

CCGT is identical to Riviera with the exception that combustors are newer here (1.4 vs. 1.3) also have Siemens STG here as opposed to what is @ Riviera

Used to have steam units similar to Turkey Point demolished them several years ago

3 tanks - Fuel Oil, Raw water, Demin Water

12 CT peaking units - identical to Lauderdale CTs

Plant site was remediated as part of the demolition of oil units, oil tanks + soil removed as part of that
