Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Clerk Florida PSC Clerk,

Hello Members and staff.

Janet and I have lived here just East of Pensacola since 2002. We are full timers and own our home at 2641 San Clemente. Our heating and cooling has been Geothermal supported for nearly 10 years now. Our immediate objectives are to have a large enough solar electric system to cover most of our needs including an Electric car this year. I have watched Gulf Power make decisions I consider wrong over and over and you folks have let them do it. For on we are paying to operate a coal fired plant in Georgia that will never be cost effective to operate.

So please help us. The following I fully support.:

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers

overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Lloyd SDimonson
Milton, FL 32583
