Florida Public Service Commission Carlotta S. Stauffer, Commission Clerk Office of the Commission Clerk 2540 Shumard Oak Boulevard Tallahassee, FL 32399-0850

Re: City of Ocala, Florida – Revised Tariff Sheets

Dear Ms. Stauffer:

This letter is submitted on behalf of the City of Ocala, Florida pursuant to Rules 25-9.05 through 25-9.071 of the Florida Administrative Code.

Electronically filed are the city's following tariff sheet in legislative and final filing formats:

- a) Eleventh Revised Sheet No. 4.0 Miscellaneous Charges;
- b) Seventh Revised Sheet No. 4.1 Miscellaneous Charges, continued;
- c) Sixth Revised Sheet No. 4.2 Miscellaneous Changes, continued;
- d) Thirteenth Revised Sheet No. 5.0 *Index of Rate Schedules*;
- e) Eighteenth Revised Sheet No. 6.0 Rate Schedule Residential Service;
- f) Third Revised Sheet No. 6.2 *Economic Development Incentive Rate*;
- g) Eighteenth Revised Sheet No. 7.0 Rate Schedule General Service Non-Demand:
- h) Twenty-first Revised Sheet No. 8.0 *Rate Schedule General Service Demand;*
- i) Twelfth Revised Sheet No. 9.1 Rate Schedule General Service Low Load Factor:
- i) Tenth Revised Sheet No. 12.1 Rate Schedule Private Area Lighting;
- k) Twelfth Revised Sheet No. 14.0 Rate Schedule Residential Service Time-of-Use;
- 1) Thirteenth Revised Sheet No. 15.0 Rate Schedule General Service Non-Demand Time-of-Use, and,
- m) Sixteenth Revised Sheet No. 16.0 Rate Schedule General Service Demand Timeof-Use.

Also included is a copy of an Electric Rate Study done for the city in August 2018 and Resolution 2018-46 detailing the rate changes. Please contact our office if there are any questions.

Very truly yours, $/_{\rm S}/$ Jody Lamar Finklea General Counsel and Chief Legal Officer

RATE SCHEDULE RS RESIDENTIAL SERVICE

AVAILABILITY:

Available throughout the entire territory served by the Ocala Utility Services.

APPLICABLE:

To full domestic residential electric service consumers in private residences, served through one residential meter and individually metered apartments for all domestic uses and to customers on prepaid service.

CHARACTER OF SERVICE:

Continuous service, AC, 60 hertz, 120/240 volt single-phase, or 120/240 or 120/208 volt, threephase at the option of the Utility. Three-phase service will be supplied only under the conditions set for in the City of Ocala's current rules and regulations for electric service.

LIMITATIONS OF SERVICE:

Additional charges for three-phase service are borne by the customer including additional cost of metering equipment. These costs are non-refundable and all equipment will remain the property of the City.

Service under the rate is subject to the Ocala Utility Services' Rules and Regulations for Electric Service.

RATE PER MONTH:

| Charge | Amount \$ 9.33 13.00 | |
|-----------------------|---|--|
| Customer | | |

OCALA UTILITY SERVICES Ocala, Florida (Continued from Sheet No. 6.1) Second Third Revised Sheet No. 6.2 Canceling First Second Revised Sheet No. 6.A12

Rate Schedule:

Application of the EDIR results in a 20 percent (20%) rate reduction in demand and usage charges as follows:

| Rate Name | GSD-EDIR | |
|-----------------|----------------------------------|--|
| Demand (kVA) | Greater than 499 | |
| Customer Charge | \$ 24.45 <u>40.00</u> | |
| Demand Charge | \$6.6072 | |
| Usage Charge: | | |
| Power Supply | \$0.0358403649 | |
| Transmission | \$0.0023700241 | |
| Distribution | \$0. 00500 00510 | |
| Subtotal Usage | \$0.0432104400 | |

Terms of Service:

Service under this EDIR shall be limited to a term of five (5) years from the commencement of service of new load at which time the EDIR rate will terminate. Accounts will be reviewed to ensure that the new load is being maintained on average. If the customer's average annual load falls below the required threshold or the customer is not maintaining the new load, the customer's participation in this EDIR may be terminated upon notification by the City effective for the billing cycle beginning after the notice.

Penalty for Non-Compliance with Qualifying Criteria or Term of Service:

Except as otherwise set forth in the customer's EIP or other agreement with City: a default under the terms and conditions of the EIP or other agreement with the City (except concerning load requirements as set forth under Terms of Service above) will result in the discontinuation of the EDIR rate and the customer will be billed at the otherwise applicable rate tariff; and the customer shall be required to repay to the City the amount of the cumulative discounts received under this EDIR with interest at the Wall Street Journal prime rate in effect on the date that the City demands repayment plus three percent (3%).

GS 03, 06

RATE SCHEDULE GS GENERAL SERVICE NON-DEMAND

AVAILABILITY:

Available throughout the entire territory served by the Ocala Utility Services.

APPLICABLE:

To all commercial consumers, including churches, schools and public meeting places, where the measured monthly kVA demand has not met or exceeded 50 kVA for more than two (2) months out of the past twelve (12) months.

CHARACTER OF SERVICE:

Continuous service, alternating current, sixty hertz, where available, may be single-phase or three-phase at standard secondary voltages at the option of the Utility.

LIMITATIONS OF SERVICE:

Energy supplied hereunder will normally be delivered through not more than one single-phase or one polyphase meter.

Where special equipment to serve the customer is required, the City may require, at its option, a specified Term Service Contract. When the customer requires the utility to furnish and install more than one point of transformation beyond the electric meter, such customer will be required to pay a monthly charge of 1.5 percent of the City of Ocala's installed cost of all facilities provided, in addition to all charges as stated herein.

Service under the rate is subject to the Ocala Utility Services' Rules and Regulations for electric service.

RATE PER MONTH:

| Charge | Amount \$ \text{\frac{12.22}{15.00}} \$0. 06568 \(\frac{06732}{06732}\) | |

RATE SCHEDULE GSD GENERAL SERVICE DEMAND RATE

AVAILABILITY:

Available throughout the entire territory served by the Ocala Utility Services.

