Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

With the climate emergency now in effect we have to do all we can to reduce our carbon emissions and what better way than to reduce the toxic emissions from big electric produces.

WE NEED TO PROMOTE SOLAR ADAPTATION, not discourage it.

Sincerely,
Donald Nolin

Dear Commissioner Commissioner Julie Imanuel Brown,

Having a solar home and having net metering is a help in these different economic times. Net metering allows us to receive credit against our electric bills and allows us to have lower electric bills, not zero bills. We still pay for grid use and therefore do believe it is a fair system.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Dear Commissioner Commissioner Julie Imanuel Brown,

Hey,

I'm politically active independent voter who has contributed more than \$30K between last two cycles. I'm not nobody.

I'm discussing net metering in context of consumer with solar AND STORAGE. FPL should be able to cover the cost of their transmission and billing infrastructure. Without a doubt.

In terms of production cost for usage by solar customers when the sun is not out, charge the solar consumer a higher rate than the standard rate. You have to net meter it at that higher retail rate, but this ensures that solar consumer pays their fair share for baseline power, should they need it.

Beyond that, their issues over net metering are about profits, not fairness, not service to consumers or state, nor reasonable coverage of production. Let FPL make the profit from those that use their energy, and pay similarly those that create and store energy--over time reducing FPLs need for additional infrastructure.

AND while it is OK to have a fixed annual true-up, the date should be chosen by the homeowner, not the utility. We currently get screwed by the arbitrary date, right?

Sincerely,
Kevin Burns

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Alex Sherry

Dear Commissioner Commissioner Julie Imanuel Brown,

I have solar on my home. I believe it is good for the environment and is the right thing to do. Net metering is what makes it affordable. Without net metering it would be much harder for me to pay my bill.

Net metering is a fair system.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Keval Fox
Orlando, FL 32832

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Paul Slack

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.
