**Sent:** Wednesday, September 2, 2020 9:40 PM  
**To:** Office of Commissioner Fay  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Dale Zager  
149 SE 4th St Deerfield Beach, FL 33441-4766

Dear Commissioner Andrew Giles Fay,

I am hopeful that someone actually reads this versus just tallying it as another form letter sent without any real consideration. I've been through this before (although previously as more of a spectator than a concerned actor). I'm gonna' leave in a lot of the jargon below as some of it is pertinent although you very well should already be aware of it.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

I'm going to personalize this a bit. I am fully in support of net metering and a quid pro quo exchange regarding electricity up to the full annual consumption by a private source. That said, I'd need to see more information to go beyond that. I don't think that private solarization should be seen as a way to earn income but rather to provide diversity to the collection of energy by the system as a whole I saw this mess when I lived in Nevada. Fairness to me is a one for one exchange of KWh with the excess being reimbursed at the wholesale rate.

Where this gets tricky is that states/systems are prone to directly promising or strongly implying that there will be a retail recompense for overage. If that's the case, then you've painted yourselves into a bit of a corner in terms of fairness and equity. At the very least, if that is the case, you should consider a process of change over time to allow the people who are already into the system based on past promises to be treated fairly. You could set a change of policy date and grandfather in those already acting according to the current presumption. That's just a thought. Good luck.

Sincerely,  
Robert Sturk  
2450 Hively St Sarasota, FL 34231-6825

**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

We installed solar 8 yrs ago and have to pay annual liability insurance costing \$500 a year - in order for FPL t allow us to use it. We also struggled to get the paperwork completed correctly - in other words FLP played hard ball in letting us start.

now, as we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida. Most months we still pay extra to FPL so the few times we qualify for net metering are a big help to offset liability insurance costs. Let Florida be part of the 21st century embracing new technology and benefiting the planet.

Sincerely,  
Gillian Whatmore

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

There is no gray area here or confusion about what is right or wrong. What would be one possible reason why you would take away net metering? Who is behind this and how do they stand to benefit? Pretty simple questions to ask, and to answer..

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Thomas O'Reilly  
215 Plantation Blvd Islamorada, FL 33036-3006

Dear Commissioner Andrew Giles Fay,

I have begun the installation of solar panels on my home, using net metering. It is unconscionable that the Sunshine State would act to deter residential and business solar energy production. I am not going off the grid. I am putting energy into it. Utility companies try to SELL customers solar energy that they produce in a limited way, instead of offering incentives to increase the solar industry. That industry is growing in a time when the economy is stagnating. I know more and more people who are installing solar. Think about it.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida. We installed solar panels five years ago on our home, and they are producing clean energy as promised....with the regularity and dependability of a fine Swiss watch. And we installed them to help the environment, and future generations. P.S. I had a 32 year career with Maryland's EPA, and knew Florida was the perfect location for solar power....as should every politician in this State, and elsewhere.

Sincerely,

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Shawn Anderson  
Cocoa, FL 32926

Dear Commissioner Andrew Giles Fay,

Hey,

I'm politically active independent voter who has contributed more than \$30K between last two cycles. I'm not nobody.

I'm discussing net metering in context of consumer with solar AND STORAGE. FPL should be able to cover the cost of their transmission and billing infrastructure. Without a doubt.

In terms of production cost for usage by solar customers when the sun is not out, charge the solar consumer a higher rate than the standard rate. You have to net meter it at that higher retail rate, but this ensures that solar consumer pays their fair share for baseline power, should they need it.

Beyond that, their issues over net metering are about profits, not fairness, not service to consumers or state, nor reasonable coverage of production. Let FPL make the profit from those that use their energy, and pay similarly those that create and store energy--over time reducing FPLs need for additional infrastructure.

AND while it is OK to have a fixed annual true-up, the date should be chosen by the homeowner, not the utility. We currently get screwed by the arbitrary date, right?

Sincerely,  
Kevin Burns

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

sa ei

Dear Commissioner Andrew Giles Fay,

I installed solar panels on my roof approximately 1 year ago and am happy that most of the electricity in my house is produced by the sun. In the winter I produced more power than I used. I do think that that I should be compensated for the power I produce and is used by other people.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.