APPLICABLE:

Applicable to non-residential utility customers who have monthly demands of 50 kVa or more for three (3) or more months out of the past twelve (12) months. The monthly kVa demand shall determine the billing rate within one of the three (3) demand categories set forth in the table below.

CHARACTER OF SERVICE:

Continuous service, alternating current, 60 hertz, single- or three-phase, and available standard voltage at the option of the Utility.

LIMITATIONS OF SERVICE:

Power supplied hereunder will normally be delivered through not more than one meter.

Where special equipment to serve the customer is required, the city may require, at its option, a specified Term Service Contract. When the customer requires the Utility to furnish and install more than one point of transformation beyond the electric meter or any other special facilities for the exclusive use of the customer, such customer shall be required to pay a monthly charge of one and one-half percent (1-1/2%) of the City of Ocala's installed cost of all facilities provided, in addition to all charges as stated herein.

Service under the rate is subject to the Ocala Utility Services' Rules and Regulations for electric service.

RATE PER MONTH:

| Rate Name | GSD-1 | GSD-2 | GSD-3 |

GSLLF RATE SCHEDULE GSLLF GENERAL SERVICE LOW LOAD FACTOR RATE

| Charge | Amount \$24.0840.00 | |
|-----------------------|-------------------------------|--|
| Customer | | |
| Power Supply | \$0.10885 | |
| Transmission | \$0.00280 | |
| Distribution | \$0.01682 | |
| Subtotal Usage Charge | \$0.12847 | |

MINIMUM BILL:

The minimum bill per month shall be the customer charge plus other applicable charges, if any, covered by Ordinance, State Statutes or Federal Law.

DETERMINATION OF DEMAND:

Demand in kVA shall be established for record purposes and shall be taken each month as the highest 15-minute demand in kVA as registered on an integrating meter, or at the Utility's option, as the highest registration of a kW demand meter divided by a 90 percent (90%) lagging power factor, and adjusted to the nearest kVA.

BILLING ADJUSTMENTS:

The rate set forth in this tariff is based upon the delivery and measurement of the transformed energy. When the measurement of energy is made at the primary voltage of the distribution line used to supply the customer, the energy, as billed, will be the metered energy multiplied by 0.975.

The rate set forth herein may be increased by the monthly charge as set forth under LIMITATIONS OF SERVICE or the FACILITIES CHARGE as set forth under SPECIAL CONDITIONS.

In addition to the above:

RS 1, 16

RATE SCHEDULE RS RESIDENTIAL SERVICE

AVAILABILITY:

Available throughout the entire territory served by the Ocala Utility Services.

APPLICABLE:

To full domestic residential electric service consumers in private residences, served through one residential meter and individually metered apartments for all domestic uses and to customers on prepaid service.

CHARACTER OF SERVICE:

Continuous service, AC, 60 hertz, 120/240 volt single-phase, or 120/240 or 120/208 volt, three-phase at the option of the Utility. Three-phase service will be supplied only under the conditions set for in the City of Ocala's current rules and regulations for electric service.

LIMITATIONS OF SERVICE:

Additional charges for three-phase service are borne by the customer including additional cost of metering equipment. These costs are non-refundable and all equipment will remain the property of the City.

Service under the rate is subject to the Ocala Utility Services' Rules and Regulations for Electric Service.

RATE PER MONTH:

| Charge | Amount | |
|-----------------------|-----------|--|
| Customer | \$13.00 | |
| Power Supply | \$0.06553 | |
| Transmission | \$0.00535 | |
| Distribution | \$0.01432 | |
| Subtotal Usage Charge | \$0.08520 | |

MINIMUM CHARGE:

The minimum monthly bill shall be the customer charge plus other applicable charges, if any, covered by Ordinance, State Statutes or Federal Law.

BILLING ADJUSTMENTS:

Power Cost Adjustment:

Issued by: Michael Poucher

OCALA UTILITY SERVICES Ocala, Florida (Continued from Sheet No. 6.1) Third Revised Sheet No. 6.2 Canceling Second Revised Sheet No. 6.2

Rate Schedule:

Application of the EDIR results in a 20 percent (20%) rate reduction in demand and usage charges as follows:

| Rate Name | GSD-EDIR |
|-----------------|------------------|
| Demand (kVA) | Greater than 499 |
| Customer Charge | \$40.00 |
| Demand Charge | \$6.72 |
| Usage Charge: | |
| Power Supply | \$0.03649 |
| Transmission | \$0.00241 |
| Distribution | \$0.00510 |
| Subtotal Usage | \$0.04400 |

Terms of Service:

Service under this EDIR shall be limited to a term of five (5) years from the commencement of service of new load at which time the EDIR rate will terminate. Accounts will be reviewed to ensure that the new load is being maintained on average. If the customer's average annual load falls below the required threshold or the customer is not maintaining the new load, the customer's participation in this EDIR may be terminated upon notification by the City effective for the billing cycle beginning after the notice.

Penalty for Non-Compliance with Qualifying Criteria or Term of Service:

Except as otherwise set forth in the customer's EIP or other agreement with City: a default under the terms and conditions of the EIP or other agreement with the City (except concerning load requirements as set forth under Terms of Service above) will result in the discontinuation of the EDIR rate and the customer will be billed at the otherwise applicable rate tariff; and the customer shall be required to repay to the City the amount of the cumulative discounts received under this EDIR with interest at the Wall Street Journal prime rate in effect on the date that the City demands repayment plus three percent (3%).

GS 03, 06

RATE SCHEDULE GS GENERAL SERVICE NON-DEMAND

AVAILABILITY:

Available throughout the entire territory served by the Ocala Utility Services.

APPLICABLE:

To all commercial consumers, including churches, schools and public meeting places, where the measured monthly kVA demand has not met or exceeded 50 kVA for more than two (2) months out of the past twelve (12) months.

CHARACTER OF SERVICE:

Continuous service, alternating current, sixty hertz, where available, may be single-phase or three-phase at standard secondary voltages at the option of the Utility.

LIMITATIONS OF SERVICE:

Energy supplied hereunder will normally be delivered through not more than one single-phase or one polyphase meter.

