Executive Summary

In accordance with Rules 25-17.0021-.005, Florida Administrative Code, the Florida Public Service Commission (PSC) must establish numeric conservation goals for Orlando Utilities Commission (OUC). OUC is submitting proposed numeric conservation goals and the associated demand side management (DSM) plan to the PSC for approval. The development of the goals and conservation plan required thorough analysis and multiple steps.

First, potential DSM measures were compiled. In order to reduce cost, OUC did not evaluate each possible measure. Instead OUC focused on measures that had the highest potential for being cost-effective.

Inputs and assumptions were developed for the potential DSM measures as well as for the economic parameters and the avoided supply side unit. This data was input to a PSC approved model to evaluate the cost-effectiveness of the measures. Cost-effectiveness was determined by running three tests. The three tests run were the Rate Impact Test, the Total Resource Test, and the Participants Test.

OUC requires all measures to pass the Rate Impact Test to be considered cost-effective. From these results, numerical goals were developed for the ten-year period 2001 – 2010.

Of the potential DSM measures tested, none passed the Rate Impact Test. Since every measure failed the cost-effectiveness testing, the proposed numeric goals for residential and commercial and industrial are zero.

Recent Need for Power Dockets for Kissimmee Utility Authority (KUA) and Florida Municipal Power Agency (FMPA) for Cane Island Unit 3 (Docket No. 980802) and the City of Lakeland conversion of McIntosh Unit 5 to combined cycle (Docket No. 990023) evaluated dozens of DSM measures for similarly situated municipal utilities and also found no DSM measures were cost-effective.

Many things have changed since OUC's 1995 goals that tend to decrease the cost-effectiveness of DSM. The efficiency of new generation has increased. The cost of installing new generation has decreased. Fuel costs and fuel cost projections have decreased. Interest rates have fallen. All of these things have resulted in it becoming more difficult for DSM measures to be cost effective.

Because OUC views energy efficiency so importantly, OUC proposes to continue existing programs that have shown high participation and customer demand. The programs are focused on energy efficiency and conservation.

OUC will continue to consider a broad range of residential, commercial and industrial measures to assist OUC customers in the reduction of energy and demand and will continue to monitor the cost-effectiveness and value of these measures.

1.0 Introduction

In accordance with Rules 25-17.0021-.005, Florida Administrative Code, the Florida Public Service Commission (PSC) must establish numeric conservation goals for Orlando Utilities Commission (OUC). Each utility subject to the rule is required to propose numerical goal projections for the ten-year period 2001-2010. The PSC has initiated Docket 990722 – EG to implement the requirements of Rule 25-17.0021 - .005 for OUC. In response to this docket, OUC is submitting proposed numeric conservation goals and the associated demand side management (DSM) plan to the PSC for approval in this report.

In order to reduce cost, OUC did not model each possible DSM measure. OUC's study focused on alternatives that are expected to have the highest potential for being cost-effective. The DSM measures analyzed were compiled from programs deemed cost-effective in OUC's 1995 Demand Side Management Plan, existing OUC measures, and the most cost-effective measure evaluated by Florida's largest investor owned utility, Florida Power & Light.

By testing the most cost-effective measure from FPL, the assumption was made that if the most cost-effective measure for FPL did not prove cost-effective, then FPL's lesser cost-effective measures would also fail the analysis. Using this methodology, OUC has effectively screened all of FPL's measures.

Each potential measure was evaluated using the PSC approved Florida Integrated Resource Evaluator (FIRE) model providing the Rate Impact Test, the Total Resources Test, and the Participant Test. The model evaluates the economic impact of existing and proposed conservation measures by determining the relative cost effectiveness of the measures versus the avoided unit. Based on the cost effectiveness analysis, OUC proposed conservation goals and a corresponding demand side management plan.

This report contains seven sections. The next section presents the overall methodology used to develop the proposed numeric goals and supporting demand side management plan. The third section describes all inputs and assumptions associated with the potential DSM measures, avoided supply side generation and economic parameters. The fourth section describes the methodology and explanation of the results for the cost-effectiveness testing and analysis. The fifth section discusses the numerical results of the analysis. The sixth section describes the development of the proposed numerical

**Orlando Utilities Commission
Adoption of Numeric Conservation Goals
Docket 990722**

Introduction

conservation goals. The seventh section describes OUC's proposed demand side management plan.

