BY E-FILING

Mr. Adam Teitzman, Clerk
Florida Public Service Commission
2540 Shumard Oak Boulevard
Tallahassee, FL 32399-0850

Re: Docket No. 20220067-GU: Petition for rate increase by Florida Public Utilities Company, Florida Division of Chesapeake Utilities Corporation, Florida Public Utilities Company - Fort Meade, and Florida Public Utilities Company - Indiantown Division.

Dear Mr. Teitzman:

Attached, for electronic filing, please find the Testimony of Mike Reno.

Thank you for your assistance with this filing. As always, please don't hesitate to let me know if you have any questions whatsoever.

(Document 12 of 27)

Sincerely,

A handwritten signature in cursive script that reads 'Beth Keating'.

Beth Keating
Gunster, Yoakley & Stewart, P.A.

**BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION**

FLORIDA PUBLIC UTILITIES COMPANY

Docket No. 20220067-GU

Direct Testimony

of

**Michael J. Reno,
Ernst & Young, LLP**

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS AND POSITION.**

3 A. My name is Michael Reno. I am a managing director in Ernst & Young LLP's
4 National Energy Practice. My business address is 1101 New York Avenue, NW,
5 Washington, District of Columbia, 20005-4213.

6

7 **Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?**

8 A. I am testifying on behalf of Florida Public Utilities Company.

9

10 **Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?**

11 A. I graduated from Kansas State University in 1987 with a Bachelor of Science degree
12 in Business Administration, with an emphasis in accounting, and a Master of Science
13 in 1988, with an emphasis in accounting. After completion of my Master of Science
14 in Accounting, I joined Deloitte Tax LLP, formerly Deloitte Haskins & Sells. In 2012,
15 I joined Ernst & Young LLP as an executive director in the National Energy Practice.
16 I am a Certified Public Accountant, licensed in the District of Columbia and in the
17 Commonwealth of Virginia. I have practiced public accounting for over 32 years. In
18 my practice, I provide tax services to regulated water, electric and gas utilities. I
19 regularly assist clients with tax planning, support and explain tax reporting positions,
20 and perform tax return reviews. My experience includes providing advice on
21 accounting for income taxes and performing tax provision reviews. I also regularly
22 consult with companies regarding tax accounting and its impact on the rate setting
23 process as well as compliance with the normalization rules. Additionally, I am a

1 frequent speaker at industry seminars and conferences on the topic of tax accounting
2 for rate-regulated utilities. I have spoken at the Edison Electric Institute tax committee
3 meetings and the American Gas Association tax committee meetings in addition to
4 other industry meetings.

5
6 **Q. HAVE YOU TESTIFIED IN ANY REGULATORY PROCEEDINGS?**

7 A. Yes, I have testified on tax, tax accounting and regulatory tax matters before the
8 Florida Public Service Commission, New Jersey Board of Public Utilities, the
9 California Public Utilities Commission, the Connecticut Public Utilities Regulatory
10 Authority, Michigan Public Service Commission, and the Federal Energy Regulatory
11 Commission.

12
13 **II. PURPOSE OF TESTIMONY**

14 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?**

15 A. The purpose of my testimony is to explain how the accumulated deferred income tax
16 (“ADIT”) balances included as a component of Florida Public Utilities’ capital
17 structure for the purposes of its general rate case filing comply with the normalization
18 method of accounting as defined in Internal Revenue Code “IRC” 168(i)(9). I will also
19 provide support for the calculation of income tax expense included as a component of
20 Florida Public Utilities Company’s cost of service.

21

1 **III. THE NORMALIZATION METHOD OF ACCOUNTING**

2 **Q. CAN YOU PLEASE PROVIDE BACKGROUND ON WHAT TRIGGERS AN**
3 **ADIT BALANCE ON THE BOOKS AND RECORDS OF A REGULATED**
4 **COMPANY?**

5 A. ADIT arises from timing differences between the method of computing taxable
6 income for reporting to the IRS and the method of computing income for regulatory
7 accounting and ratemaking purposes. Generally, ADIT represents the accumulation of
8 deferred tax liabilities recorded on the balance sheet that captures the tax amount
9 attributable to temporary differences, driven by the different income recognition
10 requirements for tax reporting purposes and for financial statement or book accounting
11 purposes.