Where special equipment to serve the customer is required, the City may require, at its option, a specified Term Service Contract. When the customer requires the utility to furnish and install more than one point of transformation beyond the electric meter, such customer will be required to pay a monthly charge of 1.5 percent of the City of Ocala's installed cost of all facilities provided, in addition to all charges as stated herein.

Service under the rate is subject to the Ocala Utility Services' Rules and Regulations for electric service.

RATE PER MONTH:

| Charge | Amount |
|-----------------------|-----------|
| Customer | \$15.00 |
| Power Supply | \$0.06732 |
| Transmission | \$0.00511 |
| Distribution | \$0.01380 |
| Subtotal Usage Charge | \$0.08623 |

MINIMUM CHARGE:

The minimum monthly bill shall be the customer charge plus other applicable charges, if any, covered by Ordinance, State Statutes or Federal Law.

GSD 05, 05M, 06

RATE SCHEDULE GSD GENERAL SERVICE DEMAND RATE

AVAILABILITY:

Available throughout the entire territory served by the Ocala Utility Services.

APPLICABLE:

Applicable to non-residential utility customers who have monthly demands of 50 kVa or more for three (3) or more months out of the past twelve (12) months. The monthly kVa demand shall determine the billing rate within one of the three (3) demand categories set forth in the table below.

CHARACTER OF SERVICE:

Continuous service, alternating current, 60 hertz, single- or three-phase, and available standard voltage at the option of the Utility.

LIMITATIONS OF SERVICE:

Power supplied hereunder will normally be delivered through not more than one meter.

Where special equipment to serve the customer is required, the city may require, at its option, a specified Term Service Contract. When the customer requires the Utility to furnish and install more than one point of transformation beyond the electric meter or any other special facilities for the exclusive use of the customer, such customer shall be required to pay a monthly charge of one and one-half percent (1-1/2%) of the City of Ocala's installed cost of all facilities provided, in addition to all charges as stated herein.

Service under the rate is subject to the Ocala Utility Services' Rules and Regulations for electric service.

RATE PER MONTH:

| Rate Name | GSD-1 | GSD-2 | GSD-3 |
|-----------------------|-------------------|-------------|----------------------|
| Demand (kVA) | Less than 150 kVA | 150-499 kVA | Greater than 499 kVA |
| Customer Charge | \$40.00 | \$40.00 | \$40.00 |
| Demand Charge | \$6.77 | \$7.43 | \$8.40 |
| Power Supply Charge | \$0.04534 | \$0.04736 | \$0.04561 |
| Transmission Charge | \$0.00275 | \$0.00265 | \$0.00301 |
| Distribution Charge | \$0.00893 | \$0.00600 | \$0.00636 |
| Subtotal Usage Charge | \$0.05702 | \$0.05601 | \$0.05498 |

(Continued from Sheet No. 9.0)

GSLLF RATE SCHEDULE GSLLF GENERAL SERVICE LOW LOAD FACTOR RATE

| Charge | Amount | |
|-----------------------|-----------|--|
| Customer | \$40.00 | |
| Power Supply | \$0.10885 | |
| Transmission | \$0.00280 | |
| Distribution | \$0.01682 | |
| Subtotal Usage Charge | \$0.12847 | |

MINIMUM BILL:

The minimum bill per month shall be the customer charge plus other applicable charges, if any, covered by Ordinance, State Statutes or Federal Law.

DETERMINATION OF DEMAND:

Demand in kVA shall be established for record purposes and shall be taken each month as the highest 15-minute demand in kVA as registered on an integrating meter, or at the Utility's option, as the highest registration of a kW demand meter divided by a 90 percent (90%) lagging power factor, and adjusted to the nearest kVA.

BILLING ADJUSTMENTS:

The rate set forth in this tariff is based upon the delivery and measurement of the transformed energy. When the measurement of energy is made at the primary voltage of the distribution line used to supply the customer, the energy, as billed, will be the metered energy multiplied by 0.975.

The rate set forth herein may be increased by the monthly charge as set forth under LIMITATIONS OF SERVICE or the FACILITIES CHARGE as set forth under SPECIAL CONDITIONS.

RESOLUTION 2018-46

A RESOLUTION ADOPTING A NEW ELECTRIC UTILITY FEE SCHEDULE REPLACING THE EXISTING RATE SCHEDULE A PREVIOUSLY ADOPTED BY RESOLUTION NO. 2018-20 ON APRIL 17, 2018.

WHEREAS, a rate schedule for electric utility rates prior to August 21, 2007 was included in the City of Ocala, Florida Code of Ordinances Section 70-641; and

WHEREAS, Section 70-641 was amended on August 21, 2007 to provide for periodic changes to the rate schedule by adoption of resolutions by city council where the revised rate schedule would be set forth as Schedule A To Section 70-641 of the Code of Ordinances; and

WHEREAS, the rate Schedule A for electric utility rates is being amended herein to fund Electric operations, capital improvements and reserves; and

WHEREAS, the attached Schedule A sets forth the electric utility rates effective October 1, 2018, October 1, 2019 and October 1, 2020.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF OCALA, FLORIDA, that Schedule A To Ordinance 70-641 adopted August 21, 2007 is hereby replaced by the attached revised Schedule A as the new Electric Utility Rate Schedule effective October 1, 2018.

This resolution adopted this ______ day of September_____, 2018.

Section 1 INTRODUCTION, PURPOSE, AND SCOPE

Introduction

Ocala Utility Services (OUS) is located in Ocala, Florida and is a municipal utility owned by the City of Ocala (the City). In October 2008, Ocala Electric Utility was teamed with the City of Ocala's Water and Sewer Department to become OUS. Combining the City's utility services into one complete department allows the City to achieve the main goal of providing public services at a reasonable cost and with greater efficiency. OUS provides electricity, water and sewer services to approximately 65,000 customers inside the City limits and in the surrounding area.

Leidos Engineering, LLC, (the Consultant or the firm) conducted this study, which relied upon historical and projected data for the development of operating revenues, operating expenses, and capital requirements. Historical data was obtained from various monthly reports, annual financial reports, actual billing records, analyses, and discussions with members of the management and staff of the City. Projected data was, in part, derived from historical data adjusted for current economic conditions, the Operating Budgets for Fiscal Years ending September 30, 2017 and 2018 and the Capital Improvement Plan for Fiscal Years 2018 through 2022 (collectively, the Budgets), the City's demand and energy forecasts (including the effects of conservation), the various contracts, and the direction and instructions provided by the City, and other appropriate sources.

