**Subject:** RE: Docket 20200226

Good Morning, Jody Furch and Nancy Ferioli.

We will be placing your comments below in consumer correspondence in Docket No. 20200226, and forwarding them to the Office of Consumer Assistance and Outreach.

Thank you!

Toni Hover  
Commission Deputy Clerk I

Subject: Docket 20200226

We read with great dismay at Jack Boyer's and EU's presentation at the Public Service Commission, their asking for approval for EU to provide sewer to LGI and while We were on the fence concerning the EU proposal initially We are now completely opposed to the idea. EU is guessing, experimenting and we at LGi are his guinea pigs?

We have an ATU system at our home, the same system that Charlotte County uses to treat waste water and the same system that EU proposes to give our waste to after we are forced to abandon our perfectly good system. The difference is, our system is inspected biannually, passes with flying colors, and we control exactly what goes down. Cannot say the same when waste is simply pumped away.

If Charlotte County is really concerned about LGI and other locations, and the impact on water quality, the adept of a Health should come to the island and inspect every system (we know many are failed- our neighbor across the street for example, but they rent continuously regardless) and condemn systems that no longer work and force owners to install ATU systems that DO work. This is by far the best plan for the environment and it alleviates the uncertainties of cost and function, and even liability for both Charlotte and homeowners. This is the only way forward... yes, it might be painful to some homeowners but their failed septic systems need to be addressed, perhaps condemned ( they are being selfish anyway in operating failed systems) but the roads will not get torn up by pipes, the landscape damaged and best of all, individual home owner will be responsible for it's care. Every house here needs to have an operating permit for their system and inspections by a reputable company like we do for our system.

Worst of all, Forcing us to abandon a system that works in order to buy a private individual's system, with no idea of the cost of installation, maintenance, and yearly costs is wrong period. This is an individual owner's responsibility, and we know their are systems that work, but we have no confidence that EU can do this job.

Thank you;
