**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Bill Holden  
Clearwater, FL 33760

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Ramon Lacomba  
Tampa, FL 33624

Dear Commissioner Chairman Art Graham,

It will be a long time, if ever, before renewable energy will be more profitable than non-renewable energy. But profits do not drive policy. The good of Floridians and the American people do drive policy. The net metering program is undeniably a step in the right direction to make the shift towards renewable energy and in combatting climate change.

Please do not take a step back from positive progress because profits have not yet aligned. Industry's mindset is slow to change, but, with positive and persistent legislation, we can make massive strides as a society towards a better lifestyle for our children, and our children's children.

Please continue to support the net metering program.

Sincerely,

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Hannah Whiteman  
Alexandria, VA 22314

**Sent:** Monday, September 21, 2020 12:15 AM  
**To:** Office of Commissioner Graham  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
David Kalb  
Winter Haven, FL 33884

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

As a Florida resident, Vietnam Veteran, and retiree on a fixed income, I decided some years ago to purchase my own solar P/V system to help stabilize my energy bill and to provide energy security during grid failures from natural or technological crisis.

I have invested \$70,000 in P/V panels and batteries to ensure my own "energy security", and to help my neighbors in times of grid failure. This system has significantly reduced my "carbon footprint" and reduced greenhouse gases - helping to preserve the biosphere. Net metering was one incentive that convinced me and others to make this personal investment in energy production & storage.

Each month I pay a "connection fee" amounting to \$127.56 annually as my fair share for helping Duke Energy maintain the grid.

Contrary to disinformation you have received from others, solar system users DO help support the grid; those costs are NOT passed on to non-solar customers.

Additionally, AT NO COST TO DUKE ENERGY, my "personal solar power plant" periodically sends excess power BACK to Duke - they did not spend a cent to produce that excess power AND they can send it on to others and CHARGE for it!

Net metering in Florida is a marginally-fair means for me to recoup a small fraction of my investment in building this solar system. It remains an important incentive for others to invest THEIR MONEY in creating a distributed power system that increases Duke's power production, resilience, and reliability - again, at little cost to Duke.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

I will be closely following your deliberations and trust that your decisions will support the benefits of solar energy for Duke Energy, consumers like me, and the future of Florida's economy and environment.

Best regards,

Sincerely,  
Will Miller  
2190 Overbrook Ave N Belleair Bluffs, FL 33770-2031

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
PEGGY MILLER

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Mariangel Robles  
Miami, FL 33130

Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

The push for the reversal or amendment to current legislature by the utility provider speaks more to corporate greed and the immediate desire to pad one's pockets than it does to promote overall health and sustainability of the states citizens and renewable energy. The utility company should see a reduction in operating overhead as solar use grows. Less power plants would be needed, less fuel to run current plants, less maintenance costs, etc.. They seem to be worried about profit margin today rather than profit and sustainability into the future. Shortsightedness has got many a person in trouble and will continue to do so. We should be looking for new solutions to the energy/global warming crisis not trying to drag our old traditions and processes with us into the future.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Dear Commissioner Chairman Art Graham,

Although I don't live in Florida (we are in Colorado), everyone should be concerned with any disincentive to renewable energy. Fossil fueled pollution crosses all borders and we should be doing everything we can to reduce greenhouse gases and global warming so as to minimize rising ocean levels.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make Florida a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - Floridians don't need sudden regulatory changes in solar policies to create even more uncertainty.

The current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

On behalf of all humankind regardless of where we live, please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving the successful net metering rules in Florida.

Sincerely,  
Dave Harris

**Subject:** New solar customer

Dear Commissioner Chairman Art Graham,

Good morning:

My wife and I entered into a lease with sunrun and our system has been online for about 30 days. Without net metering, the system would not be economically feasible without a battery that costs tens of thousands of dollars. Altering or reducing the net metering rules will empower the utilities to exploit the consumer by forcing them to pay a higher utility bill while excess energy is either wasted or worse yet, stolen by the power company without just compensation.

With the abundance of sunshine and with the economic and climate challenges we face, there is no logical or rational basis to reduce alter or diminish current net metering rules.

Doing so may implicate Florida residents' due process, our constitutional right to contract and may amount to an unlawful taking of property. It would also kill residential solar with no justification, only to help the utilities maintain control and increase their profits over the interests of the people of Florida.

I also agree with the following;

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving (or improving and expanding but NOT reducing or diminishing) our successful net metering rules here in Florida.

I am happy to provide comments during today's meeting if you want to call me at 8134048749 or send me an access link.