Purpose

The primary purposes of the Electric Rate Study are:

- 1. To determine the estimated annual revenue requirements for the Fiscal Year ending September 30, 2018, as adjusted for known changes (the Test Year); and Fiscal Years ending September 30, 2019 through 2022 (Study Period).
- 2. To test the adequacy of the existing rates on a system wide basis for the Fiscal Years 2018 through 2022;
- 3. To prepare a cost of service analysis to estimate the cost of providing electric service by customer class;
- 4. To adjust rate levels, if necessary, in order to recover the cost of providing service, and to reflect the policies established by the City; and
- 5. To continue to recover periodically the costs of purchased power.

Scope

The overall scope of services of the Electric Rate Study provided for (i) the development of a revenue requirements study for the Test Year and Study Period; (ii) the development of proposed rate levels and rate structures that are designed to recover the revenue requirements for the Test Year and Study Period which reflect the City's policy and industry practices; and (iii) the development of comparisons of typical bills for electric service calculated using the existing and proposed rates and the rates charged by neighboring private and public electric utilities.

The Electric Rate Study consists of two parts or phases. The results are presented in this report. Working closely with management and staff, Phase I activities included, among other things, (i) obtaining and reviewing historical billing data, (ii) reconciling such data, (iii) identifying the proper sales forecast to use for purposes of projecting rate revenues and costs (iv) projecting billing determinants in order to calculate the effect on revenues based on revised rates, (v) preparing projections of revenues by major customer class, (vi) developing projected annual revenue requirements for the Test Year and Study Period, (vii) preparing a comparison of the City's existing rates and the rates of other utilities, and (viii) preparing a Phase I report.

Phase II includes (i) the making of revisions to the revenue requirements, (ii) the affirmation of City policies and direction, (iii) the allocation of costs, (iv) the design of proposed rates, and (v) the preparation of a final report.

Section 2 ENERGY REQUIREMENTS AND CUSTOMER STATISTICS

General

The development of an accurate forecast of future power and energy requirements, sales, customers, and customer usage characteristics, is essential in the evaluation of the adequacy of electric rates and rate structures. This section summarizes the various factors considered and utilized in the development of the City's near term future power and energy requirements.

The estimates of energy and demand requirements developed for inclusion in this study were based on historical sales, customers, and customer usage characteristics.

Energy Requirements

Projection of Electricity Sales to Ultimate Customers

The projections of electric energy sales to ultimate customers are based on an analysis of historical information for the fiscal years ended September 30, 2014, 2015, 2016 and through April of fiscal year 2017. Historical growth, usage patterns, and normalized weather were tested for reasonableness. Based on information provided by the City, it was projected that the reported number of customers and kWh sales would increase by 0.5% annually beginning in May 2017 and for the projected fiscal year 2018, and Study Period.

Projected Demand

The historical system peak demand for the fiscal year ending September 30, 2016 was 295,284 kW, occurring in July. For purposes of this Study, it was projected that the system peak demand would increase at an annual rate of 0.5%

Projected Energy Sales

The monthly system historical and projected energy sales are set forth in Table No. 2-1, pages 3 and 4. The following tabulation is an annual summary of the historical and projected energy sales by major customer class:

Retail Energy Sales (Mwh) Fiscal Years Ending September 30,

| | | Projected | | | |
|------------------------|-----------|-----------|-----------|-----------|-----------|
| Customer Class | FY 2014 | FY 2015 | FY 2016 | FY 2017 * | FY 2018 |
| Residential | 490,704 | 510,914 | 532,510 | 518,275 | 520,867 |
| General Service | 165,247 | 169,061 | 167,558 | 162,499 | 163,312 |
| General Service Demand | 523,835 | 528,839 | 562,681 | 569,486 | 572,335 |
| Municipal | 23,595 | 23,894 | 24,924 | 25,382 | 25,509 |
| Private Area Lighting | 5,418 | 5,490 | 5,669 | 5,733 | 5,762 |
| Street Lights | 6,300 | 6,660 | 6,361 | 6,045 | 6,075 |
| TOTAL ENERGY SALES | 1,215,099 | 1,244,858 | 1,299,703 | 1,287,421 | 1,293,860 |
| Percent Change (%) | 1.5% | 2.4% | 4.4% | -0.9% | 0.5% |

^{*} Fiscal Year 2017 includes actual data through April and projected growth of 0.5% thereafter.

As can be seen from the summary table, energy sales in fiscal years ended September 30, 2015 and 2016 rose by 2.4 percent and 4.4 percent respectively. Sales in 2017 are expected to decrease by 0.9% based on actual data through April, which includes decreased sales due to mild winter weather. Sales in Fiscal Year 2018 and the Study Period are based on 2017 amounts with a projected annual growth rate of 0.5%.

Projected Average Number of Customers

An integral part of the forecasting process is the average number of customers the City expects to serve by major customer class. The detailed historical and projected customers are set forth on Table No. 2-1, pages 1 and 2. The following is a summary of the historical and projected average number of customers used as a basis for this study:

Average Number of Customers Fiscal Years Ending September 30,

| | | | Projected | | |
|------------------------|---------|---------|-----------|-----------|---------|
| Customer Class | FY 2014 | FY 2015 | FY 2016 | FY 2017 * | FY 2018 |
| Residential | 40,202 | 40,906 | 41,183 | 41,492 | 41,700 |
| General Service | 7,300 | 7,365 | 7,410 | 7,441 | 7,478 |
| General Service Demand | 967 | 990 | 1,017 | 1,042 | 1,047 |
| Municipal | 363 | 362 | 365 | 365 | 367 |
| Private Area Lighting | 6,740 | 6,832 | 6,954 | 7,004 | 7,039 |
| Street Lights | 8,810 | 8,852 | 8,927 | 9,042 | 9,087 |
| TOTAL AVG. CUSTOMERS | 64,383 | 65,307 | 65,856 | 66,386 | 66,718 |
| Percent Change (%) | - | 1.4% | 0.8% | 0.8% | 0.5% |

^{*} Fiscal Year 2017 includes actual data through April and projected growth of 0.5% thereafter.

