Tallahassee, Florida 32399-0850

Re: Docket Nos. 160021-EI, 160061-EI, 160062-EI, and 160088-EI

Dear Ms. Stauffer:

Enclosed for filing in the above referenced dockets, please find 5,768 comments urging the Commission to deny FPL's requested rate increase. Sierra Club collected the comments from individuals and households throughout FPL's service territory. This includes 1,536 comments with personalized messages explaining the hardship posed by any rate increase. Commenters also emphasize their objection to FPL asking customers to fund more gas-burning power plants that are neither necessary, nor a good value given competitive alternatives in the market such as solar power and energy storage, which FPL has repeatedly acknowledged can lower the cost of service. Should you have any questions regarding this filing, please contact me.

Sincerely,

/s/ Nachy Kanfer

Nachy Kanfer
Deputy Director, East
Sierra Club Beyond Coal Campaign

8/2/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As a longtime and fulltime retired household served by FPL any rate hikes is a real potential problem for us.

Sincerely,

Chas & Claudia White
1201 21 Ave. W., FL 34221

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Florida does not need more power plants run on fossil fuels. Florida needs clean, renewable energy and we need it now. I absolutely oppose any new power plants that burn fossil fuels and I oppose raising rates to pay for them. Our rates go up to pay for a new plant that makes money for the power company and they never go down again even after the plant is completed. We are being overcharged while the power companies continue to destroy the environment. Climate change is real and it is happening NOW. South Florida could be under water in as little as 20 years; adding more fossil fuel powered plants will only speed up the process. STOP THE MADNESS. Your job is to regulate the industry, not make it easy for them to rake in more money while exacerbating global warming. Do your job and DENY this proposal.

Sincerely,

Jeri Khajeh-Noori
3062 Eastland Blvd Unit 101, FL 33761

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Florida is in prime position to lead our entire nation in the implementation and use of solar power and reduce our dependency on fossil fuels. FPL should be leading the charge toward cleaner, safer, more sustainable and environmentally friendly energy, not promoting further dependency on fossil fuels.

Sincerely,

Carmen Campbell
1680 Arizona Ave NE, FL 33703

8/2/2016

Dear Commissioners,

FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Florida is the sunshine state most behind in gaining from the sunshine. The reasons are that FPL wants to make sure it's revenue base is secure while it's perspective on the electric supply is unnecessarily opposed to using a lot more solar. Fracking for natural gas to supply this as a fuel is a horrible ingredient since it would by default pollute the precious water supply. All new construction should include solar installations wherever possible. While FPL has built some solar installations the more personal and local sources being integrated into the grid are lacking and have been a political nutshell game for a long time. BLAH BLAH BLAH!! My community of thousands of retirement apartments in four story catwalk buildings might have included solar rooftop while also being integrated into the grid. This might have saved millions of tons of coal, nuclear fuel rods and other CO2 fuels in the past 30+years.....Again BLAH BLAH BLAH!!

Sincerely,

Karl Schwartz

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am an FPL customer and am very disappointed that, as "the sunshine state", we rank 15th in the nation for solar power. Here is our chance to be a true leader in clean energy. Climate change is a reality and gas as a "bridge fuel" is too little, too late. The environmental damage done from fracking is too great. Choose clean energy- choose solar.

Sincerely,

Matt Johansen

Personal Message:

It is time for Florida to embrace renewable energy and encourage each citizen to install roof top solar systems. This is the path to economic freedom and sustainable energy without investment in obsolete fossil fuel based or nuclear based energies that can only damage the environment. It is time for freedom of the people from the charges of companies such as FPL who want to dominate for profit the people of Florida. We need freedom and no more rate hikes to fund their polluting industry.

Sincerely,

Jerry Myers

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Now is the time to transition to sustainable energy; replace gas and oil operations with solar and wind farms.

Sincerely,

Karen Dwyer
15937 Delasol Ln, FL 34110

8/2/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

A rate hike for fossil fuel is wasting money. You know coal is on its way out. Open your minds and eyes and see the truth. I will not pay for your foolishness.

Sincerely,

Lynn Moshier
4705 1st St NE Apt 337, FL 33703

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

A rate hike to pay for more dirty fuels? No thanks. What is FPL getting for selling the energy from the wind mills they own in Texas? We need clean energy now and in the future.

Sincerely,

Paula Morgan
833 Spinnaker Dr E, FL 33019

How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As an FPL customer, I hope the PSC will give serious consideration to all of the above in evaluating the necessity of a rate increase. Send FPL back to the drawing board.

Sincerely,

John Newman
1074 Pompei Ln, FL 34103

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As the regulatory board, it is up to you to stop this proposed rate hike to finance construction of outdated power generation technology. If the electric power companies continue to do the same thing....burn fossil fuels...nothing changes. We are too smart of a society to let this continue. Ask them to first justify the need for more power generation; and second to re-focus their energies on renewables...pun intended....and get to work on building solar and wind farms. Florida is the perfect environment for both! And the cost is a fraction of that needed for the gas burning plant and the associated highly controversial pipelines, all of which spell environment disaster. Please, stand up for what is right in an age when all too often only profit matters. It is past time for Florida to become a leader in all things healthy and smart. Thank you.

Sincerely,

Leah Gentry

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

ENOUGH IS ENOUGH !

Sincerely,

Barbara Wyatt
1708 NE 9th St, FL 33304

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

Personal Message:

Florida already has one of the worst regressive tax systems in the US. This rate hike would add insult to injury as EVERYONE, renter or homeowner/ rich or poor/ has to pay utility bills. It is not only incredibly unfair and overburdensome to the poorest among us, it also rewards outdated utility sources. We should be working to help the poor and develop renewable energy sources.

Sincerely,

Felicia Bruce

How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

FPL does not need to raise rates we already pay more than our share for electricity

Sincerely,

Kent Welch

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

FPL does not play fair with the consumers. You give them much too much. Are they paying you off?

