Objection to Docket #20240032-SU

I am a property owner on Little Gasparilla Island, at 8676 King Street. I am writing to object to the proposed sewer service outlined in Docket #20240032-SU and to ask you to deny EU's application for wastewater service. My reasons are as follows:

1. **Unanticipated and grossly excessive cost burden during vulnerable, post-hurricane recovery.** My home at 8676 King Street on Little Gasparilla Island was extensively damaged in Hurricane Ian, had to be completely gutted, and only now is being repaired. I have not been able to use my home since Hurricane Ian and anticipate that this will continue at least through the remainder of the year. My insurance claims resulted in a settlement covering only part of the over \$300K cost of repairing my home. I am paying for the remainder of hurricane damage costs out of my retirement savings. **I am outraged that a private entity with no prior experience in sewage management can now use a public process, facilitated by elected but silent public office holders, who are not representing and did not solicit our views, to inflict an additional and perpetual cost, during this vulnerable rebuilding period.**
2. **No demonstrated need for service.** Expert witnesses at the last Administrative Hearing refuted arguments that EU put forward supporting the need for service. Our home is occupied less than 3 cumulative months per year (prior to Hurricane damage). We have a very functional septic system with a large mound drain field. Our location on the island occupies high ground. Our septic tank has not flooded in 25 years, including during the recent hurricane, which it survived without damage. I objected to the last proposal by EU, which was unsuccessful and I am grateful that the Commission saw fit to reject it as unnecessary and unwanted by residents. The present proposal is even more objectionable. **Charlotte County has not seen the need for a public sewer system on Little Gasparilla Island and has invested none of our property taxes to provide county infrastructure on the island. Why is this private for-profit utility allowed to assert a need that is inconsistent with County's plan, will disrupt the land for months with a messy installation, and impose considerable and perpetual costs on potential and unwilling customers?**
3. **No request for sewer service.** For the stated reasons in the prior paragraph, we are very satisfied with our present septic system, which was installed in the 1990s according to modern code, setbacks and permitting requirements. **We do not need a 12-month, private sewer**

system service with hook-up and ongoing service fees that are exorbitant, compared with public system costs elsewhere in Florida, for a home that generates effluent easily handled by a modern septic system.

4. **Environmental Utilities is a for-profit entity. This utility has no experience operating a sewer system.** Their experience is limited to operating a small-scale potable water facility. As mentioned above, **EU's installed water system has experienced periodic and recurring line breaks and urgent notices to customers that they need to boil water** (see attached email notices from the Utility). Periodic and recurring line breaks in a sewer system owned by the same private utility could be an environmental and public health disaster. We pay considerable property taxes to Charlotte County with little to no infrastructure assistance. **In the event of a failure of EU's proposed sewer, will Charlotte County commit to back up EU with taxpayer-funded infrastructure repair resources? EU has unproven emergency response funding or capabilities.**
5. **Environmental damage, creating new risks for sewage contamination.**
 - - **No septic-generated water contamination issue to address.** I am unaware of any water quality testing in the bay or gulf waters adjacent to LGI that has demonstrated the presence of coliform bacteria from residential septic system contamination. **If this is an ongoing problem, show me the data.**
 - - **In contrast, the EU-provided water service has had to issue boil water notices on several occasions due to line breaks. What is to prevent sewer overflow during the frequent power outages we experience on the island?** Sewer system line breaks would be just as likely, or even more likely to result in contamination. Furthermore, given that there is an electrically powered pump element in each residential hook-up, there is no electrical generator back-up system for individual customers proposed in EU's sewer application. As I understand the system's design, this would be the only way to ensure that the household hook-up powered elements would not overflow. **Island power outages will result in sewer overflow, while this does not occur with existing septic systems.**
 - - **Disruption of landscaping and habitat of our property's protected gopher tortoise.** The need for tunneling and digging to install the proposed sewer hook-up to my home will destroy the habitat of the endangered gopher tortoise that resides in my yard, which is completely landscaped with native shrubs and grasses.
6. **High, ongoing monthly cost burden to Island residents.** This latest attempt by Environmental Utilities to provide an unwanted, unneeded service, if successful, will **more than double my monthly utility costs.**
 - - **Private utility charges far exceed public utility charges.** I already pay a premium for the Utility's private water service, with high minimum monthly charges that exceed my water usage, for no additional benefit. The proposed monthly fees will more than double my monthly expenses and these expenses will continue even during the months

when I do not reside in my house and would not be using water or generating sewage effluent.