Purchased Power

The City purchases all of its capacity and energy requirements from the Florida Municipal Power Agency (FMPA).

Energy Losses

The loss factors utilized in developing the projected energy requirements for the Test Year are 3.6 percent of annual energy requirements and 3.7 percent of energy sales. This factor is used to take into account transmission and distribution losses and unaccounted for energy and demand.

Summary of Projected Demand and Energy Requirements

The following tabulation sets forth the projected annual peak demand at the generation level, energy requirements and the system load factor used in this study:

| Description | 2018 Test Year |
|---|-------------------|
| Annual 60-Minute Peak Demand (MW) | 298 |
| Annual Energy Sales (GWh) | 1,294 |
| Losses and Unaccounted for Energy (GWh) | <u>48</u> |
| Annual Energy Requirements (GWh) | <u>1,342</u> |
| Annual System Load Factor (%) | <u>51</u> % |

Customer Statistics

Projected customer statistics by major rate classification are set forth on Table No. 2-1 and No. 2-2. Table No. 2-1 sets forth for fiscal years ending September 30, 2014 through 2018 the historical and projected number of customers and energy sales. Table No. 2-2 sets forth the projected annual billing determinants by major rate classes for fiscal year 2018. The projected average annual number of customers and annual energy sales for the fiscal year ending September 30, 2018 incorporate the following considerations:

- i. continuation of recent historical sales and/or usage characteristics;
- ii. continuation of past, present, and projected conservation and demand-side management programs; and
- iii. continuation of the existing regulatory structure.

Any departure from those assumptions (e.g., change in economic activity) could have a material adverse effect on energy sales and revenues.

As derived from Table No. 2-1 and No. 2-2, the projected fiscal year 2018 composition of the City's ultimate customers and associated energy sales by major rate classification is tabulated below:

Test Year 2018

| | Average | | Annual | |
|------------------------|-----------|----------|------------|----------|
| | Number of | Percent | Megawatt- | Percent |
| Customer Class | Customers | of Total | Hour Sales | of Total |
| Residential | 41,700 | 62.5% | 520,867 | 40.3% |
| General Service | 7,478 | 11.2% | 163,312 | 12.6% |
| General Service Demand | 1,047 | 1.6% | 572,335 | 44.2% |
| Municipal | 367 | 0.6% | 25,509 | 2.0% |
| Private Area Lighting | 7,039 | 10.6% | 5,762 | 0.4% |
| Street Lights | 9,087 | 13.6% | 6,075 | 0.5% |
| Total Customers | | | | |
| and MWh Sales | 66,718 | 100.0% | 1,293,860 | 100.0% |

General

The various components of costs associated with the operation, maintenance, funding of improvements, renewal and replacement of facilities, and assurance of the adequacy and continuity of reliable service to customers are generally referred to as the revenue requirements of a municipally owned and operated utility. The determination of the revenue requirements as they relate to the City, consistent with the methods of other publicly owned utilities, includes the various generalized cost components described below.

Operation and Maintenance Expenses: These expenses include the cost of purchased power, labor, materials, supplies, transportation, services, and other expenses, which are necessary to the operation and maintenance of the Electric Utility. These expenses do not include an allowance for depreciation or replacement of capital assets, any monies for the payment of interest on indebtedness or any monies transferred to a Reserve Fund.

Debt Service: Included in the debt service component of cost is the annual principal of and interest on bonds and related costs/transfers payable from the net revenues.

Capital Improvements: These expenditures are for the purpose of paying the cost of construction or acquisition of necessary improvements, betterments, extensions, enlargements or additions to, or the renewal and replacement of capital assets of the system and for unusual or extraordinary repairs thereto.

Revenues Available for Other Lawful Purposes: This component of cost is paid out of revenues and includes (a) any additional capital improvements to be financed from revenues; (b) additional working cash to provide for the payment of expenses incurred in providing service prior to the receipt of revenues associated with such service; (c) the establishment of operating reserves for special purposes such as providing funds for self-insuring the facilities against certain perils and for the stabilization of rates to smooth out rate increases and minimize customer rate shock, (d) transfers of certain amounts of revenues from the earnings of the Electric Utility to the City; and (e) allowances for any other lawful purpose.

Revenue Credits: In the determination of projected annual costs, adjustments should be made to reflect among other things, (a) the receipt of revenues from the investment of monies, and (b) the receipt of revenues from other operating sources such as the rental of land, the use of poles and the sale of scrap. The recognition of these revenue credits reduces the overall annual revenue requirement from electric rates to ultimate customers.

Total Annual Net Revenue Requirements: The total of the cost components described above less other income and other operating revenues is the total annual net revenue

requirements and such total represents the amount of revenues required to be recovered through rates and charges to ultimate customers.

Projected Revenue Requirements

Electric rates should be set at a level such that the revenues produced will be sufficient to meet near future revenue requirements. An important objective of a projected test year is to establish rates and rate levels that will also reflect the then current and near future costs of providing service and market conditions. Thus, it is necessary to estimate or project the various cost components over a reasonable period of time in order to determine the required rate levels. Projections must consider changes in operating practices, new facilities, increased regulatory (environmental) costs, expected changes in cost, and other factors that may affect the overall cost of operating and maintaining the utility system.

It was determined that the revenue requirements for this Electric Rate Study would be predicated on the adopted budgeted costs of the Electric Utility for the fiscal years ending September 30, 2017 and 2018. The budgeted expenditures were used as a baseline in the development of the projections of the annual revenue requirements for the fiscal period ending September 30, 2017 through 2022. Based upon that detailed data and certain adjustments to reflect any known and anticipated changes and certain pro forma adjustments, the Consultant, together with members of the management and staff of the City, developed detailed estimates of projected expenditures for the period 2017 through 2022.

Assumptions and Considerations

The development of the projected revenue requirements for the Test Year required certain assumptions and considerations in order to reflect certain known or anticipated changes and certain pro forma adjustments. The analyses, estimates and projections summarized herein have been based upon an understanding of certain contracts, agreements, regulations, statutory requirements and planned operations. In the preparation of this report, certain assumptions have been made with respect to conditions, which may occur in the future. While these assumptions are reasonable for the preparation of this study, they are dependent upon future events and actual conditions may differ from those assumed. To the extent that actual future conditions differ from those assumed herein or provided to us by others, the actual results will vary from those projected.

