CARTER: Let's move on.

4 MR. WISEMAN: If we could have marked another  
5 exhibit for identification?

6 CHAIRMAN CARTER: No. 487.

7 THE WITNESS: Are we going to come to a break  
8 soon?

9 CHAIRMAN CARTER: Oh, you need a break? At  
10 eleven o'clock.

11 MR. WISEMAN: Are we going to go forward,  
12 or --

13 CHAIRMAN CARTER: No, at eleven o'clock. It's  
14 not eleven o'clock by my watch.

15 This is 487 and it is GBRA Ignores  
16 Depreciation.

17 (Exhibit No. 487 marked for identification.)

18 MS. CLARK: Mr. Chairman, could we take the  
19 break now? Ms. Deaton has a bad back and I think she  
20 needs the break.

21 CHAIRMAN CARTER: We'll come back at ten  
22 after.

23 (Brief recess at 10:54 a.m.)

24 (The transcript continues in sequence with  
25 Volume 32.)

## 1 CERTIFICATE OF REPORTER

2 STATE OF FLORIDA )

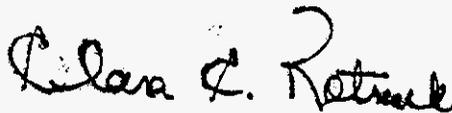

3 COUNTY OF LEON )

4 I, CLARA C. ROTRUCK, do hereby certify that I was  
5 authorized to and did stenographically report the  
6 foregoing proceedings at the time and place herein  
7 stated.

8 IT IS FURTHER CERTIFIED that the foregoing  
9 transcript is a true record of my stenographic notes.

10 I FURTHER CERTIFY that I am not a relative,  
11 employee, attorney, or counsel of any of the parties,  
12 nor am I a relative or employee of any of the parties'  
13 attorney or counsel connected with the action, nor am I  
14 financially interested in the action.

15 DATED this 10th day of September, 2009, at  
16 Tallahassee, Leon County, Florida.