- - **Non-disclosed fees and expenses.** EU has not guaranteed that they will not pass on costs, above the hook-up fees, for additional electrical work or plumbing that they will claim is “unanticipated.”

This unwanted, unneeded service will represent a burdensome new tax that we will have no recourse but to pay. For the reasons I have outlined, and other compelling reasons that you will read in my neighbors’ comments, I urge you to respect our rights as citizens and taxpayers and reject the application by Environmental Utilities to provide wastewater service on Little Gasparilla Island.

Sincerely,
Robert A. Hoerr

Boil Water Notice 10/6/22

To Little Gasparilla Water Utility <lgwuoffice@gmail.com> • ashton boyer <ashtondboyer@gmail.com> • Jack Boyer <lwjd777@yahoo.com> Blind copy bobhoerr@comcast.net

BOIL WATER NOTICE **10/6/2022**

A Boil Water Notice is in effect until Charlotte County Utilities gives the all clear and our water samples on the island come back clear. Also, LGWU will be disinfecting the water lines over the next few days so please expect an increase in Chlorine smell.

For precautionary measures a lot of homes are shut off at the meter, so please check there first and call/text Ashton if there is an issue.

Our office is not usable at this time and our phone lines are down, but we are trying to proceed as normal. We will also try to respond to any calls, texts, or emails as soon as we possibly can.

Please watch for our notices via email, this website and Facebook. For any emergencies you can call or text Ashton at 941-626-8295 or Jack at 941-626-8294.

To: Office of Commissioner Clark; Office of Commissioner Fay; Office of Commissioner Graham; Office of Chairman La Rosa; Office of Commissioner Passidomo; Records Clerk
Subject: Docket #20240032-SU

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Dear Commissioner

This is a plea from a five generation Florida family lucky enough to discover a slice of old Florida called Little Gasparilla Island. My name is Penelope Jahna and we have owned property on Little Gasparilla Island since 2009, but we have been enjoying this little piece of grace poking out of the Gulf for over 40 years. Our plea is that you reject the proposed central sewer system.

If you have never been to this island you may not understand the unique environment and lifestyle of its residents. There is no bridge to get here and we like it that way. You can only access the island by boat. My husband likes to say "it's an island-island." That attribute creates its own issues with construction of any kind, both financially and logistically. But that characteristic helps to preserve the island as it is. There are no paved roads, only a few dirt paths, and some properties have no utility easements. The challenges of the island keep it from becoming overcrowded. While there are a few full time island families, most homes are vacant as much as they are occupied, which means volume of waste is not an issue. Even after Irma, Idalia and Ian, which were devastating to this location, there was no evidence for an environmental need for a sewer.

We are currently in the process of building our second Sanctuary on the island after our first was damaged beyond repair. The septic we are required to install is estimated to cost in excess of \$50,000, but it is made

to protect the environment. Should this proposal pass, I and every other resident who has installed a septic recently may well have flushed that cash right down the toilet as there is no plan for grandfathering of septic systems. According to EU estimates the installation fees of the proposed EU system are in excess of \$20,000 per household plus anticipated monthly charge of over \$250. This will certainly create a hardship on many families who have owned on this island for generations as well as new owners who just want to experience what it was like to live in the great state of Florida back before everything became automatic.

For these reasons, I urge you to reject the application for the sewer system on Little Gasparilla Island. My husband and I are formally requesting that the PSC deny the EU's application for wastewater service.

Subject: Docket # 20240032-SU

Being a property owner on Don Pedro Island for over 34 years (CDP #8 and 50 S Gulf Blvd), I hereby formally request that the PSC deny EU's application for wastewater services, based on the arguments in opposition to the proposed central sewer system as listed below.

There is no proven need for a central sewer system, nor did I request it. EU is a private, for-profit utility company with no experience in wastewater management. The proposed rates and expenses to homeowners are exorbitant and excessive.