The major assumptions and considerations included in the development of the projected annual revenue requirements have been divided into two categories and are listed below:

General

1. The general economic activity experienced in recent years will continue at current levels and annual inflation will remain at existing levels of approximately 2.3 percent.

- 2. Existing federal and state environmental laws, including the Clean Air Act Amendments of 1990, the Clean Air Interstate Rule and the Clean Air Mercury Rule, will continue to be implemented, applied and enforced, and no new laws, regulations, rules and interpretations will be imposed on FMPA or the City resulting in more stringent environmental restrictions in the near term.
- 3. There will be no material change in the taxation of fuel used to produce electricity.
- 4. There will be no material change in the taxation of municipally-owned or municipally financed electric generation or purchased power, transmission and distribution systems.
- 5. There will be no material change in the level of federal, state or local regulation of municipally-owned utilities.
- 6. There will be no material change in the City's existing ability to import or export power over the transmission grid.
- 7. The existing form of governance and policies established by the City will continue throughout the study period.
- 8. The City will continue to be the exclusive owner and operator of the Electric Utility, including its transmission, distribution, and customer care facilities.

Specific

- 1. The fiscal year period ending September 30, 2017 through 2022 revenues and expenses for the Electric Utility and the underlying assumptions included therein provide a reasonable basis and reflect normalized system operation.
- 2. As discussed in Section 2, the sales forecast was the basis for the development of the projected retail energy and demand requirements for the Test Year. It should be recognized that (a) any meaningful variances in the load characteristics of existing or new customers, and/or (b) any differences in expected initiation of service for anticipated new customers, and/or (c) differences in the expected effectiveness of the various conservation programs initiated and contemplated by the City and/or (d) any changes in federal or state legislation that permit customers to select their energy service provider may result in a distortion and/or an over or under recovery of revenue requirements for the Test Year.
- 3. Power supply costs used herein are predicated in part on cost data provided by FMPA and on the continued purchase of power supply from FMPA.
- 4. Expenses for the fiscal years 2019 through 2022 have been increased based on an assumed inflation rate of 2.3 percent per year except where noted in Table No. 3-1.
- 5. Projected purchased power expenses have been estimated based on an analysis of purchased power expenses assuming an overall increase in kWh usage from 2017 of 0.5% percent per year.

- 6. Bad debt expense has been escalated at the inflation rate of 2.3 percent per year.
- 7. No new debt service has been assumed for the near term.
- 8. No new payments to the Rate Stabilization Fund have been assumed.
- 9. Capital improvement expenditures have been estimated each year, based on a review of the City's Capital Improvement Plan.
- 10. The amount for the Transfer to the General Fund has been based current City policies.
- 11. Other Revenue has been projected based on the adopted fiscal year ending September 30, 2017 and 2018 Budgets and is set forth in Table No. 3-3.
- 12. Projected revenues from existing rates have been estimated based on the projected increases in sales from 2017 levels of 0.5 percent per year.

Shown on Table No. 3-1 are the various expenditures and revenues for the fiscal years ending September 30, 2017 through 2022, and the adjustments discussed herein. In addition, each of the adjustments is noted in the footnotes to Table No. 3-1.

Summary

Based on the projected Test Year revenue requirements developed on Table No. 3-1, the existing rates produce revenues that are less than the cost of providing service on a system wide basis. The projected deficiencies are summarized below.

| | Projected | | | | | | | | | |
|-----------------------------------|----------------|----------------|----------------|----------------|----------------|--|--|--|--|--|
| Description | FY 2018 | FY 2019 | FY 2020 | FY 2021 | FY 2022 | | | | | |
| Net Revenue Requirements | \$164,394,459 | \$163,478,364 | \$167,394,503 | \$171,320,429 | \$175,241,127 | | | | | |
| Total Existing Rate Revenue | 153,430,635 | 151,950,570 | 155,208,146 | 158,552,879 | 161,985,893 | | | | | |
| Deficiency | (\$10,963,824) | (\$11,527,795) | (\$12,186,357) | (\$12,767,550) | (\$13,255,234) | | | | | |
| Percent of Existing Rates Revenue | -7.6% | -8.0% | -8.3% | -8.5% | -8.6% | | | | | |

Electric Rate Study

Summary of Projected Revenue Requirements and Existing Rate Revenues

Footnotes to Table No. 3-1

- [1] Based on 2017 and 2018 Adopted Budgets and proposed 2019 Budget.
- [2] Unless otherwise noted, operating expenses are based on the 2017 and 2018 Adopted Budgets, escalated in 2019 through 2022 by the assumed general inflation rate of 2.3% per year.
- [3] Based on the Power Costs shown on Table No. 3-4, consistent with the PCA adjustment factor of \$0.02368 per kWh and total sales of approximately 1,293,860,000 kWh.
- [4] Assumes 0.5% growth in sales and 2.3% inflation rate for purchased power.
- [5] Based on information provided by the City. Assumes no new debt service.
- [6] Excludes outside City surcharges. Assumes \$17,587,695 in the Test Year.
- [7] Amount of Capital Improvements funded from operating revenues. See Table No. 3-5, Line 23.
- [8] Based on currently effective rates. Assumes sales of approximately 1,287,419,000 kWh in 2017 and 0.5% growth in sales in 2018 through 2022.
- [9] From Table 3-2, Page 3.
- [10] Assumes 0.5% growth in sales and 2.3% inflation rate for purchased power, to be recovered in the PCA.

^[1] Amounts shown are projected by the City and reflect estimated direct construction costs and exclude the estimated costs of financing (i.e. interest during construction and reserves, etc.) Estimated direct construction costs include an allowance for certain expenditures included in the operating budget which are customarily capitalized such as capitalized labor costs, capitalized overhead / administrative costs and capitalized equipment costs.

^[2] On April 17, 2018 the City Council approved the transfer of \$7,000,000 from the Electric Rate Stabilization Reserve to support the capital improvement program.

^[3] Assumes no future debt borrowing.

^[4] Balance to be funded from Operating Revenues.