2.0 Methodology

Several steps were involved in the development of numeric conservation goals and the associated demand side management plan.

First, potential DSM measures for cost-effective analysis were selected. In order to reduce cost, the measures were chosen carefully. OUC did not model each possible DSM measure. Instead, OUC's study focused on alternatives that were expected to have the highest potential for being cost-effective. The DSM measures analyzed were compiled from programs deemed cost-effective in OUC's 1995 Demand Side Management Plan, existing OUC programs, and the most cost-effective measure that was found to be cost-effective by Florida's largest investor owned utility, Florida Power & Light. The potential DSM measures evaluated are listed in Table 3-1.

Second, each potential measure was evaluated for its cost-effectiveness. Measures were evaluated using the PSC approved Florida Integrated Resource Evaluator (FIRE) model which provides output in the form of the Rate Impact Test, the Total Resources Test, and the Participant Test. The model evaluates the economic impact of existing and proposed conservation measures by determining the relative cost effectiveness of the measures versus an avoided supply side resource. The avoided unit is the next unit planned for installation for the utility. FIRE Model methodology is discussed in Section 4.0. Avoided unit assumptions are discussed in Section 3.3.

Third, based on the cost effectiveness analysis, numeric conservation goals were developed. The numeric goals were calculated based on the demand and energy saved by the cost-effective measures. The results of the cost-effective analysis are listed in Table 5-1. The proposed numeric goals are listed in Table 6-1.

Fourth, a conservation plan was developed. Although OUC proposes zero goals, OUC proposes to continue existing conservation programs. The proposed DSM plan is described in Section 7.0.

3.0 Assumptions and Inputs for Cost-Effective Analysis

3.1 Demand-Side Management Measures

The DSM measures tested were taken from three sources: OUC existing DSM measures, measures proposed in OUC's 1995 DSM Plan, and the most cost-effective measure from Florida Power & Light's (FPL) 1999 goals. Each measure and its original source are listed in Table 3-1.

Basic assumptions were made in the development of input data for the measures. The sources for assumptions applying to all measures are shown in Table 3-2.

**Table 3-2
Source for Data Input Assumptions for DSM Measures**

- Study Period for economic evaluation set to 20 years.
- Fuel Forecast and economic parameters were taken from OUC's 1999 Ten Year Site Plan.
- OUC 1999 Utility average system fuel cost of 1.93 cents/kWh was taken from Resource Data International Inc. and escalated at 3.17 percent to 2001\$.
- Non-fuel cost in residential customer bill for 1999 is 5.62 cents/kWh (5.95 cents/kWh (2001\$)) based on monthly Typical Electric Bill Tabulation for 1,000 kWh users (Florida Municipal Electric Association Inc.).
- Non-fuel cost in commercial customer bill for 1999 is 5.14 cents/kWh (5.45 cents/kWh (2001\$)) based on monthly Typical Electric Bill Tabulation for 30 kW – 6,000 kWh users (Florida Municipal Electric Association Inc.).
- Customer Demand Charge for 1999 of \$6.5 /kW/month (\$6.9/kW/month (2001\$)) per OUC.
- Transmission Capital Costs of \$78.78/kW (2001\$) were taken from FPL's 1999 goals
- Transmission Fixed O&M costs of \$3.08/ kW/ Year (2001\$) were taken from FPL's 1999 goals.
- Distribution Capital Costs of \$56.28/kW (2001\$) were taken from FPL's 1999 goals.
- Distribution Fixed O&M Costs of \$14.64/kW/Year (2001\$) were taken from FPL's 1999 goals.

Input data for these measures was compiled from Annual FEECA Reports, OUC's 1995 DSM Plan, OUC's 1999 Ten Year Site Plan, FPL's testimony (Docket 971004-EG) and FPL's supplemental responses for FPL's 1999 Ten Year Site Plan as well as other data provided by OUC. The number of participants for the FPL measure was developed by the ratio between OUC's and FPL's number of customers. The input data used in the FIRE Model is shown in Appendix B

3.2 Economic Parameters

The economic parameters used in the evaluation were obtained from OUC's 1999 Ten Year Site Plan and are presented in the following subsections.

