Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald Polmann,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,
Stephan Filsinger

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Donald Polmann,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Etta Juge

Dear Commissioner Donald J. Polmann,

Two steps. First step is flat rate pricing. If you can generate a kw for 4 cents, sell it right from the generator for 5 cents. That's a 25% profit. Second step is have a cost per kw increase proportional to load, up to twice the cost at 95% load, and about 5 steps from nighttime base load. This would stimulate a load management industry. The solar sell back should track the current cost per kw based on load. So the guys that have extra kw solar capacity aren't getting shortchanged. They are generating during the peak. Pay them. You are saving the expense of running the peakers.

Sincerely,
Bob Gardner

Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Joan Lerner

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald J. Polmann,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald J. Polmann,

My husband and I have recently signed a contract for solar electricity to power our home, we are awaiting our installation day. One of the reasons we chose to go ahead with this project was the fact that FL has net metering. Without that incentive, we likely would not have taken on such an expensive project. To hear that net metering is under attack once again is very disheartening. The utility companies should not be gaining free electricity from any excess that we generate, while charging market rates to others for that free electricity. Where I live, we have Duke Energy, which has the highest rates of anyplace we've ever lived in the past, and perhaps the highest rates of any other companies doing business in Florida. Those high rates are another reason we chose to go ahead with this project. We look at it like we are pre-paying for our electric needs for the next 7 - 10 years, which is how long it will take us to break even. If you remove net metering, the break even point will be even longer, making our investment questionable.

Further, if net metering goes away, the solar industry and all it's employees will suffer. Fewer people will feel it's worthwhile to add solar panels to their homes. The more people who add solar, the less strain there will be on the grid for everyone else, which seems pretty important to me.

Please do the job that your commission was created for - and protect the PUBLIC, not the electric companies.

Sincerely,
Kim Morrissey

Dear Commissioner Donald Polmann,

Do not bend to utility companies who want to steal the solar energy I and other Floridians paid to produce. I spent my money on solar panels. I should get the benefits of that. Changing solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs is literally working against Florida's economy and people to line pockets of a few already extremely wealthy stakeholders of utility companies.

It is your duty to protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida. The only reason to change it would be in favor of increasing the net rate to benefit Individual Floridian solar producers.

Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Betty Wilson

Dear Commissioner Donald J. Polmann,

One building at my church has received power from solar panels since April 2007. Since they City of Tallahassee residential and commercial customers have installed more than 2000 kW DC of solar. Solar installations have been at a record rate since the beginning of 2019 employing many installers. Systems are larger than 10 years ago now averaging over 9kW per installation.

We in Tallahassee are looking for continued growth and even more jobs created.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

I would love solar power where I live! Solar and Florida go together well. We are the Sunshine State after all. It would help save the planet by reducing our carbon footprint. It's clean. Now it's becoming less expensive so more people could use it.

Be responsible and don't let this group win.

Sincerely,
Trudy Miner