Section 4 FUNCTIONALIZATION AND CLASSIFICATION OF COSTS AND DEVELOPMENT OF ALLOCATION FACTORS

Functionalization and Classification

In allocating utility costs to the various customer classes, there are three major processes: functionalization, classification, and allocation. The functionalization and classification of the Test Year revenue requirement are discussed in the first part of this section. The development of allocation factors for the Test Year revenue requirement is discussed and set forth in the second half of this section.

Functionalization of Test Year Expenditures

Although budgeting and accounting systems generally follow functional groups, i.e., production, transmission, etc., certain costs such as those associated with administrative and general expenses and bond service generally are not assigned by accounting and budgetary convention to a major function. A cost-of-service (COS) study usually requires the rearrangement of certain expenditures into functional groups (i) to be more representative of the expenditure causation, (ii) to combine costs that have been incurred for a similar purpose, and (iii) to facilitate the allocation of cost responsibility. Thus, the functionalization of certain costs is merely a ratemaking mechanism to apportion such costs to the common utility function.

The typical functions of the Test Year Revenue Requirements are developed in the COS model and summarized below.

| Function and Description | Test Year <u>Amount</u> |
|--|----------------------------|
| Production. Those costs associated with generating or purchasing power and delivering that power to the utility's bulk transmission system | \$120,965,556 |
| <i>Transmission and Distribution.</i> Those costs incurred in connection with the delivery of power over the bulk transmission system through the primary and secondary distribution system to the utility's consumers | \$26,439,307 |
| Customer. Those costs that are related to the number, type and size of customers | \$8,504,002 |
| Total | \$155,908,86599 |

An analysis of the Test Year revenue requirements was made to estimate the functionalized Test Year revenue requirements.

Classification of Various Costs

Historically, electric utility costs or the components of the annual revenue requirement have generally been classified as (1) demand-related, (2) variable or energy-related, and

(3) customer-related. Thus, if a cost or expense is fixed or does not vary directly with the level of kWh purchased or sold, the cost was assumed to be generally related to the demands or load of the customers and was allocated to the various customer classes on the basis of demand or load relationships. Debt service is one example of an expenditure generally classified as demand-related. If a cost or expense was viewed to vary with the amount of kWh the electric utility sold, the cost or expense was usually classified as energy-related and allocated to the various customer classes on the basis of kWh relationships. Purchased energy costs are a primary example of expenses classified as variable or energy-related and allocated on the basis of kWh sales. If the cost is directly related to the number of customers which are being served, these costs would generally be classified as such and allocated to the customer classes based on the customer relationship among the customer classes. An example of customer-related costs is meter reading expenses.

Until such time that the development of more detailed data with regard to hourly usage characteristics and costs is economically justified or legally required, the classification of costs described below reflects usual regulatory practice as well as a reasonable and equitable approach.

Demand (Fixed) Costs: Are defined as those costs incurred to maintain in readiness-to-serve an electric system capable of meeting the total combined demands of all classes of customers. Demand costs are those costs that are generally fixed in the short-run, that do not materially vary directly with the number of kWh generated or sold, and that are not defined as customer costs. Demand costs will include that portion of operation and maintenance expenses; debt service; renewals, replacements and improvements; and other costs which are not designated as specifically customer or variable energy costs.

Customer Costs: Are defined as those costs directly related to the number, type and size of customers, such as customer accounting and collecting, and costs of meters and services.

Energy (Variable) Costs: Are defined as those costs that vary substantially or directly with the amount of energy sold or generated and purchased, including such items as fuel and a portion of operation and maintenance expense for production facilities.

Development of Allocation Factors

General

This section discusses the development of the factors utilized to allocate the capacity related, energy related, customer related, and other costs to the various customer classes. The aforementioned costs are allocated to the customer classes according to their respective customer class, and the particular cost allocation factor developed for each class and for each type of cost. The customer classes include Residential, General Service, General Service Demand, General Service Demand Low Load Factor, Municipal, and Lighting.

Demand Allocation Factors

"Demand Allocation" refers to the basis on which capacity and other demand related costs are distributed or assigned (allocated) among the various customer classes for the purpose of determining the revenues required from each class to recover such costs. The demand allocation factors, as developed and used herein, reflect the cost responsibility for each of the various customer classes in relation to the capacity or demand related costs to be allocated. The demand allocation factors were used to apportion the following capacity or demand related costs among the various customer classes.

- Purchased power expenses (fixed capacity costs only);
- Transmission and distribution expenses;
- Debt service requirements;
- Allowances for renewal and replacements, and reserves; and
- Payments to the City.

The demand allocation factors were developed based on historical demand and energy relationships filed with the Public Service Commission by the investor —owned utilities in Florida for 2017 and an analysis of the City's billing demands. Duke Energy Florida. The demand allocation factors are based on the estimated annual coincident and non-coincident peak demands. Table No. 4-2 summarizes the demand allocation factors.

Energy Allocation Factors

Energy allocation factors are the basis for apportioning those costs or expenses classified as variable or energy related and assumed to vary directly with the level of kWh sales or generation. The costs classified herein as variable or energy related are fuel, purchased power, and the variable portion of other production expenses.

The projected fiscal year energy sales data are discussed in Section 2. The resulting energy allocation factors are shown on Table No. 4-3.

Customer Allocation Factors

Customer costs are defined herein as those costs related to the number of customers and the size of service required. Included in the customer related costs are the costs associated with meter reading, meter maintenance, customer installations, billing, collecting, and other customer related accounting, service, and information functions. The customer allocation factors were based on the projected average number of customers in each customer classification during the Test Year.

In apportioning customer related costs and revenues to the various customer classifications, customer allocation factors were utilized that recognized weighted and unweighted customers and fixtures. The customer weighting factors were based on Duke Energy customer charges. The customer allocation factors are shown on Table No. 4-4.

Other Allocation Factors

Certain elements of the annual revenue requirement are related to revenues. Miscellaneous other allocation factors including the revenue allocation factors are included in the COS model.

^[1] Based on Duke Energy Florida customer charges.

^[2] Weighted customers are equal to Column (b), Unweighted Customers multiplied times Column (d), the Weighting Factor.