3.2.1 Inflation and Escalation Rates

The general inflation rate is 3.0 percent annually. The 3.0 percent is applicable to capital costs, operations and maintenance (O&M) expenses, and various other expenses. Escalation rate for fuel costs is 3.17%.

3.2.2 Present Worth Discount Rate

The present worth discount rate applied in the study is equal to the bond interest rate of 5.5%.

3.2.3 OUC Municipal Bond Interest Rate

The long-term municipal bond interest rate is assumed to be 5.5 percent. This rate is based on the current bond rate for OUC.

3.2.4 Interest During Construction Interest Rate

The interest during construction interest rate for OUC is assumed to be equal to the bond rate of 5.5 percent.

3.2.5 Fixed Charge Rate

Based upon a 2.0 percent issuance fee, 1.0 percent annual insurance cost, a bond interest rate of 5.5 percent, and a bond term of 25 years, the annual fixed charge rate is 8.78 percent.

3.3 Avoided Unit

Per OUC's 1999 Ten Year Site Plan, OUC's expansion plan does not require unit additions for the time period of 1999 through 2008. There has been a major change since the submittal of the 1999 Ten Year Site Plan. OUC has sold its Indian River steam units to Reliant. Under this agreement, OUC will purchase power generated from Indian River for four years. At the expiration of the four-year contract, OUC maintains the option of signing a second four-year contract.

OUC will thus have an option of building new generation to be in service when the initial purchase power term expires. For purposes of determining an avoided unit for the DSM evaluations, a new combined cycle has been selected with an in service date that matches the expiration of the first term of the purchase power contract. This represents a conservative choice for an avoided unit. If the optional term of the purchase power

contract is lower in cost than the avoided unit, then DSM measures that are evaluated against the avoided unit will be less cost-effective. On the other hand, if the avoided unit represents the least cost alternative, then the DSM measures will be properly evaluated.

The estimated capital cost for the combined cycle and its projected performance is presented in Table 3-3.

**Table 3-3
Generating Unit Characteristics
For Avoided Unit**

Item	General Electric 7FA 2 x 1 Combined Cycle
Total Capital Cost, 2001 \$1,000 (1)	\$ 208,003
O&M Cost-Baseload Duty	
Fixed O&M Cost, 2001 \$/kW-y	5.00
Variable O&M Cost, 2001 \$/MWh	1.94
Economic Life	25
Net Plant Capacity (MW) @ ISO	529
Net Heat Rate @ ISO (HHV)	6,704
Equivalent Availability, percent	92.5
Equivalent Forced Outage Rate, percent	4.2
Planned Maintenance Outage, weeks/y	3
Construction Period, months	24

(1) Does not include interest during construction.

4.0 Cost-Effective Analysis

Each potential measure was evaluated for its cost-effectiveness. Measures were evaluated using the PSC approved Florida Integrated Resource Evaluator (FIRE) model which provides output in the form of the Rate Impact Test, the Total Resources Test, and the Participant Test. The model evaluates the economic impact of existing and proposed conservation programs by determining the relative cost-effectiveness of the programs versus the avoided supply side resource. The avoided unit is the next unit planned for installation for the utility. Based on the cost effectiveness analysis, numeric conservation goals are developed.

4.1 FIRE Model Methodology

In order to evaluate the cost-effectiveness of all existing and potential DSM measures in the reporting format specified by the PSC, the Florida Integrated Resource Evaluator (FIRE) model was used. The FIRE model was designed by Florida Power Corporation and is used by several utilities in Florida. The model evaluates the economic impact of existing and proposed conservation measures by determining the cost effectiveness of the measures versus the avoided unit. Assumptions inherent in the FIRE Model are listed in Table 4-1.

The FIRE Model was designed to evaluate a wide variety of DSM measures. The model uses avoided unit costs, DSM measure costs, operations and maintenance costs, rebates/incentives, and other input variables to calculate the incremental benefits of a DSM measure. These incremental costs are used to perform three cost-effectiveness tests: the Rate Impact Test, the Total Resources Test, and the Participant Test.

