Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Allen Marcovitch
1155 SW 25th Ave Boynton Beach, FL 33426-7420

Florida is a solar rich state. Please allow the residents of the state to make use of solar credits and benefit from this resource that we have. In fact, energy companies should be required to use more solar energy rather than less so that we can become less dependent on fossil fuels.

Sincerely,
Karen Amundrud

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

Climate change is real. Continuing what we've been doing only exacerbates the problem. Solar energy, as well as other eco-friendly power sources, help to improve our future and our children and grandchildren's lives. Why would anyone want to negate their use except for their own economic interest? Don't let one groups greed keep Floridians from trying to improve their future.

Then there's also the economic concerns of Floridian workers. The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is hardly the time to create more uncertainty by making changes to solar rights that will hurt jobs, take money out of people's pockets, and serve to abandon critical efforts to ameliorate climate change.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, a "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half--i.e., 125,000 jobs and families at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty. Without thoughtful, visionary, courageous leadership, this negative pattern could grow worse.

People and businesses in Florida rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience and intelligence of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that could be coming our way.

Please pause to intelligently generate a wholesome vision of Florida's energy needs and solutions rather than support more visionless, fossil-fuel status quo which has clearly demonstrated abundant harmfulness and merciless contributions to climate change--as evidence by record-breaking conflagrations in California, Oregon, Australia, and record-breaking domestic and worldwide flooding.

The fossil fuel industry is a dinosaur that has been fed by a gravy train of taxpayer subsidies and ignorance. Fossil fuels were great during the Industrial Revolution, but have long outlived their usefulness. Yet this dinosaur industry continues to pressure and manipulate public servants to "keep doing the same old thing over and over again while expecting different results." This is insanity. We're counting on your sanity, wholesome vision, and thoughtfulness.

Please evaluate something greater and more important than personal interest, and actively support sane solar power, solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Thank you for your integrity, consideration, and support for real solutions.

Sincerely,
Katherine Morgan

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Tom Chiotti

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
John Forbes

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

Florida's future as a competitive provider of power depends on solar energy.

During a public health and economic crisis is the wrong time to exacerbate uncertainty by making changes to solar rights. It will hurt jobs and take money out of people's pockets.

Prior to COVID-19, Florida was #4 in production of electricity from solar panels in the country and employed over 12,000 people. "Solar installer" was the fastest growing job in the country. The industry employed 250,000 people. This pandemic could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic instability and it could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy as well as choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Dear Commissioner Commissioner Julie Imanuel Brown,

Thank you for your service on the FPSC.

I know that you each work diligently in the public interest and seek to balance competing interests.

I am writing to urge you to continue your support for net metering.

I believe that the long-term increase in resilience that a distributed solar system provides is worthy of your continued support. Net metering is a critical component to make this affordable for home owners like me.

This should complement and not replace the utility scale power generation we have from FP&L. This partnership between homeowners and FP&L is the right thing for my community and for Florida.

With a warming earth increasing the power of storms, an increase in decentralization of power generation is one way to increase our ability to adapt to a changing environment. My partial independence from the grid will help my family and those of my neighbors here in Coral Gables in the event of a prolonged outage such as the one we experienced with Hurricane Andrew. 23 days without power. I don't want to repeat that again.

Thank you for your support.

Sincerely,
Richard Bookman

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

Time and time again, Florida’s voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven “Amendment 1”, which would have prohibited the subsidization of solar energy, and approved ‘Amendment 4’, which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people’s pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, “solar installer” was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians’ safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Cynthia Sanders

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Please **DO THE RIGHT THING** for the future of this planet and not just think from your own narrow perspective. We **MUST** wean this country **OFF** fossil fuels. The sun provides an **ENDLESS** supply of energy fuel. The sun is not ruining our fragile natural environment with mining, drilling, fracking, leaking pipe lines, deforestation, contaminating our ocean wildlife and more. One way to leave an admirable legacy for generations to come is through solar power.

Thank you.

Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
ANA MALDONADO
19053 Fly Rod Run Loxahatchee, FL 33470-6024

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Further, deregulation of electricity providers in the entire state of Florida should commence immediately.

Sincerely,
John Wicklund
