(page 9)

The Nuclear Fuel Forecast model was used to project fuel costs. The ~~2013~~ 2016 Fuel Cost Projections used in the impending rate case filing

21 are consistent with the Approved Operating Schedule dated ~~June 22, 2011~~ August 12, 2015.

Ruben,

Is the current operating schedule dated 8/12/15? I need to provide the FPL outage schedule for 2017 and 2018 in a Rate Case schedule and wanted to make sure this is the latest version. Also, please take a look at pdf page 9. For the nuclear fuel assumptions, I assume the statement will be the same with the date of the operating schedule updated. Do you agree?

Thanks

Lisa

Hi Lisa,

I am working on gathering data for MFR F-08 Test and SYA, which asks for a schedule of assumptions. I've attached what we filed in the last rate case for reference. Can you please take a look at sections V and VII (2) and let me know if you can provide the data? I believe V is probably split between nuclear and PGD, so just those sections that pertain to nuclear.

Thank you,

Kathleen Campanella