Thank you

Sincerely,  
Justin Levitt

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Mac McCarraher  
18908 Blanchester Ct Umatilla, FL 32784-7400

Dear Commissioner Chairman Art Graham,

We have less than 10 years before the world passes the tipping point on climate change. As we struggle with an historically active hurricane season (not to mention historic flooding from Sally and fires in the West), it is time to accelerate development of non-carbon energy sources, not to create more uncertainty by signaling changes in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Will Chance  
Opa Locka, FL 33055

Dear Commissioner Chairman Art Graham,

As a Florida resident, the state should be enacting as many incentives as possible to capitalize on its abundant sunshine at the utility, business, and residential level. It is shocking to see so little residential solar voltaic installations. Net metering is a critical enabler. Residential solar already pay a monthly "grid connection fee.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. Dear Commissioner Chairman Art Graham,

As it is hard enough to obtain solar power with the less than reputable companies here in Florida. Florida should be the first state to make Solar Equipment as a consumer product like any other appliance instead of hindering solar development.

Florida could be number one in green energy production adding millions of new jobs in leading technologies of green energy but instead the consumer must have these technologies far to regulated and development halted by un reputable companies operating with little to no adherence to local laws or electrical codes.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

Dear Commissioner Chairman Art Graham,

As past FL residents/natives, and potential returning retirees, what the hell are the discussion and questions about. Is some GOP bigwig, or politician about to lose their golden life? Florida, the sunshine state, and they are trying to reduce or inhibit the use of solar. No solar and my retiree money stays up north, and I shake my head in disgust.

We struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

Dear Commissioner Chairman Art Graham,

Don't be known as people who stopped progress and made our state less competitive. Keep Solar on our roofs and hold electric companies responsible for adapting to our needs for clean energy.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. Let that sink in... the SUNSHINE STATE is FOURTH. That's embarrassing.

The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

I wholeheartedly object to limiting solar power net metering in order to increase profits. This is outrageous and limiting solar expand was rejected by Floridians in 2016! Clearly, citizens and customers want options that will help the earth. As a Florida native and taxpaying citizen, I believe we should embrace every opportunity to increase sustainable and renewable energy. By limiting the net metering rule, this will deter other homeowners from investing in this solar energy, thus increasing our reliance on fossil fuels. This is a detriment to not only Floridians, but the entire world as we are a heavily populated state and this will increase harmful emissions from energy production.

I ask you to please vote no!

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida. Thank you.

Dear Commissioner Chairman Art Graham,

It is imperative for the future of Florida to have widespread use of home solar systems. It supports many jobs, offers security in that there is distributed power, helps to decrease our reliance in fossil fuels and thus climate change, and it just makes sense. I support fully off grid options for citizens too.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Andrea Willer

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Amanda Gordon

Dear Commissioner Chairman Art Graham,

I'm am concerned as a citizen of Florida that our voices, health, and environment are being disregarded by for--profit greedy entities such as utility company's and oil companies that put profits before the heath and well-being of their customers and environmental health. It is absolutely criminal that these businesses think that they can rewrite the rules and laws to benefit themselves and squash the voters voices in an attempt to increase already ridiculous amounts of profits being currently earned. This was already put to ballot and the cl voters said NO These decisions based on nothing more than GREED effect us all. Again, It is absolutely criminal to think that theses utilities can write their own rule book. As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

Dear Commissioner Chairman Art Graham,

In my opinion efforts to roll back Florida's solar energy policy to increase profits for a few, at the expense of many, and the future and health of the planet is unconscionable. The voters of Florida saw through the shenanigans with the ambiguously worded Amendment 1 in 2016 and said no. This voter will be paying close attention to your actions today and in the future. Just do the right thing, put your efforts toward finding a win-win situation for utilities, shareholders, solar energy and our planet.

**To:** Office of Commissioner Graham  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

I personally would appreciate that all utility companies be far more open to personal solar generation as I have invested a great deal of time researching dozens of systems and it is my opinion that the range of solar costs for those running on-grid, off-grid, and hybrid systems for individuals installing it themselves costs 2-4 cents a KWhr. The higher end is the ability to operate your solar array when the utility grid goes down as your inverter has to perform the generation of the pure sine wave your home needs. In short, I find it unacceptable that a company providing power to my house can mandate I stay connected to the grid, pay fees, and restrict my solar installation of any size. It should be considered that for any strong arm move they make Florida residents will go so far as to refuse payment and live off-grid resulting in a large divide. I find utility companies charging 200-400% more than what a homeowner can produce with no expertise or scaling price reduction absurd.

I can provide a great deal of information to support all my statements and hope that you go so far as to enforce that Utility companies enter in a 25 year commitment with homeowners (standard solar warranty for many components) with net metering OR offer the ability to be off-grid and pay no fees to have the meter removed and service to be suspended.

Dear Commissioner Chairman Art Graham,

Its time to move forward with renewable energy projects and production in Florida. We should be a leader among the states in utilizing solar power at the residential level.

The current net metering rule was good policy when it came into play and remains so now. Let's not mess this up. Let's grow this segment of the solar market by allowing citizens to choose to power their homes and businesses with Florida's number one natural resource, sunshine.

There is a reason that the ballot initiative in 2016 was broadly supported. Florida citizens support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.