12
13 **Q. WHY DOES CONGRESS REQUIRE A PUBLIC UTILITY TO USE THE**
14 **NORMALIZATION METHOD OF ACCOUNTING?**

15 A. In 1954, Congress enacted a new tax law that provided for accelerated depreciation.
16 The primary motive behind the introduction of accelerated depreciation was to provide
17 a permanent investment incentive to business taxpayers. Because federal income tax
18 expense is included in a utility's cost of service for ratemaking purposes, some
19 regulatory agencies reduced the federal tax expense included in cost of service to
20 reflect the reduction in a utility's tax liability caused by accelerated depreciation, i.e.,
21 some regulators "flowed through" the tax benefit associated with accelerated
22 depreciation to ratepayers. As a result, the accelerated depreciation became a massive
23 federal utility subsidy to ratepayers as opposed to an investment incentive for the

1 utility. Moreover, the flow through of the benefits of accelerated depreciation to
2 ratepayers resulted in a loss of federal income tax revenues because the flow-through
3 reduced utility profits. To ensure that accelerated depreciation achieved its stated
4 purpose, Congress enacted the normalization rules in 1969, which permit a utility to
5 claim accelerated depreciation only if the utility complies with the normalization rules.

6

7 **Q. DOES CONGRESS MANDATE THE USE OF THE NORMALIZATION**
8 **METHOD OF ACCOUNTING?**

9 A. Yes, IRC Sec. 168(f)(2) provides that “public utility property” does not qualify for
10 accelerated depreciation if the taxpayer does not use a “normalization method of
11 accounting.” IRC Sec. 168(i)(10) defines “public utility property” as including
12 property used predominantly in the trade or business of the furnishing or sale of gas
13 through a local distribution system, and the transportation of gas by pipeline if a public
14 utility commission or other similar body establishes the rates for such furnishing or
15 sale. Therefore, while the Internal Revenue Code does not mandate any particular rate
16 treatment, it does limit the ability to use accelerated depreciation unless the utility uses
17 the normalization method of accounting.

18

19 **Q. CAN YOU DEFINE THE NORMALIZATION METHOD OF**
20 **ACCOUNTING?**

21 A. Yes, IRC Sec. 168(i)(9) defines the general requirements a taxpayer must meet to be
22 considered as using the normalization method of accounting. First, the taxpayer must
23 use (i) the same method of depreciation to compute both its tax expense and its

1 depreciation expense to establish its cost of service for ratemaking purposes and to
2 reflect operating results in its regulated books of accounting, and (ii) a recovery period
3 that is no shorter than the useful life is used in determining depreciation for ratemaking
4 purposes. Second, the difference between the actual tax expense computed using tax
5 depreciation and the tax expense determined for ratemaking purposes must be
6 reflected in a deferred tax reserve. Third, in determining the rate of return of a public
7 utility, the public utility commission may not exclude from the rate base an amount
8 that exceeds the addition to the deferred tax reserve for the period used in determining
9 the tax expense for ratemaking purposes. Fourth, the utility may not use an
10 “inconsistent” procedure or adjustment. A procedure or adjustment is “inconsistent”
11 if it employs an estimate or projection with respect to a utility’s (i) tax expense, (ii)
12 depreciation expense, or (iii) reserve for deferred taxes, unless such estimate or
13 projection is also used with respect to the other two items and rate base. If a taxpayer
14 fails to satisfy any one of these requirements, it ceases to qualify for accelerated
15 depreciation, and must compute depreciation using the straight-line method over the
16 asset’s regulatory life.

17

18 **Q. HOW DOES THE NORMALIZATION METHOD OF ACCOUNTING APPLY**
19 **IN THE RATEMAKING CONTEXT?**

20 A. A utility’s federal income tax expense is an element of the utility’s cost of service.
21 The first requirement of the normalization rules requires the utility to calculate the
22 federal income tax expense included in its cost of service using the same method of
23 depreciation it uses for financial statement purposes, i.e. straight-line depreciation.

