

Review of Electric Utility Hurricane Preparedness and Restoration Actions

Docket No : 20170215-EU

Name : Ronald McKendree

Electric Utility Provider : EI802 - Florida Power & Light Company

Zip Code : 32934

Category : Other

Comments : Here we are in the sunshine state, and we're still making it hard for commercial and personal interests to afford solar energy panels. Florida needs to be giving financial credits to individuals and businesses to install solar energy on their homes and commercial buildings. All of the energy companies in the state of Florida should be building more solar energy parks so that there are no more energy interruptions due to hurricanes. I personally was without energy for 4 and a half days, meaning the food in my refrigerator spoiled, and sleep wasn't possible for those nights. We should be making use of flat roofed businesses to install solar panels on their roofs, either giving them massive energy credits to use their facilities or providing them with free energy. Come on, let's start using some common sense and produce clean renewable energy instead of burning dirty coal and oil and polluting the ground and water by fracking.
