Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,
Taylor Neverman

Dear Commissioner Andrew Giles Fay,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities. In addition, it can also be a resiliency measure. Energy efficient homes are more resilient in power outages.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

Improving energy efficiency will allow us to use energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families like mine make our homes more efficient, safer, and secure will lower our energy bills. In light of the damage wreaked on our economy by Covid and the onset of climate change, we need to make this happen now more than ever.

The way you set goals for the state's largest utilities hasn't been modernized in almost 30 years, which has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better!

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize decades-old practices and demand that utilities do more to increase efficiency, especially for low-income customers. The rule is outdated, we must get it right.

Sincerely,
Elaine Franklin