Sincerely,

Eileen Rowe
708 Camelia Trl, FL 32086

Personal Message:

FPL has enough technology to go green and eliminate fossil fuel burning by 80%. I know they have the plan for tapping into the gulf stream for power, since I wrote and designed it in 1972. We have wind and solar at our disposal in Florida, through out the state. There is no need to build more gas burning plants.

Sincerely,

Robert Zeitlin

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

FPL needs to add more solar energy rather than fossil fuel to meet the needs of Floridians. That money that would be spent on gas burning power plants could be used to help low income homeowners put solar panels on their roofs. All gas must now be obtained by fracking. Fracking is damaging to our environment and our drinking water.

Sincerely,

Rosanne Maji

Personal Message:

FPL needs to distance itself from using natural gas as soon as possible. More natural gas use means more excuses to condone fracking. The Sunshine state should use its natural nuclear power from the sun to switch to solar power production in this state. I fear that FPL is way too cooperative with the gas industry.

Sincerely,

Helen Jo Williams

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Haven't they bled people enough! We need to speak up and say enough is ENOUGH!

Sincerely,

Joan Ellis

Personal Message:

I am a FPL customer: solar energy or wind energy is a readily available resource in the sunshine state. These alternative resources would have less of an environmental impact - I am very disappointed in FPL covert attempt to increase costs on customers with little regard for our health or precious environment. FPL could install efficient Solar energy panels throughout the state, and be able to give the grid power back, and decrease customer cost, which makes me question the motivation behind their decision. This gas use sounds more like FPL wants to keep corporate power burning stronger and longer.

Sincerely,

Judith Spriggens
1970 SW 18th Ct, FL 33145

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am against any money for fossil fuel sources. This money could, and should be for Solar & Wind based energy initiatives, which will provide thousands of jobs, plenty of electricity, and much less polluting effects for our atmosphere.

Seems that the Electric lobby continues to ignore, not only Science backed proof of how fossil fuels cause warming - but the fact that many places in the World are working toward, and due to go Off Grid in the near future. Maybe The persons in charge are fossils, and need to wake up- or retire. Letting Science, and educated people in to transform our Energy policies is the wave goodbye to the past. Get with the future. There is no future in Fossil fuels.

Sincerely,

Courtenay Hayes
308 Clayton Ave, FL 32901

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am an FPL customer and disapprove any increase. Create clean energy in Florida with solar or wind. Please stop the fossil fuel use!

Sincerely,

Raymond Zamora
801 SW 191st Ter, FL 33029

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am an FPL customer and feel solar is the way we should be headed.

Sincerely,

John Finnerty
1369 NW 123rd Ter, FL 33026

Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I as resident of the State of Florida do not agree with rate hikes maybe it's about time you listen to the people and not the big business

Sincerely,

Theresa Boucher
1350 Westover st, Apt.727, FL 32935

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I do not want my rate hiked up to pay for fossil fuels!

Sincerely,

Judy Gjebre
12440 SW 84th Avenue Rd, FL 33156

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I feel that FPL, Progress Energy and Duke have gouged the state of Florida long enough - perhaps they could use the profit/interest from the billions received over the years for the nuclear power plants we paid for.

Also, what about adding/considering Solar and wind power? Has FPL considered this - other states use several methods for power.

Thank you

Sincerely,

Jeanna Orphanidys
8147 Elbow Ln N, FL 33710

It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I personally think. This is a bad bad idea and pray you vote no Thanks. Mr Stuart Petrie a fpl customer

Sincerely,

Stuart Petrie
615 N 4th St, FL 33462

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I prefer that FPL invest my monies in clean energy. Other Nations are using these more advanced energies while lowering their carbon footprint. I feel we could be part of that inovative future, with all the influence and potential that FPL has at its fingertips.

Sincerely,

Olga Feheley
1806 Atlantis Pl, FL 32303

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I strongly oppose a rate hike, to any of Florida's power suppliers, to pay in advance for a plant that may never be built or put in use. That the proposed plant is not in the best interest of Florida citizens makes this proposal even more onerous. Please turn down FPL's request. Lois Jolley

Sincerely,

Lois Jolley

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I strongly oppose anything to do with fracking which creates toxic waste, pollutes air and water, and causes earthquakes. Using a high-pressure acidic injection system on a limestone shale substrate like we have in Florida is insane and jeopardizes the aquifer and miles of crystalline underground rivers. All fracking infrastructure is a distraction and deterrent from clean sustainable renewables like solar, wind and tidal. Do the right thing!

Sincerely,

Susan Werb
561 SW Manor Drive, FL 34994

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

If you do not deny this flagrant request to further finance investors's earnings due to your known affiliation with FPL and his ties to fracking pipelines and more , then hopefully the Fla Supreme Court will see fit to stop this crime against customers. Just like they overturned your attempt to charge us for FPL fracking investments. A majority of FPL customers do not want fracking, pipelines, associated LNG ports and transportation via trains, pipelines etc.

You all will be remembered by the decisions you make to keep the Sunshine State in the dark whilst destroying 90% of our water and our lives.

Think about this carefully.

Sincerely,

Debra Johnson

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I'll gladly pay more for renewable energy, but I refuse to pay more money for any fossil fuels.

Sincerely,

Steven Wildones
302 S Palm Ave, FL 32951

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

It is vital that to continue the use of fossil fuels into the next decade does not prepare for life of the next generation

Sincerely,

Sherry Springer
4209 Russell St, FL 33469

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

It would seem that this rate increase would be better utilized if they were investing in sustainable energy solutions. Especially given the current global environmental crisis. But it seems that FPL is only interested in moving backwards and their pockets at the expense of its customers and our sensitive Florida environment. Shame on them.

Sincerely,

Randy Astwood

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Need to spend any new money on solar!

Sincerely,

Carolyn Moore
20550 Nalle Rd, FL 33917

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

please block this rate increase. Fixed incomes cannot tolerate this increase!!