4.2 FIRE Model Output

FIRE Model results are output in the form of three cost-effectiveness tests. All the DSM cost effectiveness tests are based on the comparison of discounted present worth benefits to costs for a specific DSM measure. Each test is designed to measure costs and benefits from a different perspective.

The Rate Impact Test is a measure of the expected impact on customer rates resulting from a DSM program. The test statistic is the ratio of the utility's benefits (avoided supply costs and increased revenues) compared to the utility's costs (program

costs, incentives paid, increased supply costs and revenue losses). A value of less than one indicates an upward pressure on rate levels as a result of the DSM program.

The Total Resources Cost Test measures the benefit / cost ratio by comparing the total program benefits (both the participant's and utility's) to the total program costs (equipment costs, supply costs, participant costs).

The Participants Test measures the impact of the DSM program on the participating customer. Benefits to the participant may include bill reductions, incentives paid, and tax credits. Participants' costs may include equipment costs, operation and maintenance expenses, equipment removal, etc. The Participants' Test is important because customers will not participate if the program is not beneficial to them.

All three cost effectiveness tests were calculated for each DSM measure analyzed and considered in our evaluation. OUC views the Rate Impact Test as the primary test for determining the cost effectiveness for DSM measures for its system.

**Table 4-1
FIRE Model Assumptions**

- System demand is growing. Demand reductions due to DSM will result in reduced need for system expansion.
- Individual demand reductions can be related to reduced need for system generation expansion.
- The generation reduction will be evaluated with respect to specified generation.
- Decreases or increases in revenue due to demand side programs will impact rate levels and will be passed on to all customers.
- Additional conservation taking place after the next deferred generating unit will affect subsequent units.

5.0 Cost-Effective Analysis Results

5.1 Numerical Results

The numerical results from the FIRE Model analysis are listed below in Table 5-1. Descriptions of the measures are listed in Table 3-1 of Section 3.

Table 5-1
FIRE Model Results

Abbr.	DSM Measure	Cost-Effectiveness Test Rating		
		Rate Impact	Total Resource Cost	Participant Costs
<u>Residential</u>				
REnSur	Energy Survey	0.22	1.05	1.00
HPump	Heat Pump	0.79	0.24	0.28
Weath	Weatherization	0.34	1.48	11.62
LIncome	Low Income Energy Fix-up	0.19	0.25	1.00
EWaterH	Efficient Water Heating	0.72	0.54	0.75
DLC - 1	Direct Load Control - Main	0.99	1.75	1.00
DLC - 2	Direct Load Control – Pool Pumps	0.52	0.74	1.00
<u>Commercial/Industrial</u>				
CEnSur	Commercial/Energy Survey	0.42	11.64	1.00
CEL	Commercial Lighting	0.35	0.35	1.01
CCool	Commercial Cooling	0.30	1.86	1.00
OPBC	Off Peak Battery Charging – FPL	0.43	0.65	1.51

5.2 Analysis of Results

Although every DSM measure failed the Rate Impact Test, OUC proposes the continuation of select conservation measures. OUC views energy conservation as an important service to OUC customers and the community. By continuing conservation

programs, OUC maintains interaction with customers and is better able to determine the needs of OUC's customers and the community.

OUC proposes to continue the following residential and commercial/industrial conservation programs and measures:

Residential:

- Residential Energy Survey
- Residential Heat Pump
- Residential Weatherization
- Residential Low Income Home Energy Fix-up
- Residential Educational Outreach Program

Commercial/Industrial:

- Commercial Energy Survey Program

The Educational Outreach Program was not tested because it is an educational program for children. Each of the proposed programs is described in detail in Section 7.0.

6.0 Proposed Numeric Conservation Goals

The proposed numeric conservation goals for OUC are based on the FIRE Model results for the Rate Impact Test. No residential or commercial or industrial measures were found cost-effective for OUC customers. OUC's numeric proposed conservation goals are shown in Table 6-1.

