Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Jamesp Davis
Bradenton, FL 34212

Dear Commissioner Gary F. Clark,

We have made a significant investment in Solar power on our home. Without net metering our investment in our Solar System is not paying for itself as has been calculated when we purchased the system. It would take many more years for this payback.

If the net metering is now taken away, we have been "cheated" when we purchased the system as it has been advertised that with net metering we would save and recoup our investment much quicker.

Home Solar power is the best tool for extending the life of the power grid and make it more reliable, especially during hot summer days when everyone uses their air conditioner. Solar powered houses reduce the load on the grid as they "power themselves" during those high usage times.

It would be a huge step back in encouraging more houses to use Solar Power, especially in Florida, the Sunshine State!

Sincerely,
Reinhard Hussel

Dear Commissioner Gary F. Clark,

Hey,

I'm politically active independent voter who has contributed more than \$30K between last two cycles. I'm not nobody.

I'm discussing net metering in context of consumer with solar AND STORAGE. FPL should be able to cover the cost of their transmission and billing infrastructure. Without a doubt.

In terms of production cost for usage by solar customers when the sun is not out, charge the solar consumer a higher rate than the standard rate. You have to net meter it at that higher retail rate, but this ensures that solar consumer pays their fair share for baseline power, should they need it.

Beyond that, their issues over net metering are about profits, not fairness, not service to consumers or state, nor reasonable coverage of production. Let FPL make the profit from those that use their energy, and pay similarly those that create and store energy--over time reducing FPLs need for additional infrastructure.

AND while it is OK to have a fixed annual true-up, the date should be chosen by the homeowner, not the utility. We currently get screwed by the arbitrary date, right?

Sincerely,
Kevin Burns

Dear Commissioner Gary F. Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Christopher Daly
516 Carriage Rd Indian Harbour Beach, FL 32937-4042

Dear Commissioner Gary F. Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse. This does not even consider the economic, social and environmental impact that renewable energy source as solar benefits this country. As a homeowner with solar panels installed one year ago, we have planted the equivalent of over 300 trees and have saved over 40,000 pounds of Carbon dioxide emissions.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
