Dear Clerk Florida PSC Clerk,

Energy efficiency is an important part of controlling energy costs and power usage. It's important for our state to have energy efficiency goals that are meaningful as temperatures rise, the state's population grows and our demand for air conditioning increases.

I urge you to stand up for customers by adopting goals that will meaningfully help families and businesses cut energy waste and save money on bills.

Efficiency helps lower bills for all customers through less fuel being burned and deferring costly future power plants. Yet, the most recent proposed utility goals continue an alarming trend of utilities abandoning customers on using energy smarter.

Florida already badly trails states nationally, including in the Southeast, in capturing energy savings for customers. Yet instead of proposing higher goals, many of the state's largest utilities have proposed goals of zero or close to zero. With some of the highest electric bills in the nation, the utilities proposed goals, if approved, will ensure unnecessarily higher bills for hard-working families.

That's why I'm asking you to please support goals that are in line with the energy savings captured by leading states, and that will spur investments in energy efficiency to as many customers as possible. Let's not leave savings on the table.

Thank you,

Sincerely,
Holly Lichtenfeld
Boynton Beach, FL 33436
