Subject: golf power rate increase

To whom it may concern

My wife and I both receive Social Security which did not have any increases in years but prices are creasing up daily we had over a 12% price increase over the past 12 months which includes food utilities etc. that suggested 7% golf power increase is uncalled for since natural gas and coal and oil have dropped at the wholesale level dramatically, golf power conglomerate member of the Southern company is making plenty. I have checked their annual revenue and is astonishing the profit which they are making, at this point in time I don't see why you have to race utility cost since none of us receive any annual increases in our retirement or Social Security. It seems like every time you go shopping prices are going up. At this point in time I don't see any reason why golf power has requested a rate increase which I think is unnecessary, true infrastructure is about 100 years behind the eight ball most of Western Europe has placed there power lines underground here in the United States we are still using unsightly power poles and every time there is a little wind snow or ice we lose power and power poles have to be replaced including wires which cost millions of dollars each year. Wake up power companies stop screwing the consumer because of your shortcomings get smart and put your utilities underground.

Regards
