Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Donald Polmann,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Marjorie Peter

Dear Commissioner Commissioner Donald J. Polmann,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Kevin Whelan

Dear Commissioner Commissioner Donald J. Polmann,

I recently had rooftop solar installed at my home. Though I generate more electricity than I use, I will always have a monthly FPL bill. We are working during the day when the panels are at their most productive and home in the evenings and night when they are non productive. This is true for most residential users. My rooftop solar benefits FPL, who has stated they are relying on residential rooftop electricity generation to meet their 40% of their commitment to clean energy. They NEED homeowners.

It is obscene to me that a FOR PROFIT company paying multiple tiers of CEOs tens of millions of dollars each AND bonuses when they are not meeting their commitments.

I don't mind my overproduction feeding the grid. I DO MIND that I bear the risk of buying and maintaining a system that makes FPL (and its parent company) executives even wealthier.

Net metering is FAIR.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Dear Commissioner Commissioner Donald J. Polmann,

Florida is the Sunshine State and should be leading the country in every type of solar installation, especially rooftop. Floridians need to be secure in their ability to have power, especially during a public health and economic crisis. We need to ADD incentives for solar energy, not remove them! Please keep net metering!

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Donald J. Polmann,

I'll keep this simple... any group approaching the PSC with a request to remove net metering is not working in the best interest of the state and our residents.

I'm not an enemy of big corporations. I work for one myself and am a fan of capitalism. I'm also a fan of equal opportunity and common-sense decisions that allow a state to make sure its people live the healthiest lives possible.

Solar energy isn't the sole answer for future energy usage, but it's part of the puzzle. Each homeowner that has solar power is helping take the pressure off the grid, while at the same time helping to make for a cleaner environment.

If net metering is ever diminished or taken away it would essentially bring solar installations to a halt as the monetary numbers wouldn't make sense anymore. I'm not trying to make a profit with my solar panels, but rather trying to supply enough power to counteract what I used to take from the grid...and it's working!

I'm still connected to the grid and like my energy company. I want them to stay in business and continue to thrive.

I didn't complain when I over-produced by a little last year that I was only paid cents on the dollar...essentially providing free power to the grid. I understand that this isn't supposed to be a 'for-profit' arena when adding solar to a house. So although the tariff rates are very low on the 'purchase of as available energy', I didn't complain. In return I don't expect my solar rights to be removed by an outside group.

The PSC should deny anyone that approaches the state about removing net metering and any other tactic to diminish solar power.

We're the sunshine state after all!

Sincerely,
Brian McClure

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Donald Polmann,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Donald J. Polmann,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Scott Garrow
Sanford, FL 32773