This beautiful and peaceful island has been our family's place to unwind from the stress of daily living for, as I said, well over 30 years. We have come to love the wildlife that is part of our daily walks. There is something about seeing an endangered Gopher Tortoise walking ever so slowly, and stopping to feed on grasses, that adds to the tranquility of this island paradise. We are also fortunate to have other endangered species on this tiny island such as the Indigo snake. We have armadillos, iguanas, rabbits and a large variety of birds too numerous to mention. This small barrier island is home to more than just the people who take care for and respect these beautiful creatures.

The amount of heavy equipment, manpower and noise pollution, as well as the digging of trenches for who knows where and for how long, will no doubt cause stress to all wildlife, some of which may leave the island permanently.

Other concerns for owners on the island have to do with the disruption this will cause the vacation rental situation. The majority of owners depend very heavily on rental income to cover costs such as enormous insurance and property tax bills as well as general maintenance costs.

It has taken some of us well over a year and a half to recover from Hurricane Ian. Some are still in the process of recovery. If another hurricane hits the island, what will that do to a sewer system? Is this company financially able or qualified to handle such emergencies? This is a very fragile barrier island. Building homes on the island probably isn't what the good Lord had in mind when he created it for a

"barrier" to protect the mainland. Digging deep trenches and putting a sewer line throughout these sandy roads, I believe, would cause more harm than good.

All property owners maintain their individual septic systems on a regular basis. The additional financial burden to each of us that this project would bring would cause many to give up what have been their dream homes for many years. I believe that the owners of this venture are looking at the possibility of making a lot of money at others' expense. I have been unable to find out about the experience this company has in the wastewater business, or backing it has to be financially sound in case of extreme emergencies. Unless, of course, they plan to pass that on to someone else.

Therefore, based on the arguments above, I hereby formally request that the PSC deny the EU's application for wastewater services.

Sincerely,
Richard Collett

Subject: RE. Docket #20240032-SU

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

From Laurie Barclay, MD, property owner on Don Pedro Island (Colony Don Pedro unit #8; 50 S Gulf Blvd.)

I hereby formally request that the PSC deny EU's application for wastewater service, based on the arguments in opposition to the proposed central sewer as listed below.

As a property owner on Don Pedro Island for more than 30 years, I firmly believe that it is a unique treasure, reflecting unspoiled Florida at its finest. It is a pristine environment and beautiful, idyllic location bringing much needed peace and restoration to our hectic, troubled world.

In these 30 years, I have never had issues with my current septic system, nor has any water quality testing indicated a need for sewer. I have the current septic system maintained regularly. I did not request a sewer system, nor have any of my neighbors, to my knowledge.

The proposed central sewer would be extremely disruptive to our environment and way of life. The noise and disturbance of sand and soil by installing the proposed system would be devastating to wildlife, human residents and visitors, and the natural beauty of our beloved island. Installing and maintaining a sewer system may destroy the natural habitat and interfere with the gopher tortoise and other endangered native species.

Sewage spill in the Intracoastal could be devastating to fish and sea turtles, as well as to human life by encouraging red tide and potential infection from contact with coliform bacteria in the water: The risk of a central sewer leak with a subaqueous crossing exceeds the risk of one or more septic systems developing leaks.

I am also extremely concerned regarding the proposed high costs of wastewater service. I rent out my property when possible and enjoy it myself the rest of the time. As a retired senior, the costs of island living are substantial already, and the proposed system would inflict an unnecessary financial burden of upfront and ongoing costs.

The extent of this burden is uncertain, with estimated connection fees ranging from \$13K to \$20K; the requirement of installing an electrical panel at my expense; the need to buy and maintain a generator to avoid sewage back-up during power outages; removal of trees, landscaping and hardscaping around the septic area at my expense; and monthly fees in the range of \$200, or approximately twice the amount paid on the nearby mainland for water and wastewater combined, and far exceeding my current sewage-related expenses.

As the grinder pump has a limited capacity of 60 gallons, and will be unable to function for long if there is a power outage, each property would need a generator to keep the system running and avoid sewage back-up. Again, more unnecessary expense, inconvenience, noise, storage, and potential fire and environmental hazard of storing gas.

To gain access to crush and fill the septic tank, landscaping, trees and structures around the septic area would have to be cleared at my expense, which would disrupt the environment and wildlife, disfigure my property, and take away useable outdoor recreational and parking space.

