Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

Net metering injects sorely needed competition and choice into what's essentially a monopoly. It doesn't significantly shift costs to lower-income customers - in fact, it may reduce costs ref: <https://www.freeingenergy.com/distributed-rooftop-solar-raise-electricity-prices-low-income/>. It also has driven innovation like shared solar at Duke Energy: <https://www.duke-energy.com/home/products/renewable-energy/fl-shared-solar> (How can Duke offer near fixed rates/deeply discounted future rates on shared solar, without impacting low-income customers who don't enroll in the program?)

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Colin McDowell

Dear Chairman Art Graham,

I have just had solar panels installed in an effort to reduce my reliance on climate-changing fossil fuels used by power companies. I have not yet seen how it will affect my monthly power bill.

But I am very much concerned about power companies' attacks on the benefits of using solar power.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Dear Chairman Art Graham,

This action of getting rid of net metering is ridiculous. If you take this action you should also deregulate the state of Florida. This monopoly that has been allowed to happen is nothing short of corrupt. How many Duke Energy and FP&L former employees are on the Florida Utility Commission?

I will be asking the Florida State Attorney to take a look into this abuse of power.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

There is no gray area here or confusion about what is right or wrong. What would be one possible reason why you would take away net metering? Who is behind this and how do they stand to benefit? Pretty simple questions to ask, and to answer..

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Kenneth Schreiber

Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

There is no need to get rid of net metering so why are you considering it?

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