**Table 6-1
Proposed Numeric Conservation Goals**

Year	Residential Reduction			Commercial/Industrial Reduction		
	Summer kW	Winter kW	MWh	Summer kW	Winter kW	MWh
2001	0	0	0	0	0	0
2002	0	0	0	0	0	0
2003	0	0	0	0	0	0
2004	0	0	0	0	0	0
2005	0	0	0	0	0	0
2006	0	0	0	0	0	0
2007	0	0	0	0	0	0
2008	0	0	0	0	0	0
2009	0	0	0	0	0	0
2010	0	0	0	0	0	0

Although none of measures passed the Rate Impact Test to qualify as cost-effective, OUC proposes the continuation of OUC's existing programs. The programs are described in Section 7.0.

7.0 Existing Demand Side Management Programs

7.1 Residential Programs

7.1.1 Residential Energy Survey

7.1.1.1 Program Description. This program is designed to provide residential homeowners with recommended energy efficiency measures and practices. The Residential Energy Survey includes complete attic, air duct and air return inspections. Literature on other OUC programs is also provided to the residential customers. The customer is given a choice to receive a low-flow showerhead or compact fluorescent bulb. OUC Energy Analysts are presently using this walk-thru type audit as a means to get OUC customers to participate in other conservation programs and to qualify for appropriate rebates.

7.1.1.2 Program Participation. Participation has averaged over two-thousand energy surveys per year for the past ten years. Feedback from customers that have taken advantage of the survey has been very positive. Residential homeowners are encouraged to participate in this program.

7.1.1.3 Program Benefits. One of the primary benefits of the program is providing education to the customer on energy conservation measures and ways their lifestyle can directly impact their use of energy. Customers will be able to participate in conservation measures that they otherwise might not have been aware. Customers will benefit from the increased energy conservation in their home, which will decrease their electric bills.

7.1.1.5 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community even though not found cost effective.

7.1.2 Residential Heat Pump Program

7.1.2.1 Program Description. This program is designed to minimize thermal losses due to ductwork and insulation. Heat pumps are marketed to the owners of existing residential strip heating systems and older, inefficient central air conditioners and heat pumps. Contractors often install energy efficient heat pumps plus duct repairs and additional insulation as a part of a total energy saving package for customers.

7.1.2.2 Program Participation. Owners of existing residential strip heating systems and older, inefficient central air conditioners are the focus. The program requires heat

pumps with a SEER of 11 (or greater) and a HSPF of 7.0 (or greater) in order to qualify for rebates.

7.1.2.3 Program Benefits. Customers will be able to obtain rebates in terms of equipment SEER levels, tonnage and replaced equipment. Customers will benefit from the increased energy conservation in their home, which will decrease their electric bills.

One of the main benefits of this program is the duct work and insulation level improvements made by contractors when installing the energy efficient heat pumps.

7.1.2.4 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community even though not found cost effective.

7.1.3 Residential Weatherization Program

7.1.3.1 Program Description. This program is designed for existing single family homes and promotes R-19 ceiling insulation (or higher), caulking, weather-stripping, window treatment, water heater insulation and air conditioning heating supply and return air duct repair.

7.1.3.2 Program Participation. This program targets existing single family homes through Residential Energy Surveys, trade shows, exhibits, and neighborhood meetings.

7.1.3.3 Program Benefits. Customers will benefit from the customized weatherization of their homes, which will decrease their electric bills.

Customers are eligible for a \$140 rebate for R-19 ceiling insulation, \$100 rebate for duct repairs and up to \$110 for other conservation measures specified above. In addition, the customer is allowed to carry payments for ceiling insulation on their electric bill for 12 to 24 months. OUC directly pays the total contractor cost for insulation when OUC provides the financing.

7.1.3.4 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. Even though not found cost-effective, OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community.

7.1.4 Low Income Home Energy Fix-up Program

7.1.4.1 Program Description. This program targets low-income residential customers, customers with an annual income of less than \$20,000. Every customer is eligible for an energy audit. Audit recommendations usually require the customer to spend money replacing or adding energy conservation measures. Low-income customers may not have the discretionary income to make these changes.