In any event, these are additional expenses I cannot afford, at no benefit whatsoever to me, my renters, or my neighbors. In fact, the only beneficiary of the proposed sewer system is EU itself. Even worse, there is no pay-over-time plan, so that a loan (and associated interest and negative impact on credit rating) could be needed to cover connection cost.

The pandemic and Hurricane Ian have created enough economic and other disruption to our way of life, and imposing the expenses of a sewer system could put me over the edge of having to give up island living that I so dearly love. We are already at risk with an anticipated more active than usual hurricane season, and likely failure of the sewer system during a storm imposes unnecessary additional economic and other hardship.

No renters want to have their time away spoiled by sewer system installation, with the associated noise, inconvenience, and increased local and barge traffic, nor do I. Increased traffic, and delays waiting to get on the barge to access or leave the island could continue for years and would further detract from the joys and peace of island living. The proposed system would therefore negatively impact Florida tourism and hospitality industries on the island and nearby mainland.

In addition, I view the EU's proposal for a sewer system as offensive, as it is an infringement of my personal rights and my rights as a property owner. The septic system in current use works perfectly well, and I cannot understand why I should be forced to change it, as said change would be harmful to me for reasons expressed herein.

Unfortunately, however, should the sewer system proposal be approved, connection would be mandatory. Charlotte County regulations require all homes to connect to central water and wastewater within 1 year of availability, with no grandfathering of septic systems, regardless of age or condition.

As EU has claimed ownership of a utility easement going from the sewer equipment near the house to the connection in the road, without compensation to homeowners, their proposed system would lower property values at no benefit to us.

The proposed sewer system has no accountability, as EU is not a contractor that has won a bid to install the sewer, and there is no "contract," no single point of general oversight, no performance bond required, and no single point of recourse for homeowners should there be cost overruns or project failure. EU is a private, for-profit company with no experience in wastewater utility management.

Furthermore, EU has not addressed how the sewer would be serviced if it fails during storms, which are frequent on tropical islands. Another concern of island living is the corrosive effect of salt air on mechanical and electrical equipment, resulting in the need for frequent replacement of sewer components, again at the expense of the homeowner.

Based on the arguments above, I hereby formally request that the PSC deny EU's application for wastewater service. These arguments include, but are not limited to, negative impacts on the environment, island living, Florida tourism and hospitality industries, property rights, and homeowner expenses. Please do not destroy our beautiful island and the oasis of tranquility it provides.

Sincerely,

Laurie Barclay, MD

RE: Docket # 20240032-SU

Dear Clerk Of The PS Commission and Commissioners,

We, property owners at 8942 Gulf Street on Little Gasparilla Island, submit this letter to voice our strongest opposition to the Environmental Utilities LLC proposal for a central sewer system.

We oppose the central sewer proposal for the following reasons (and more):

*it's a "fix" for a problem that does not exist - the overwhelming majority of LGI owners are not utilizing their property full time, thus, there is no burden of excess sewage that warrants anything more than the septic systems currently in place.

*its destructive environmental impact will harm the local flora and fauna. Owners will be forced to cut down mature trees to accommodate the installation and maintenance of the equipment. The habitat of already endangered species will be forever altered.

*it violates the 5th Amendment to the US constitution, which protects private property rights. Owners would be forced, at their own expense, to grant "all rights, easements, permits and privileges" to EU for construction and maintenance of the system. In other words, we will be forced to pay for something we don't need and don't want and will cede legal rights, in perpetuity, through force.

Little Gasparilla Island property owners are already stretched to the limit economically...many are still dealing with the fall out of Hurricane Ian...the central sewer project offers benefit to one company at the ongoing expense of all owners. It's unjust, unfair, unneeded and economically burdensome.

Please stop this project, for once and for all. Please deny Environmental Utilities LLC application for wastewater service.

Thank you.

Sincerely,

Jennie Freiman / Stuart Mendel
8942 Gulf Street. (Little Gasparilla Island) Placida, FL 33946
Email: iterating@pm.me

PS. I previously sent this letter on 4.10.24 from iterating@pm.me, but never received confirmation of receipt. I am re-sending the letter from a different email, in case my previous attempt ended up in your spam folder, Please send an email confirmation that you received this. Thank you!

sroth61@verizon.net

04/20/2024

FLORIDA PSC

Subject: Docket #20240032-SU

Dear Commissioner,

My name is Sharon Roth and I own 40 Gasparilla Way on Don Pedro Island. I am formally requesting that the PSC deny the EU's application for wastewater server. I am concerned that the issue of the central sewer system is being reviewed again. I am against this as I was a couple of years ago for the same reasons. I will list some of the reasons for concern.