Section 5 ALLOCATED COST OF SERVICE

General

As one of the factors considered in the development of the proposed rate levels and rate structures included herein, certain analyses common in ratemaking have been employed which provide a reasonable indication of the revenue levels required to recover the full cost of service or revenue requirement of each customer class. Since it is not the practice in utility accounting to maintain a subdivision of accounts that will report the cost of rendering service to each customer class, an allocation of costs must be made on the basis of parameters predicated upon the available classifications of operating expense and utility plant.

Present and Proposed Rate Classifications

The present customer classifications are as follows:

- Residential
- General Service Non Demand
- General Service Demand
- General Service Demand Low Load Factor
- Municipal
- Lighting

Allocation and Assignment of the Cost of Service

The allocated cost of service was developed, along with the target rate increase for each class, based on a comparison of existing rate revenues.

The projected Test Year revenues under the existing rates and charges, the revenue increase, and the percentage increase necessary to recover the projected cost of service for each of the major rate classifications, as summarized from the COS model are as follows:

Test Year 2018

| | Total Existing | | |
|----------------------------|----------------|-----------|---------|
| | Rate Revenue | Target In | creases |
| Customer Class | (\$000) | (\$000) | (%) |
| Residential | \$61,011 | \$6,558 | +10.7% |
| General Service Non-Demand | 18,731 | \$1,734 | +9.3% |
| General Service Demand | 59,388 | \$2,808 | +4.7% |
| General Service Demand | | | |
| Low Load Factor | 191 | \$11 | +5.9% |
| Municipal | 3,229 | \$277 | +8.6% |
| Lighting | 1,831 | \$140 | +7.6% |
| Total System | \$144,381 | \$11,528 | +8.0% |

Table No. 5-1 summarizes the results of the allocated COS study. Table No. 5-2 shows the results of the functionalization and classification of the Test Year revenue requirements and Table No. 5-3 summarizes the indicated revenue increases by customer class.

|----------|--|-----------------|----------------------|----------------|-------------------|
| | (a) | (b) | (c) | (d) | (e) |
| | | | | | |
| 1 | Residential | \$67,569,378 | \$61,011,277 | (\$6,558,101) | -10.7% |
| 2 | General Service Non-Demand | 20,465,104 | 18,730,779 | (1,734,325) | -9.3% |
| 3 | General Service Demand | 62,196,053 | 59,388,364 | (2,807,689) | -4.7% |
| 4 | General Service Demand - Low Load Factor | 202,585 | 191,309 | (11,277) | -5.9% |
| 5 | Municipal | 3,505,298 | 3,228,564 | (276,734) | -8.6% |
| 6 | Lighting | 1,970,446 | 1,830,777 | (139,669) | -7.6% |
| 7 | TOTAL | \$155,908,865 | \$144,381,070 | (\$11,527,795) | -8.0% |

General Rate Design Criteria

Rate design is the culmination of a rate study whereby the rates and charges for each customer classification are established in such a manner that the total revenue requirement of the system will be recovered in an equitable manner consistent with the results of the allocated cost of service study and any applicable orders and/or requirements of local, state, and federal regulatory authorities. To the extent possible, rate design should consider and reflect overall revenue stability, historical rate form, conservation considerations, competitiveness with neighboring utility systems, and the policies of those charged with the management and operation of the City.

The proposed rate levels and rate structures developed and submitted to the City for consideration and adoption should continue to meet the following electric utility rate criteria for service provided by municipally owned utilities:

- Electric rates should be based on a rate policy which calls for the lowest possible prices consistent with customer requirements, quality service efficiently rendered, and a payment to the City.
- Electric rates should be simple and understandable.
- Electric rates should be equitable among classes of customers and individuals within classes, taking into consideration the cost of service.
- Electric rates should be designed to encourage the most efficient use of the utility plant and discourage unnecessary or wasteful use of service.
- Electric rates should comply with applicable orders and requirements of local, state and federal regulatory authorities that have jurisdiction.

Proposed Rates

The existing rates and the proposed rates necessary to recover the revenue requirements are summarized on Table No. 6-1. The proposed rates include Option 1, with the required rate increases by class applied to the customer, demand and energy charges. Option 2 reflects phased increases in customer charges, Phase 1, Phase 2, and Phase 3, along with smaller increases in energy and demand charges. Table No. 6-2 shows calculation of the projected revenues at the proposed rates assuming Option 2, Phase 3.

Power Cost Adjustment

It is recommended that a separate rate component continue to be implemented that recovers the cost of purchased power. It is proposed that this factor continue to be calculated every month.

Summary

The following is a comparison of the projected Test Year revenues produced by applying the projected billing determinants to the existing rates and the proposed rates for each classification:

| Toct | Voor | 2018 |
|------|------|------|
| 1681 | Year | ZUIX |

| Customer Class | Existing Rate Revenue (\$000) | Proposed Rate Revenue (\$000) | Rate Increase (%) |
|----------------------------|-------------------------------------|-------------------------------|-------------------------|
| Residential | \$61,011 | \$67,569 | +10.7% |
| General Service Non-Demand | 18,731 | 20,465 | +9.3% |
| General Service Demand | 59,388 | 62,196 | +4.7% |
| General Service Demand | | | |
| Low Load Factor | 191 | 203 | +5.9% |
| Municipal | 3,229 | 3,505 | +8.6% |
| Lighting | 1,831 | 1,970 | +7.6% |
| Total System | \$144,381 | \$155,909 | +8.0% |

Section 7 RATE COMPARISONS

General

This section provides a summary of the billing effects of the proposed rates for major rate classifications. Specifically, the tables in this section provide for two types of billing comparisons for each major rate classification at various levels of usage which include (i) monthly bills calculated under the City's proposed rates compared with bills calculated under its existing rates, and (ii) monthly bills calculated under the City's existing and proposed rates compared with those calculated under the rates of selected utilities for the billing month of May 2018.

Existing and Proposed Rates

Table No. 7-1 provides a comparison of monthly bills calculated under the proposed rates (Option 2, Phase 1) and the existing rates over a wide range of usage levels.

Comparisons with Other Utilities

Table No. 7-2 show the City's existing and proposed rates along with those of other electric utilities. As can be seen from these tables, the City's rates are comparable to other utilities.
