Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Donald J. Polmann,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
maurice kessing

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse. This does not even consider the economic, social and environmental impact that renewable energy source as solar benefits this country. As a homeowner with solar panels installed one year ago, we have planted the equivalent of over 300 trees and have saved over 40,000 pounds of Carbon dioxide emissions.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Philip Spagnuolo

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Donald J. Polmann,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Karen Picciano

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Donald J. Polmann,

I am a homeowner who has lived in Florida all my life. My wife and I are just starting the process of getting solar panels on our Home. Without net metering I fear that investment will be wasted. I also fear that other Floridians will not continue to green our energy production. We here in Florida are experiencing some of the worst effects of climate change (heat, hurricanes, sea level rise). We need to be setting an example for the world, not making life easier for big energy corporations.

The only sensible argument against net metering is that people who don't have solar panels (usually poorer citizens) end up subsidizing the cost of people that do, because net metering pays producers who benefit from the utilities existing infrastructure. But I would argue that everyone benefits from the environment being cleaner. And in Florida (unlike some other states) I don't get paid (production credits) for this positive externality, but that is fine for me. I'm not doing this for the money. But it still has to be affordable. If you end net metering, solar panels will not be affordable. You will destroy the environment, you will destroy green jobs. And for what? To line FPL's pockets, that has been done plenty already.

Sincerely,
Barry Solomon

Dear Commissioner Commissioner Donald J. Polmann,

We have made a significant investment in Solar power on our home. Without net metering our investment in our Solar System is not paying for itself as has been calculated when we purchased the system. It would take many more years for this payback.

If the net metering is now taken away, we have been "cheated" when we purchased the system as it has been advertised that with net metering we would save and recoup our investment much quicker.

Home Solar power is the best tool for extending the life o the power gird and make it more reliable, especially during hot summer days when everyone uses their air conditioner. Solar powered houses reduce the load on the grid as they "power themselves" during those high usage times.

It would be a huge step back in encouraging more houses to use Solar Power, especially in Florida, the Sunshine State!

Sincerely,
Reinhard Hussel

Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Robert Burr

Dear Commissioner Commissioner Donald J. Polmann,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Donald J. Polmann,

Solar paneling is our sustainable future. It is in our interest as Americans and Floridians to have the benefit to solar power for homeowners and businesses of net metering for power use.

Amid a public health and economic crisis is not the time to make changes to solar rights that will hurt jobs and take money out of people's pockets.

Going into the pandemic, Florida ranked fourth among the states in electricity produced from solar panels, sustaining an industry employing more than 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, employing 250,000 people. Due to the pandemic, Florida has already lost 22 percent of its workforce due to economic uncertainty, and this could get worse.

It only make sense that Florida people and businesses be able to choose how they power their lives. Solar panels and batteries contribute to the resilience of the electric grid. During hurricane season, Floridians need more tools – not fewer – to weather storms. Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Jean Etsinger