Sincerely,

Rae Wright

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Please deny FPL's rate increase. FPL has, for years denied the environmental impact of discharge from its nuclear plant at Turkey Point. Because the impact is so severe it can no longer be denied, FPL now admits it was wrong, but not by the degree claimed by environmental scientists. This is another example of FPL's unwillingness to accept responsibility for its actions. The same will be true if the utility is allowed to increase its use of fossil fuel instead of investing in clean energy technology that will not exacerbate climate change.

Sincerely,

William Billings

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

So much of the Florida population are retirees and on fixed incomes. This would greatly impact our lives.

Sincerely,

Diana Olsen
6300 Lake Wilson Rd, FL 33896

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

The people of Florida have been raped enough by these electric companies. Go solar!!!

Sincerely,

Constance Carfrey
1341 Rebecca Dr, FL 33844

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

The Public Service Commission should be encouraging solar energy, because solar energy is one of Florida's most abundant resources. Solar makes more sense for Florida than natural gas, which pollutes with greenhouse gases and necessitates pipelines which destroy wildlife habitat, encroach on private and public property and leak greenhouse gases. In addition, the Commission should stop its efforts to restrict energy generation and sales to the large power companies. This practice contributes to the cost of electric power to Florida customers by restricting competition and discourages innovation in power generation and distribution.

Sincerely,

Mary Hrenda
9212 31st Street Ct E, FL 34219

Personal Message:

THIS IS GREED pure & simple, we the people are sick of your monopoly. FPL made 1.3 Billion last year in net profit, why should we pay a rate hike? You pay your Top Executives MILLIONS you have some nerve to give us a rate hike. CEO Robo collected \$30 million in 2015, the big prize came in the form of stock wealth. Through stock vesting, Robo took ownership of 208,000 shares of NextEra (NYSE: NEE) worth \$22 million. He exercised options on 50,000 shares of NextEra for a gain of \$3 million. Chief Financial Officer Moray Dewhurst \$10.8 million, Armando Pimentel \$8.1 million, Manoochehr Nazar, \$6.4 million. FPL already ripped off Miami residents for the Nuclear plant you NEVER built and have leaking nuclear waste. Now if you wanted to expand GREEN ENERGY with wind turbines & solar instead of natural gas I would reconsider. For many retired people that includes myself on a fixed income this will be a hardship, either pay the FPL bill or eat.

Sincerely,

Victoria Olson

Personal Message:

Thousands of your customers, at this time of year, are deciding between paying their utility bill or their rent. You made well over a billion dollars last year and do not a rate increase. Your customers could use your investment in greater participation in energy efficiency loans to lower their bills and keep our quickly warming planet livable. No more fossil fuel plants. They are putting us a destructive path of no return.

Sincerely,

Jerry Buechler
1719 SW Leafy Rd, FL 34953

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

To the devil with fossil fuels and fpl. Invest in sustainable ,renewable 21st century tech. and start repairing the damage done with the use of out dated carbon based energy sources. Let the new era of energy come.

Sincerely,

Karol Klein
12507 Duck Lake Canal Rd, FL 33525

Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

We need to round the corner toward fossil fuel free energy.

Sincerely,

Janet Stanko
13953 Athens Dr, FL 32223

8/3/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

We need to stop using fossil fuels and using more green technology

Sincerely,

Martin Sheehan
8817 N Atlantic Ave Lot 87, FL 32920

Personal Message:

Why do we allow public utilities to charge their users for infrastructure construction? We didn't prepay to McDonald's for the next one built. That's business. You, FPL, have been too cozy with the utilities you supposedly regulate. Look at the nuclear power fiasco that users prepaid for, did not get built, but no refund from the utility to the users who ponied up BIG TIME in rate increases to pay for the new nuclear plant. Let the utility take the risk, not pass it on to the users. That's how business usually works, especially without FL Public Service Commission rubber stamping whatever utilities want.

Sincerely,

Ricky Rowell

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Windmill fields and especially solar resources are viable alternatives to be explored before utilizing fossil fuels.

Sincerely,

Charles Rieders
458 Blakey Blvd, FL 32931

FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

With the cost of living increase of .02%, increase in health care costs, increase in homeowner taxes, we simply cannot afford more money for FPL to build power plants that use coal and ruin the environment. I am an FPL customer and live in Florida. I think solar energy is the better way to go and less expensive. I'm opposed to this rate increase.

Sincerely,

Sharon Leyland
8436 Kinglet Dr, FL 34224

Personal Message:

Wtf, as if the food prices, utility bills, insurance and cell phones, taxes, school tuition, automobiles and repair, and everything inbetween gone up dramatically throughout the years, but a person wage remains low, having people to have second jobs, or moving in with each other to cover the cost.

Now a person retirement age is 73 years old.

To old to enjoy the final their last years, plus the cost of dying.

Wow , what has become of the US, at one time looked ip upon, now ranks low in the worlds eyes. Once a hero, now a greedy nation of power, wealth, and health cost,

What ever happened in taking care of your people.

The rich would be utilized if they lead and had a middle class, good wages, fair prices on goods, that should be made in America and not imported from other and made in ither countries.

Let's have and make this country great again, simple solutions that was the pride at one time be whole again.

Sincerely

Renny Rosencrans

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I feel because we live in Florida we should be using more Solar power. The Florida Keys Cooperative makes solar power available to their customers. They even buy back power, and share.

Sincerely,

Jill Aronofsky
5781 sw 188 ave, FL 33332

8/4/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I forgot to add when I wrote before that we are customers of FPL for our condo in St. Augustine, FL.

We are very much opposed to our rates being increased unfairly. We urge FLP to explore lower cost alternatives and urge you to deny their request. With thanks.