1 The difference between the utility’s actual federal income tax expense and the federal
2 income tax expense included in its cost of service related to the use of accelerated
3 depreciation for federal income tax purposes is tracked in a deferred income tax
4 reserve account, commonly referred to as an ADIT account. Typically, the use of
5 accelerated depreciation results in a deferred income tax expense and a corresponding
6 deferred income tax liability, i.e., the current federal income tax payable is less than
7 the total federal income tax expense included in cost of service, which includes both
8 current and deferred income taxes. The deferred tax expense associated with
9 accelerated depreciation is equivalent to an interest free-loan from the Internal
10 Revenue Service. Because a utility is not permitted to earn a rate of return on cost-
11 free capital, the deferred tax liability reduces the utility’s rate base or is included as
12 zero-cost capital within the capital structure.

13

14 **Q. DOES THE IRS REQUIRE THE USE OF A SPECIFIC METHOD UNDER**
15 **THE NORMALIZATION RULES TO DETERMINE THE ADIT BALANCE**
16 **THAT SHOULD BE EXCLUDED FROM RATE BASE?**

17 Treasury Reg. Sec. 1.167-1(h)(6)(ii) provides the procedure for determining the
18 amount of the reserve for deferred taxes to be excluded from rate base (i.e., as no-cost
19 capital). Section 1.167(l)-1(h)(6)(ii) provides if, in determining depreciation for
20 ratemaking tax expense, a period (the “test period”) is used which is part historical and
21 part future, then the amount of the reserve account for this period is the amount of the
22 reserve at the end of the historical portion of the period and a pro rata amount of any
23 projected increase to be credited to the account during the future portion of the period.

1 The pro rata amount of any increase during the future portion of the period is
2 determined by multiplying the increase by a fraction, the numerator of which is the
3 number of days remaining in the period at the time the increase is to accrue, and the
4 denominator of which is the total number of days in the future portion of the period.
5 This is generally referred to as “the proration formula” or the “proration
6 methodology.”

7

8 **IV. THE APPLICATION OF THE PRORATION ADJUSTMENT TO FLORIDA**
9 **PUBLIC UTILITIES COMPANY’S ADIT BALANCES FOR THE PURPOSES**
10 **OF CALCULATING ITS RATE BASE**

11 **Q. CAN YOU DESCRIBE THE NATURE OF FLORIDA PUBLIC UTILITIES**
12 **COMPANY’S ADIT BALANCES?**

13 A. As mentioned previously, timing differences between the recognition of items of
14 income or expense for tax purposes versus financial statement accounting purposes
15 results in either a deferred tax asset or a deferred tax liability balance. Accelerated or
16 bonus depreciation is the most common example of a temporary difference that
17 generates a deferred tax liability. When accelerated depreciation is claimed by a
18 taxpayer, the depreciation expense deduction during the beginning of the assets useful
19 life is much larger than it is for financial statement reporting purposes. Because the
20 recognition of this expense is only an issue of timing and not amount, this difference
21 will eventually reverse over the course of the asset’s useful life, and the deferred tax
22 liability will be reduced accordingly. Alternatively, there are also instances where an
23 expense is recognized for financial statement or book reporting purposes but is not

1 fully allowed as a deduction for income tax purposes, resulting in a deferred tax asset.
2 The requirement that overhead expenses be capitalized to items of inventory and
3 deducted as a cost of goods sold once inventory is sold or consumed for income tax
4 purposes but not for financial statement reporting provides an example of a timing
5 difference that results in a deferred tax asset.

6 Florida Public Utilities Company's largest deferred income tax expense item is
7 attributable to what is referred to as "state decoupling." This occurs when a state does
8 not conform to certain federal tax provisions, and net income used to calculate the state
9 income tax differs from both the income reported for financial statement purposes and
10 the income reported for federal tax purposes as a result. The other primary driver of
11 Florida Public Utilities Company's ADIT balance is the temporary difference, or
12 deferred income tax expense, stemming from its recognition of tax depreciation versus
13 depreciation expense for financial statement accounting purposes. MFR Schedule C-
14 24 provides a complete listing of the deferred income tax expense items recognized by
15 Florida Public Utilities Company during the historical base year. Each of these items
16 contributes to the ADIT balances included on MFR Schedule B-18.