Our islands are in a rural service area which mandates on site septic systems to reduce development.

There is no quality water testing proving that it is needed, and the project would have the potential of destruction of natural habitat for endangered gopher turtles.

The islands are not easy to access during weather emergencies which with a central sewer system would cause environmental impacts that our current septic systems would not.

Our island has ferry access which is utilized about to it maximum, and it was after Ian and Little Gasparilla has no scheduled means of access for large equipment. This would be a major nightmare for several years for something that is not needed or necessary for a private company to make a fortune on the people of the barrier islands.

Most homes on the islands are part time residence or vacation rentals and do not have the sewer load that a full-time residence does on the mainland.

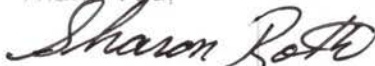

The rates that a proposed for service are excessive. I owed a home in the Florida Keys up to last year and my Quarterly water and sewer bills averaged \$400. Our base water on the island is over \$70.00 per month and the proposed sewer bill is estimated at \$200.00 per month. We don't need another private company charging us exorbitant rates.

The person involved in this is also the owner of the water company on Little Gasparilla and has difficulty operating it and has no experience in a central sewer system.

The cost of this to the residence of the island are excessive and most of the islander have not even recovered fully from the impact of hurricane Ian. If the system would be install there is numerous cost that aren't even address such as longevity of some of the system due to the exposed environment, the upgrades that may need to be made at the homes for the installs, what needs to be done for loss of electricity so there are no spills (doesn't happen with septic systems).

It is time for this to be tabled and put your energy into an area that a central sewer system is needed and would benefit the people and not a few that just want to make money.

Thank You,

Sharon Roth

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

I am a full time Florida homesteaded resident - 540 South Gulf Blvd - Preserve Don Pedro - Don Pedro Island cherylbethklaus@hotmail.com

I am asking the PSC to deny EU's application for wastewater service for the following reasons:

1. A central waste water system has not been proven to be necessary.
2. Environmental Utilities has no experience with installing a waste water system. This is a barrier island and as such has a unique ecological environment and soil complexity.
3. Cost: EU is putting forth a \$13,511.00 hook up fee and an initial deposit of \$414.00 - all for a system that is not needed now nor in the foreseeable future. These are the basic costs - not including installation of an electrical panel by a licensed electrician - said cost to be born by home owner - again all for an unnecessary system. Further, in the event of power outage, the pump has a small capacity and then everyone gets sewage backup and/or overflow causing severe environmental damage.
4. In the event the County should determine that there at some point is a need for a central system, it is incumbent upon the County to install such system and not farm out its responsibility to a private company.
5. Does EU have the financial ability to carry out what they are proposing?
6. There are protected species on this barrier island. Installation of a system that is not needed by a private company with no experience is a road to disaster.

Subject: Docket #20240032-SU

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Dear Commissioner Graham:

As an owner of three properties on Don Pedro/Palm Island I am requesting the PSC deny the EU application for wastewater service.

I cannot believe that this is even being considered given that our current septic system has worked great over the years and currently we have no monthly fees. I am aware of issues where (St. Petersburg) sewer systems will back up and sewage will go in the roads and the Gulf. I have never heard of any issues with septic spillage for the over 37 years we have enjoyed Palm Island.

It appears to me that certain people are pursuing this project only for profit at the expense of exploiting all the residences of Don Pedro/Palm Island with unnecessary hook up charges and monthly fees. **I do not see how anyone on the Commission would even consider adding to the financial burden for costs to replace something that is working fine** unless they too are receiving a kick-back. Even considering awarding this project to Mr. Boyer, who is inexperienced in sewer, and can provide no actual costs or monthly fees for this is inconceivable at best. Just because the resort's septic is aging and needs to be replaced, let them update and replace their own. All the residents on Don Pedro should not have to pay. **Please represent the people of Don Pedro Island and don't make people pay for something that is not needed to represent the financial benefit of a few.**

Thank you