Sincerely,

Barbara Probert
1522 SW 35th Place, FL 32608

Personal Message:

I was under the impression that we were the "Sunshine State". Why isn't FPL using more of that? We also have reliable tidal "power" up and down both coasts. How about harnessing that? And, we do get the occasional breeze--unbeknownst to FPL, it seems. FPL needs to get serious about using environmentally sound sources of power instead of doubling down on fossil fuels.

Sincerely,

Theodore Padgett
10099 Bentley Ave, FL 34224

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

In addition to the above, the PSC should reject FPL's request because of the ancillary risks and ecological damage associated with pipeline construction and operation. The pipelines, including the poorly planned Sabal Trail project would be needed only to transport fracked natural gas to FPL's power plants. The pipelines are a known source of methane leakage, which compounds the problem of GHG in our atmosphere.

I am an FPL customer, and I ask the commissioners to make the interests of FPL's customers and the health and safety of Florida's citizens their first priority.

Sincerely,

John Saathoff

8/4/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

They're just continually being paid to pollute and destroy the environment! When will it end?

Sincerely,

Judith Haglund
PO Box 3014, FL 34230

FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I work with low-income, minority communities. It is unconscionable to raise rates on people who cannot afford it, while, at the same time, using environmental destructive fossil fuels, when alternative energy sources, especially solar, are so readily available in Florida and such a smarter and more common sense alternative. Rate hikes should not put people in jeopardy who are already most vulnerable to extreme temperatures from climate change and the least able to adapt to those changes. Solar is the answer.

Sincerely,

Jeannie Economos
808 W Princeton St, FL 32804

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Our state is blessed with an abundant source of very low cost energy = sunshine. Florida's regulators should encourage utilities to build facilities that use solar energy -- not carbon fuel facilities that increase CO2, global warming and the rate of sea level rise.

Please do not raise rates to fund more carbon fueled power plants. Florida should be leading the US in solar power, not adding carbon fuel plants. Thank you for considering my input.

Sincerely,

Brian A Mayhew
53 Isle of Venice Dr, FL 33301

8/7/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am an FPL customer who believes that rate increases should NOT be used to fund more fossil fuels.

Sincerely,

Sue Michel
200 Cocoanut Ave Apt 10, FL 34236

Personal Message:

This is clearly a turning point for the future of our planet and the legacy we leave behind for future generations. Considering the damage that already has been done, we need radical, unprecedented action to begin the healing process. Our greatest hope should be that it is not already too late. "We are the most dangerous species of life on the planet, and every other species, even the earth itself, has cause to fear our power to exterminate. But we are also the only species which, when it chooses to do so, will go to great effort to save what it might destroy."

- Wallace Stegner

How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Your greed has no limits

8/12/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

US needs to take the lead and be an example to the world in regards to renewable energy. You are already lagging behind and the more time it takes the more difficult it would be. Start investing in renewable now!!

Sincerely,

Jan Berrios

Personal Message:

Among the many Native Peoples displaced by ruthless authorities since 1830, the Tribal members remaining in Florida deserve deferential treatment, not further persecution.

This proposed Big Cypress Reservation electricity factory is not the advertised friendly green energy plant in the middle of nowhere. This is an Everglades-eating, planet-cooking, water-fouling nasty knife in the back of the last of our Native Americans and a danger to all the world. "Natural" gas is not what the name implies. Released into your home, it will kill everyone in a matter of minutes?if it doesn't explode and blow up your entire neighborhood first. Gas is a non-renewable fossil fuel that creates billions of cubic feet of CO2 as a poisonous and climate-changing byproduct. It's no more natural than plutonium. Why put this next to the Big Cypress Reservation?

Sincerely,

Dr. John Dwyer
, FL 34110

9/8/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am disabled and definitely do not need a rate increase.

Sincerely,

Ana Garrido Duero
, FL 33155

9/8/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

We are three sisters on Soc. sec. and can barely afford to keep the home we live in! Soc. Sec. doesn't go up as fast as our bills do . You can't keep doing this to us!

Sincerely,

Cheryl Oligney
, FL 34223

Personal Message:

As an FPL customer in Palm Beach County, our electric bills are already very high. As a senior, I'm concerned about the impact that future rate hikes will have not only on seniors but on our young people just starting out. The building of fossil fuel burning plants should not be necessary here in south Florida. We have so many options here in south Florida for the use of renewable fuel sources that should be fully investigated before the PSC allows FPL to resort to more gas-burning plants resulting in rate hikes for consumers. Thank you for taking care of consumers.

Sincerely,

Sheila Mandelbaum
, FL 33414

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Aside from the obvious environmental impact, it's simply not fair to the consumer. The consumer is the one who, in the end, bears the cost. The consumer though, was not even asked if he is willing to spend more money. Money consumer households are already stretched on their budgets and there is no consideration taken for that. If the company wants to spend money and invest in things without regard to customer cost and wishes, then they should do so at their own financial risk.

Sincerely,

Douglas Mincer
, FL 32909

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Considering FPL's lobbying of public officials to prevent consumers from accessing solar power easily and with reasonable cost, this rate hike is outrageous and counter productive to global initiatives on warming trends!

Sincerely,

Claire Susan Clarke
, FL 33460

9/9/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Do right for the people of Florida not the greedy power corporations.

Sincerely,

David Malott
, FL 32773

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Go Solar in the sunshine state!!!! Or wind, but keep fossil fuel in the ground!

Sincerely,

Tiffany Grantham
, FL 33020

Personal Message:

I am a Native Floridian, VN Veteran, and FPL customer; I'm proud of two. This State fights solar, while doing the bidding of fossil fuel lobbyists. It is blatantly obvious that money is playing a big part in granting wishes to Industry, while the people and environment suffer the consequences. I love Florida, and detest what our lawmakers allow to foul our water and air. "Here's \$25,000 for your 'campaign'. Now let's get on and 'get away with it'. Thank you, very much". These are not 'mistakes', this stuff is done with 'intent', and that's when it get's all legal. Be careful not to fall victim to collusion, we've got a lot of it happening in Tally, and a lot of shame to come. True Floridians are a diverse citizenry...farmers, fishermen, scientists, doctors and nurses, firemen, teachers, students, seniors, and some great legal experts, all of whom want a clean, healthy and affordable future for our children and grandchildren. Please work with us, thank you

Sincerely,

It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am an FPL customer and do not want to see a rate increase for more fossil fuels!