The program pays 85 percent of the total contract cost for home weatherization for the following measures: upgrading ceiling insulation to R-19, exterior and interior caulking, weather-stripping doors and windows, air conditioning / heating supply and return air duct repairs and water heater insulation. The purpose of the program is to reduce the energy cost for low income households, particularly those households with elderly persons, disabled persons, and children, by improving the energy efficiency of their homes and ensuring a safe and healthy community.

7.1.4.2 Program Participation. Low-income residential customers are encouraged to participate.

7.1.4.3 Program Benefits. Customers will be able to participate in conservation measures that they might not be able to otherwise afford. Eighty-five percent of the bill is picked up by OUC, the other 15 percent can be financed on their monthly electric bill. Low-income customers will benefit from the customized weatherization of their homes, which will decrease their electric bills.

OUC will be helping to lower the bills of low-income customers who may have more difficulty paying their bills. Reducing the bill of the low-income customer may improve the customers ability to pay the bill, thereby decreasing costly service disconnect fees and late charges. OUC believes this will help to achieve and maintain high customer satisfaction.

7.1.4.4 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community even though not found cost effective..

OUC has agreed in a Memorandum of Understanding with the State Department of Consumer Affairs dated March 17, 1995 to continue this program.

7.1.5 Educational Outreach Program. This program is now entering its 15th year of operation. The program is very successful and has won several awards for contributions to education. The program consists of hour long classroom presentations focused on teaching students about energy and water conservation. Students are taught how electricity is generated and are encouraged to perform mini electric and water audits on their own homes.

7.2 Commercial / Industrial Programs

7.2.1 Commercial Energy Survey Program

7.2.1.1 Program Description. This survey is a physical walk-through inspection of the commercial facility. The commercial customer having a Commercial Energy Survey receives a report at the time of the survey. Within 30 days of a detailed audit, the customer receives a written report. Conservation literature is provided to all customers.

7.2.1.2 Program Participation. The program is focused on commercial customers to increase the energy efficiency and energy conservation.

7.2.1.3 Program Benefits. Customers will benefit from the energy conservation, which will decrease their electric bills.

7.2.1.4 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community even though not found cost effective...

APPENDIX B.2

COMMERCIAL/INDUSTRIAL MEASURES

PROGRAM: Updated DLC-1AI. PROGRAM DEMAND SAVINGS AND LINE LOSSES

(1) CUSTOMER KW REDUCTION AT THE METER	2.24 KW/CUST
(2) GENERATOR KW REDUCTION PER CUSTOMER	2.43 KW GEN/CUST
(3) KW LINE LOSS PERCENTAGE	8.0 %
(4) GENERATION KWH REDUCTION PER CUSTOMER	0.0 KWH/CUST/YR
(5) KWH LINE LOSS PERCENTAGE	6.0 %
(6) GROUP LINE LOSS MULTIPLIER	1.0034
(7) CUSTOMER KWH PROGRAM INCREASE AT METER	0.0 KWH/CUST/YR
(8)* CUSTOMER KWH REDUCTION AT METER	0.0 KWH/CUST/YR

II. ECONOMIC LIFE AND K FACTORS

(1) STUDY PERIOD FOR CONSERVATION PROGRAM	20 YEARS
(2) GENERATOR ECONOMIC LIFE	25 YEARS
(3) T & D ECONOMIC LIFE	25 YEARS
(4) K FACTOR FOR GENERATION	1.27
(5) K FACTOR FOR T & D	1.27
(6)* SWITCH REV REQ(0) OR VAL-OF-DEF (1)	1