17

18 **Q. WERE THERE ANY ADJUSTMENTS TO THE HISTORIC TEST PERIOD**
19 **AMOUNTS TO ARRIVE AT THE PROJECTED TEST PERIOD AMOUNTS**
20 **INCLUDED IN FLORIDA PUBLIC UTILITIES COMPANY'S ADIT**
21 **BALANCES?**

22 A. MFR Schedule C-24 provides the detail related to the historic base year deferred tax
23 expense total, listing each item that contributes to the total timing difference between

1 net income for book purposes and net income for tax purposes. MFR Schedule G-2
2 provides the same for the historic base year +1 (i.e. year ending 12/31/2022) and the
3 projected test year (i.e. year ending 12/31/2023). As reflected in these schedules, the
4 timing differences are consistent in amount from the historic base year through the
5 projected test year for each item, with the exception of the depreciation timing
6 difference, included on each of the schedules under Line 3, and the “Deferred Only
7 Adjustment” reflected on Line 28. The amount attributable to both of these timing
8 differences is appropriately updated in the future and projected test periods based on
9 the information reasonably available at the time of this rate case filing.

10
11 **Q. CAN YOU DESCRIBE THE NATURE OF THESE ADJUSTMENTS, AND**
12 **HOW THE AMOUNTS WERE DETERMINED?**

13 A. The adjustment to the timing difference stemming from accelerated depreciation for
14 both the historic base year +1 and the projected test year is driven by projected
15 depreciation on existing assets for both book and tax purposes and estimates related to
16 planned or expected purchases and anticipated retirements during each of these
17 periods. Using this information, Florida Public Utilities Company’s calculated the
18 total projected tax and book depreciation for the projected and future periods and
19 included the difference in the deferred tax expense total for each year accordingly, as
20 reflected on MFR Schedule G-2.

21 Outside of the adjustment related to accelerated depreciation, the “Deferred Only
22 Adjustment” included MFR Schedule G-2, Line 28 was also updated for the future test
23 periods. This deferred tax expense item includes the yearly amortization of the

1 deferred tax liability recorded as part of the Florida Public Utilities Company
2 acquisition adjustment in accordance with Florida Public Service Commission Order
3 No. PSC-12-0010-PAA-GU, and the deferred tax expense associated with the
4 amortization of both the protected excess ADIT (i.e. subject to the normalization rules
5 and properly amortized using the average rate of assumption method) and the
6 unprotected excess ADIT resulting from the statutory rate change enacted as part of
7 the federal Tax Cuts and Jobs Act (“TCJA”). Because these totals for the future test
8 periods are known at the time of this rate case filing, they are properly adjusted to
9 reflect the projected deferred tax expense totals for the future test periods.

10

11 **Q. HOW DOES THE PRORATION REQUIREMENT IMPACT FLORIDA**
12 **PUBLIC UTILITIES COMPANY’S CAPITAL STRUCTURE FOR THE**
13 **PROJECTED TEST PERIODS?**

14 A. Florida Public Utilities Company calculated the proration requirement for the test year
15 ending 12/31/2023, and then compared the prorated ADIT balances to the 13-month
16 average ADIT balances per book. The result in both cases was a weighted average cost
17 of capital totaling 6.43%. Because the proration adjustment did not yield a change to
18 Florida Public Utilities’ capital structure, it was not included in the MFR schedules as
19 part of this rate case filing.

