Comments:

I am writing about Solar Energy and "net metering". I want to strongly urge you to keep "net metering" in place. It's a critical incentive in motivating people to install solar panels at a time in our history when we need alternative energy sources. At considerable cost to myself, I installed solar panels on my home. Those panels generate electricity for our state. I should be compensated, like any other energy supplier, for the energy I provide to our state. That compensation is received through "net metering". You must vote to keep "net metering". Thank you for your time.

Dear FL PSC Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, solar installer was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools not less in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and Florida residents from additional uncertainty by preserving net metering here in Florida

Sincerely,

Andrea Yanez