Sincerely,

Kathryn Jones
, FL 32128

9/9/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am an FPL customer and I do not want to pay for or use more dirty fuel, it is time for FPL to use low cost, clean energy alternatives such as solar energy or wind turbines.

Sincerely,

Deborah Monchek
, FL 33327

How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I'm an FPL customer and do not support the price increase. I think the way to go is green. Solar power is becoming very affordable, and Florida is a perfect place to invest in solar panels. Let's help the environment and, at the same time, invest in a more efficient and clean future.

Sincerely,

Donald Hammond
, FL 33165

9/9/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I'm an FPL customer wanting clean energy!

Sincerely,

Ernie Winn

Personal Message:

Instead of asking for a rate increase, FP&L should first invest the huge profits it makes in the replacement program. And instead of investing in obsolete generation plants, such as plants that burn carbon for power fuels to generate power, FP&L should be investing in solar power as the future source of electrical power. Either at the home site, which would cut maintenance costs to very low levels, or invest in hydrogen technology to generate electrical power. And if it would require them to not give everyone a large raise of big bonuses for a couple three years, then the company should simply tighten their belts as the majority of their customers have done this last decade.

Sincerely,

William Pellegrini

How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

More solar power, we're the "Sunshine" state, no?

Sincerely,

Tor Hermansson
, FL 33407

9/9/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Please, enough of the use of fossil fuels! There are ample other alternatives that are non harming and cancerous and literally killing our Earth and all upon it. This MUST be stopped for preservation of all.

Sincerely,

Linda Lippner

It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

The scientific connection of natural gas to climate change is due to methane leakage. CH₄ is known to be at least 50 times more powerful than burning natural gas in terms of its global warming potential. Methane leakage, which cannot be completely eliminated, will certainly increase because FPL is investing with Spectra Energy in hundreds of miles of new pipelines to supply natural gas to its proposed power plants.

The bottom line is we do not support a rate increase to pay for natural gas infrastructure that will only compound the impacts of climate change.

Sincerely,

John Saathoff
, FL 32901

9/9/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

There are a large number of elderly Florida residents on a fixed income. We can't pay higher rates!

Sincerely,

Linda Figueroa
, FL 32905

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

WE HAVE OTHERS ALTERNATE SOURCES OF ENERGY. STOP THE MAFIA CARTEL, THE GOV. CORRUPTION. TIME TO GO SOLAR, WIND POWER ETC..THE ANSWERS ARE OUT THERE AND THEY KNOW IT. STOP THE PONOOLY.P.

Sincerely,

Ibrahim Franco

9/9/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

You should be investing in more clean energy, not making us pay and be dependent on dirty fossil fuels. It is not all about greed, but you seem to think so. I am outraged you want to charge us more money, As a customer and a single parent, it is difficult enough to pay the high electric bills as it is. I have an idea, why don't you cut down the rate hike. Perhaps you could give some sort of credit on your next bill for paying the bills on time. It is way too high as it is. It is not fair to the consumers. Have a heart.

Sincerely,

Lynn Gaudette
, FL 32707

9/10/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As an FPL customer I oppose rate increase proposal, we need to stop our reliance on burning fossil fuels. We must protect our environment and planet and move to clean energy alternatives. Climate change is real and FPL needs to stop putting profits over human lives. I also hate the smart meters (those were jobs taken away from staff that read the meters, plus I oppose the radiation exposure of the smart meters). FPL Board members please stop the greed. Thank you in advance for your attention on the above concerns.

Sincerely,

Evelyn Salguero
, FL 33134

9/10/2016

Personal Message:

FPL is already too big and too expensive. For a family of 4 in a average home with a pool, my monthly bill is nearly \$400/ month this summer. My home a/c is set at 77 degrees. Wasn't the last rate hike intended for improved FPL infrastructure supposed to reduce consumer rates. Mine didn't decrease. Did yours? Seems to me the rates just keep climbing and we long term, native Floridians keep paying more for increased population (which we don't want, but can't seem to slow.) Many cannot afford to live here anymore.

Sincerely,

Edward Foley

It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

How about using some of this sun and ocean breezes we all love to provide more energy? Seems pretty stupid to stick with fossil fuel.

Sincerely,

Penelope Swan
, FL 34234

9/10/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

Personal Message:

I am an FPL customer and I also have a 10Kw rooftop solar system on my rooftop. If more owners added solar capacity to their rooftops, there would be no need for new power plants to be built. Solar reduces the peak demand on the grid via Netmetering. The customer gets a much lower electric bill and FPL doesn't need to build new dirty fuel power plants. It's a win-win for all. Natural gas is claimed to be "cleaner" fuel but often it's a byproduct of oil and FPL's parent company, NextEra engages in fracking in OK which will provide allegedly cheap natural gas for FPL to use (if the PSC allows it). Just as oil production is not environmentally friendly, the same is true for the hydraulic fracking process (increasing frequency of earthquakes in OK? I wonder why?). Solar wins all round, cheap, clean and environmentally friendly. FPL and the other utility companies should be welcoming this new technology, not trying to stop it via the misleading Amendment 1 proposal in November.

Sincerely,

Daniel Pearson

9/10/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I would GLADLY pay increased rates for meaningful renewable energy production, and I support allowing solar for homeowners with full storage and sharing.

Sincerely,

Sarah Dunagan
, FL 34990

9/10/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

no more hikes

Sincerely,

Lisette Alvarez
, FL 33023

Personal Message:

The timing is not a coincidence, they are simultaneously trying to block solar with an amendment, and blaming solar for infrastructure costs. BTW, they spent 12 million on campaign contributions and another 700thou. on advertising to pass amendment 1. Would have made a dent in the cost of the new plant *we would not need if we had more solar!*

Don't fall for misleading advertising!

