Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Yazmin Contreras

Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
mildred zimmerman

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

My wife and I are retired Florida State employees. We live on a fixed income. This year we decided to install solar panels on our home. We dipped into our retirement savings to do this. We hope to see a reduction in our electric bill. We also see this as our small way to help reduce the amount of carbon based fuel used by Duke Energy. This should benefit all of Duke's customers by lowering fuel costs and cutting energy bills for everyone.

We are strongly against any changes in the rules governing Net Metering.

We would prefer to see you working toward expanding the benefits for Florida citizens to go solar.

Sincerely,
William William Gorman

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid. As a Floridian, we already pay an exorbitant amount for power. The credit we receive not only gives us a much needed break in utilities, it also helps to promote clean energy, such as solar power, and allows us to put energy back into the grid while producing less emissions. Taking this credit away will only benefit fossil fuel based companies and their greed for profit. It will also deter the growth of clean energy in our beautiful sunshine State. It is our responsibility to make sure that we lower our emissions and promote the development and use of clean, affordable energy. We strongly urge you to uphold current policies, such as net metering.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Robert Baldwin

Dear Chairman Art Graham,

Let me start by saying I have worked in the energy sector for almost 20 years and have seen what utilities have done to prevent consumers in this state and others (Arizona, New Mexico, Texas) from having equitable access to solar power for their homes and businesses. In the industry, it's known as "DERS" or Distributed Energy Resources (insiders refer to it as Disruptive Energy Resources because it takes money from the utilities).

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Dear Commissioner Chairman Art Graham,

One only has to watch the evening news to know that the impact of climate change is already being felt throughout our country and the world. It is imperative that we pursue a course of action in our daily decision-making that will help us to mitigate the damage from our energy intensive economy. One of the proven ways to achieve this is through the transition to renewable energy sources. Florida is blessed with abundant sunshine and, by all rights, should be a world leader in this transition. Net-metering is an essential element in fostering the growth of rooftop solar in our state. It is vital to all Floridians that we support and protect this important component of our supply of renewable energy. As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

Dear Commissioner Chairman Art Graham,

Florida homeowners have spent many millions of dollars counting on the value of net metering. Of course, utilities find this inconvenient.

As an electrical engineer, I can unequivocally state the advantages of local PV power generation are obvious. It is far more beneficial to the citizens and state of Florida than centralized power production, especially fossil fuel sourced power.

Please extend and embrace net metering and other policies friendly to local, citizen sourced power. It is the future.

Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Antonio Sanchez