20

21 **V. THE CALCULATION OF INCOME TAX EXPENSE INCLUDED IN**
22 **FLORIDA PUBLIC UTILITIES COMPANY’S COST OF SERVICE**

1 **Q. HOW DID FLORIDA PUBLIC UTILITIES COMPANY CALCULATE THE**
2 **PROJECTED INCOME TAX EXPENSE?**

3 A. Florida Public Utilities Company used the historical timing differences between the
4 recognition of items of income or expense for book purposes and tax purposes to
5 estimate the timing differences for the projected test years. The projected net income
6 before income taxes and interest expense, less the interest expense calculated on the
7 cost of capital projections, adjusted for the anticipated timing differences was
8 multiplied by the effective tax rate to arrive at the total current tax expense.

9

10 **Q. HOW WAS THE EFFECTIVE TAX RATE USED TO CALCULATE**
11 **PROJECTED INCOME TAX EXPENSE DETERMINED?**

12 A. Florida Public Utilities Company uses an effective tax rate of 25.35%, which accounts
13 for both the applicable federal and state tax rates, which are 21% and 5.5%,
14 respectively. MFR Schedule G-2 provides specific details related to the calculation of
15 both state and federal income tax expense for the projected periods.

16

17 **Q. WERE THERE ANY ADJUSTMENTS INCLUDED IN THE TAX EXPENSE**
18 **CALCULATION FOR PERMANENT DIFFERENCES BETWEEN BOOK**
19 **INCOME AND TAX INCOME?**

20 A. As detailed on MFR Schedule C-23, Florida Public Utilities Company adjusted its
21 federal taxable income for the historic base year ending 12/31/2021, the historic base
22 year +1 ending 12/31/2022, and the projected test year ending 12/31/2023 to account
23 for book expense items that are not deductible for tax purposes, otherwise known as

1 permanent differences. These permanent items were consistent across each of the three
2 periods.

3

4 **Q. WERE ANY OTHER ADJUSTMENTS INCLUDED IN THE TAX EXPENSE**
5 **CALCULATION?**

6 A. Yes. As part of the TCJA, the corporate income tax rate was reduced from 34% to
7 21%. Because the ADIT reserves, which represent a future obligation to pay a future
8 tax liability, are determined and recorded based on the tax rate in effect at the time the
9 reserve balance is generated, the tax rate reduction resulted in the ADIT balances being
10 overstated by 13%. This excess ADIT resulting from the corporate tax rate decrease
11 can be broken out into two categories, protected and unprotected. “Protected” excess
12 ADIT stems from accelerated depreciation deferred tax balances, and the application
13 of the prescribed normalization method to reduce and return the excess ADIT back to
14 customers when computing cost of service for ratemaking purposes is required.
15 Alternatively, unprotected excess ADIT is not required to be normalized, and can be
16 amortized over any period sanctioned by the applicable regulators.

17 As it relates to the protected portion of excess ADIT, the normalization method of
18 accounting requires the use of the average rate of assumption method (“ARAM”) in
19 order to reduce the excess tax reserves in computing the cost of service for ratemaking
20 purposes. Under ARAM, the excess ADIT related to public utility property will be
21 amortized over the remaining life of the property at a rate that follows the reversal of
22 the deferred tax.

1 The unprotected portion of Florida Public Utilities Company’s excess ADIT is
2 properly amortized over a period of ten years, as approved by the Florida Public
3 Service Commission in Final Order No. PSC-2019-0076-FOF-GU, issued February
4 25, 2019, in Docket No. 20180051-GU (Florida Public Utilities Company –
5 Indiantown and Florida Public Utilities Company – Fort Meade are separate divisions
6 of FPUC. Docket Nos. 20180052-GU, 20180053-GU and 20180054-GU were opened
7 to address the tax impacts affecting FPUC – Indiantown, FPUC – Fort Meade, and
8 Chesapeake, respectively).

9 Schedule MFR C-18 provides detail related to the historic base year amortization of
10 the protected and unprotected portions of Florida Public Utilities Company’s excess
11 ADIT stemming from the statutory change in tax rates. This amortization expense is
12 accounted for in Florida Public Utilities Company’s pretax income and returned to
13 customers accordingly utilizing the average rate of assumption method for the
14 protected portion, and the 10-year period, consistent with the Florida Public Service
15 Commission’s Final Order referenced above, for the unprotected portion.

16

17 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

18 A. Yes, it does.