Vote NO on 1!!!!

Sincerely,

Rebecca Davis
, FL 32174

9/10/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

There is no excuse for florida the "sunshine state" to not be going solar ...!

Sincerely,

Chris Hanna

Personal Message:

We live in "the sunshine stat" and it is ludicrous that we are not taking advantage of this free supply of energy. Drilling for oil is costly and extremely bad for the environment as we all have witnessed with repeated oil spills. Fracking for natural gas is causing earthquakes and destroying vast amounts of natural habitat. Coal burning plants are the worst of all! It is extremely dirty and the major destruction it has caused to the environment where it is mined is inexcusable!

Renewable energy is the ONLY energy source that makes sense. It's free, it's clean and it is our future! Act now and do the right thing for all of us, present and future!

Sincerely,

Rebecca Dulin

It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Why do you continue to strip the planet instead of utilizing what we have? Solar power? Knock it off. How much money is enough for you greedy bastards? Oh, that's right. It's never enough, it's about more.

Sincerely,

Paula Bloom
, FL 33441

9/10/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Why is my water bill 36.00 and FPL 200.00?

Sincerely,

Kelly Benoit
, FL 34957

How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As an FPL customer, my elec. bill is already \$150. a month. I only get \$1200. a month on SS. I just can't afford this. Our environment can't afford this either. Why aren't we investing in clean energy and fuels?

Sincerely,

Mayona Gentile
, FL 32174

9/11/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

California has low electric. They have solar power. My daughter billing every month is \$24.00

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am also concerned about what fracking will do to our ground water and the aquifer.

Sincerely,

Linda Colindres
, FL 33713

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I will not support more use of fossil fuel! I would, however, consider a small rate hike for solar or wind or geo thermal!

Sincerely,

Diana Brooks
, FL 34952

9/11/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

No rate hike

Sincerely,

Teri Pinto

Personal Message:

No rate hike! As it is, I am a one person household and do not use that much power. I wash my dishes by hand, minimal oven use, two loads of laundry each week, and keep my AC on 78-79 degrees, and my bill monthly has ranged from approx. \$70-100 plus from month to month with SAME usage!!!! Why???

Sincerely,

nancy fitzpatrick

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Seniors are having difficulty meeting their bills as it is. Congress wants to cut Social Security benefits. Last year there was no COLA. We can't afford higher bills.

Sincerely,

Lynn Lazarus
, FL 33411

9/11/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

We had enough of your rate increases . Especially if your going to keep killing the environment. Start getting into another type of energy source.

Sincerely,

Dennis Kratz
, FL 32940

9/11/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As a Native American- We have known- when will other People see and understand- Water is Essential to Life? If the pipelines break and the drinking water is contaminated- the people will no longer exist. The Oil industry plays on words. They say the massive quakes are not caused by Fracking, it is caused by normal oil drilling and pumping the water that is brought up, too contaminated to be brought onto land. Pumped back deep into the earth, in injection wells. Why would Oklahoma allow this Earthly Assault to be done? Knowing oil wells are causing quakes. When the pipelines are run under our waterways we are Risking our human life and existence. We are supposed to leave the world in a better way than we found it. Our Grandchildren are going to inherit what we have done. It is as though we live for Today, without any thought of Tomorrow. We must wake up! Deny rate increase and force them to go to clean Energy!

Sincerely,

Kay Haering

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As the "Sunshine State" I believe that we should set an example as a solar powered state. We the people are tired of the dependence on fossil fuels. We used to be on the leading edge of technology but because we have refused to change, to move forward embracing the new, the smarter, the better, we are no longer the country that everyone aspires to duplicate. We are so far past needing proof as to the high cost paid for using, mining and transporting fossil fuels. It is time to bite the bullet and move to a technology that supports life on the planet instead of just supporting living on the planet.

Sincerely,

Linda Kelley

Personal Message:

FPL is also collecting billions for 2 new proposed nuclear plants to be built South of Miami. They were proposed before 2006 and there is no firm date that they are to be finished. FPL makes huge political donations to buy influence in order to get their plans approved. They are the major reason the private people and industries are not allowed to sell solar power and Florida is so far behind most states using solar power. Stop these excessive profits that FPL makes.

I am an FPL customer.

I also used to work for FPL and was laid off after I reported to the NRC and supplied calculations and data that the Turkey Point air radiation environmental monitoring setpoint was 8 times the site boundary limits. FPL is more concerned with their profits than they are about their customers safety.

Sincerely,

Bill Klein

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am an FPL customer and see no reason why they feel that the electric company should build more gas-burning plants across our state. We have seen enough loss of sea life and human illnesses caused by pollution from fossil fuels.

Why put out commercials stating that you as a corporation are doing all that you can do to keep our rates low when you are trying to get a rate hike? This makes no sense except that you are lying to your customers.

Sincerely,

Pamela Dugan
, FL 34119

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

No more.

Sincerely,

Elba Montalvo
, FL 33470

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

We are paying more than enough now are you joking with the economy the way it is, give me a break, please!

Sincerely,

Elisheo Vera
, FL 32955

9/12/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

9/14/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As FPL customers, we urge you to advance clean energy SOLAR options instead of fossil fuel.

Sincerely,

Mr And Mrs Poole
, FL 33140

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Electric rates are high enough as it is. Plus, they are pushing solar so why more fossil fuel to add to the climate problem on earth. FPL needs to find a better cheaper way, not something that is going to hurt the economy and poor people who are already struggling and seniors who can't even get a SS increase plus the greedy Fed Govn taxes 85% of our SS which was a tax on top of all other taxes we paid. I say no to FPL.

Sincerely,

Carol Lowery

9/14/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

How about solar? Sun is free. Lots of it here in Florida. The sun shines even when it rains.

Sincerely,

Nancy Harkinson
, FL 33982

How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am an FPL customer and I take the threat of climate very seriously. Nothing is more important than protecting our environment and health.

Sincerely,

Georgia Nelson
, FL 33928

9/14/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am an FPL customer and oppose the rate hike: it is madness to continue to build fossil-fuel powered power generators.

Sincerely,

K Cornish
, FL 33028

9/14/2016

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

If anything they should be investing in developing more Earth friendly means of producing energy, not continuing along the same old path using methods that are known to be hazardous to our environment. Start working for the people. Please deny the FPL request.

Sincerely,

Susanna Gilmore
, FL 34293

Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

My bill is sky high now. Please no more rate increases!!!

Sincerely,

Carla Jackson
, FL 33142

9/14/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

My bills are enormous already!! OmG there were 140\$ of FEES on my last bill. I could lease a brand new 7 series BMW for what my electric bills are w/this monopoly company. We have no choice. My bills are almost identical year after year. (Scam) and I have made so many changes on my usage. Do NOT allow this rate hike!!! Where is the competition? Why do we not have another choice for electric.?? This is greed.

Sincerely,

D Preston

Personal Message:

Natural Gas is cleaner than coal but it emits half as much carbon as coal. Florida is called the sunshine state but less than 0.1% of Florida's energy comes from solar. This makes no sense. The rising water level at Miami and Fort Lauderdale is a serious problem and Florida along with the other states must significantly reduced carbon emissions. I am a customer of FPL. We live in Port Charlotte.

Mike Smith

FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Please note that I am an FPL customer, retired on a fixed income. I also am concerned about climate change and would like to see FPL explore and compare costs of using solar or other more environmentally friendly sources of energy.

Sincerely,

Pamela Skilling
, FL 32174

9/14/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Please protect Florida. This fragile state cannot continue to be pillaged for profit and power without suffering the loss of what made it wonderful.

Sincerely,

Nancy Clifton Flynn
, FL 32127

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Please say no to FPL rate hikes to build more dirty fossil fuel power plants spewing more CO2 into an already overheated planet. FPL needs to move more aggressively into solar and other renewables. The state of Florida should be especially sensitive to the ramifications of global warming and rising sea levels. Otherwise, we and our future all drown in ignorance and salt water.

Sincerely,

Wanda Bankston
, FL 32174

, FL 33305

9/14/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

we already pay too much for electricity. enough is enough

rose pierini

Sincerely,

Rose Pierini
, FL 33430

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

You need to add renewable sources, like solar, if you need to increase capacity. Over time, renewables should REPLACE gas, and especially, coal. Maybe more nuclear would also be good.

Sincerely,

Christopher Gerhart
, FL 32920

FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Additionally, solar energy becomes more affordable all the time, yet FPL blocks homeowners from using it. If additional capacity is truly needed, we should receive incentives for purchasing solar panels, rather than paying FPL for more fossil fuel plants. I am an FPL customer and thank you for your consideration.

Sincerely,

Suzie Duffin
, FL 32164

9/15/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As a long-time FLP customer, I vigorously oppose rate hikes to build more gas-burning power plants. We live in a state where solar energy is an obvious choice for increasing our power because we have so much sunshine virtually all year. Solar power is also clean energy and will not make the contribution to global warming that gas will. I am aware that with most bills, you include information that tries to sell the "cleanness" of gas. It is true that it is not the most polluting fuel, but it is too polluting when there are alternatives and when Floridians are already seeing effects from global warming. No more new gas plants--no rate hikes to build them.

Sincerely,

Susan Joy Smellie
, FL 34110

9/15/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

As a registered voter, I strongly object to any rate increases for FPL. We live in a very delicate ecosystem in Florida. Rather than pressing like dumb and dumber for more fossil fuels and nuclear like Turkey Point (already leaking nuclear tritium into Biscayne Bay), they should press for next generation solar plants now, for example. Hearings must be held to assure we don't blunder into the next decades without an improved strategic plan that addresses Florida's unique environment and the urgent issues of climate change.

Sincerely,

Michael Haley
, FL 33157

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Fossil fuels are no longer needed when there are more efficient and effective ways of heating and cooling and cooking! Let's get smart and start saving the only earth we have instead of destroying her for once let's consider our future and our children's children's future instead of lining the pockets of big companies with our money that we can barely afford now! We are on the brink of no return as it is please let's get it together now while we have a chance to change

Sincerely,

Cynthia Sharpe

Personal Message:

I am a divorced woman who just turned 70 (last week). My only source of income is Social Security. I had an ID theft 4 yrs. ago and have had 2 major surgeries since. In addition, I have 3 major painful, chronic diseases and was not granted disability. Go figure! I am not able to supplement my income because of my poor health. My apartment faces Due West without one tree to even filter the sun. Since I am housebound a lot, I obviously need my A/C on almost all the time. It would be a real hardship for my electric bill to increase, not to mention the use of even more fossil fuels!

I am originally from Massachusetts and had solar panels installed on my MA home way back in the 80s. Why can't FPL support more solar, along with wind power instead of polluting our beautiful Florida habitat? All you could do to avoid raising our rates and keeping Florida clean would be very much appreciated!

Sincerely,

gail young

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I am a native Floridian and a long-time customer of FPL. We are the Sunshine State. It is absurd that we should be having to pay this kind of money for electricity generated by fossil fuel. Florida needs to get with the program and catch up to states like South Carolina who are making great investments in alternative energy through their electric companies. This is ridiculous.

Sincerely,

Lynn Paisley

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I further believe solar panel system for private residences and businesses should be subsidized.

Sincerely,

Craig Temple
, FL 33186

9/15/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

I live in a waterfront home which experienced more than 30 day of salt water flooding in my street. Burning more fossil fuels like natural gas is nuts! We need to promote roof top solar to share the cost of renewable energy roll out which we must have if south Florida is to stay above water.

Sincerely,

John C. Van Leerr
, FL 33138

Personal Message:

I OPPOSE ANY RATE HIKE THAT CANNOT BE VERIFIED THAT IT WILL DO THE PUBLIC GOOD, IF YOU CANT VERIFY IT, THEN IT SHOULD NOT PASS AS A RATEHIKE THAT WILL ONLY COST US CUSTOMERS MORE FOR FP&L'S POCKETS TO GET BIGGER THAN WHAT THEY ALREADY ARE. THEY WON'T EVEN PAY FOR SERVICES THAT THEY OFFERED... LIKE THE ANTI-SURGE, MY HOME GOT HIT, HAD IT VERIFIED THAT A SURGE RUINED MY STOVE, AND REFRIDGERATOR. THEY DENIED PAYING FOR REPAIRS AND WOULD NOT EVEN RECEIVE MY CALLS AS TO WHY THEY DENIED IT, TO THIS DAY, I DON'T KNOW WHY, BUT THEY KEEP THEIR MONIES WE PAY THEM AND DELIVER A BUNCH OF BULL. NO TO ANY RATE HIKES NOW OR IN THE FUTURE !!!!!!!!!!!!!!!

Sincerely,

David Hazen

How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

It is long past time for Florida to move into the 21st century by converting to solar and wind, clean, renewable energy. We have a crisis of epic proportion with the continued use of fossil fuel. Oil and gas must remain in the ground. All of the science tells us that we must convert to clean, renewable energy now. Especially in Florida where sea rise has already begun to be a problem. Florida should be at the forefront in solar energy. We are the Sunshine State after all.

Sincerely,

Joan Davis
, FL 32907

9/15/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

It is time for the PSC to stop automatically approving every rate hike request that it receives. The public deserves and demands a more thorough investigation of any requested rate increases.

Sincerely,

Nancy Israelson
, FL 34275

I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Need to prove rate hikes are necessary. Since there are other methods of affordable clean energy solutions available such as solar & energy efficiency programs, don't see the necessity of increasing FPL bills. However, WE do appreciate all that FPL does for the Florida environment and our communities!

Sincerely,

Sharon Leber
, FL 34238

9/15/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Please take the \$ from the massive FPL executives' commissions and bonuses!

Sincerely,

Heidi Diana
, FL 33196

9/15/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

We can barely afford this expense at this time already and if there were alternatives we would grab them. But since they are a monopoly we have no choice. Please be fair and wait until the economy comes back!

Sincerely,

Caroline Luley
, FL 32920

9/15/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

We can't afford to pay the bill as it is with wages stagnant, food and utilities rising, gender pay gap, taxes rising on the poor only, tax breaks for the wealthy and huge corps, etc.

Sincerely,

Erica Toylar
, FL 33062

It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

You will only get more people to change to clean energy and away from FPL if you do this. I already have!

Sincerely,

Maria Cristina Beato-Lanz
, FL 33146

9/16/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. Personal Message:

I believe that "Green & Renewable Energy" should be used more & more, until we are 100% Green & Renewable as a nation, and then as a world. Any money, funds, etc. wasted on old dirty power technology is nothing but a waste. Florida could be using Wind, solar, tidal, and wave energies right now! But instead big companies and corporations throw money at politicians to kill Clean Green & Renewable energies, so they can keep Dirty petroleum based/fossil fuels/non-renewables pumping out, making them more rich, and polluting more of our planet. Please spend more on saving our planet & us by using Green & Renewable Energy sources, rather than spending more on old tech./fossil fuels & ETC. That are killing our planet, soon our way of life, and inevitably all of us.

Sincerely,

Victor Bourget
, FL 34953

9/16/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

More solar and wind power!

Sincerely,

Paul Murphy
, FL 33917

It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

Stop it. Stop it. Stop it!

Sincerely,

Dennis Dempsey
, FL 32909

9/18/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

These gas-fueled plants would not be necessary if FPL built more solar farms and did not support Amendment 1 that will inhibit private solar cooperatives.

Sincerely,

Wade Matthews
, FL 34231

Marcelle Crago
, FL 34231

9/30/2016

Dear Commissioners,

I oppose any rate hike for gas-burning power plants that are neither necessary, nor proven to be a better value than clean, low cost, low risk alternatives. I am particularly concerned that the new billion-dollar expenditures on gas plants in FPL's rate increase proposal will needlessly expose me and my fellow Floridians to more expensive electricity now and in the future, not to mention exposing us to the worst impacts of climate change.

Before adding such expensive and risky projects to rate base, FPL should have obtained a need determination from the Commission. It is through that need determination process that the Commission and stakeholders can get answers to the questions that will ultimately protect customers: For instance, do we actually need more peaking generation? How can FPL reconcile this with the cost savings it reports from reducing peak generation in recent years? Could solar energy and/or other resources have been procured at lower cost and greater value to our local economies?

The Commission should hold FPL to the same standard as everyone else when it comes to obtaining approval for large new expenditures for electric generation. FPL should be required to prove need and value first. Because FPL failed to get a need determination, this rate hike is unfair, unjust and unreasonable and should be denied.

Thank you, Commissioners, for protecting customers from unwarranted rate hikes.

Personal Message:

FPL's rate hike request for gas plants is illegal and unnecessary. There are much better unproposed options available using solar and other non-climate damaging options.

Sincerely,

Winifred Krafton
, FL 33707

Personal Message:

FPL should be working to quickly increase solar power & wind power generation of electricity!!! We have a perfect opportunity to lead the country in developing these renewal energy sources and decrease our reliance on petroleum fuels for generating our electricity! Let's become leaders in creating more jobs and less climate change! Now is the perfect time to move quickly in the right direction, to provide clean energy for our communities, our children and grandchildren and future generations of Floridians!!! Please take action now. Thank you.

Sincerely,

Sheri Safier