III. UTILITY AND CUSTOMER COSTS

(1)** UTILITY NONRECURRING COST PER CUSTOMER	219.54 \$/CUST
(2)** UTILITY RECURRING COST PER CUSTOMER	47.13 \$/CUST/YR
(3) UTILITY COST ESCALATION RATE	3.0 %
(4) CUSTOMER EQUIPMENT COST	0.00 \$/CUST
(5) CUSTOMER EQUIPMENT ESCALATION RATE	3.0 %
(6) CUSTOMER O & M COST	0.00 \$/CUST/YR
(7) CUSTOMER O & M ESCALATION RATE	3.0 %
(8)* CUSTOMER TAX CREDIT PER INSTALLATION	0.00 \$/CUST
(9)* CUSTOMER TAX CREDIT ESCALATION RATE	3.0 %
(10)* INCREASED SUPPLY COSTS	0.00 \$/CUST/YR
(11)* SUPPLY COSTS ESCALATION RATE	3.0 %
(12)* UTILITY DISCOUNT RATE	5.50 %
(13)* UTILITY AFUDC RATE	5.50 %
(14)* UTILITY NON RECURRING REBATE/INCENTIVE	0.00 \$/CUST
(15)* UTILITY RECURRING REBATE/INCENTIVE	57.31 \$/CUST/YR
(16)* UTILITY REBATE/INCENTIVE ESCAL RATE	0.0 %

* SUPPLEMENTAL INFORMATION NOT SPECIFIED IN WORKBOOK

** NONRECURRING & RECURRING COSTS IN INPUTS III.(1 & 2) DO NOT INCLUDE CUSTOMER REBATES PAID BY THE UTILITY. UTILITY REBATES ARE INPUT IN III.(14 & 15)

IV. AVOIDED GENERATOR, TRANS. AND DIST. COSTS

(1) BASE YEAR	2001
(2) IN-SERVICE YEAR FOR AVOIDED GENERATING UNIT	2004
(3) IN-SERVICE YEAR FOR AVOIDED T & D	2004
(4) BASE YEAR AVOIDED GENERATING UNIT COST	372.7684 \$/KWH
(5) BASE YEAR AVOIDED TRANSMISSION COST	78.78243 \$/KWH
(6) BASE YEAR DISTRIBUTION COST	56.28075 \$/KWH
(7) GEN, TRAN, & DIST COST ESCALATION RATE	3 %
(8) GENERATOR FIXED O & M COST	5.007448 \$/KWH/YR
(9) GENERATOR FIXED O&M ESCALATION RATE	3 %
(10) TRANSMISSION FIXED O & M COST	3.07661 \$/KWH/YR
(11) DISTRIBUTION FIXED O & M COST	14.64042 \$/KWH/YR
(12) T&D FIXED O&M ESCALATION RATE	3 %
(13) AVOIDED GEN UNIT VARIABLE O & M COSTS	0.194145 CENTS/KWH
(14) GENERATOR VARIABLE O&M COST ESCALATION RATE	3 %
(15) GENERATOR CAPACITY FACTOR	85 %
(16) AVOIDED GENERATING UNIT FUEL COST	1.933917 CENTS/KWH
(17) AVOIDED GEN UNIT FUEL ESCALATION RATE	3.17 %
(18)* AVOIDED PURCHASE CAPACITY COST PER KW	0 \$/KWH/YR
(19)* CAPACITY COST ESCALATION RATE	3 %

V. NON-FUEL ENERGY AND DEMAND CHARGES

(1) NON-FUEL COST IN CUSTOMER BILL	5.959 CENTS/KWH
(2) NON-FUEL ESCALATION RATE	3.0 %
(3) CUSTOMER DEMAND CHARGE PER KW	0.00 \$/KWH/MO
(4) DEMAND CHARGE ESCALATION RATE	0.0 %
(5)* DIVERSITY and ANNUAL DEMAND ADJUSTMENT FACTOR FOR CUSTOMER BILL	1.0

* FIRE Program Version Number: 1.03

PROGRAM: Updated DLC-1A

(6) GROUP LINE LOSS MULTIPLIER	1.0034
(7) CUSTOMER KWH PROGRAM INCREASE AT METER	0.0 KWH/CUST/YR
(8)* CUSTOMER KWH REDUCTION AT METER	0.0 KWH/CUST/YR

II. ECONOMIC LIFE AND K FACTORS

(1) STUDY PERIOD FOR CONSERVATION PROGRAM	20 YEARS
(2) GENERATOR ECONOMIC LIFE	25 YEARS
(3) T & D ECONOMIC LIFE	25 YEARS
(4) K FACTOR FOR GENERATION	1.27
(5) K FACTOR FOR T & D	1.27
(6)* SWITCH REV REQ(0) OR VAL-OF-DEF (1)	1

III. UTILITY AND CUSTOMER COSTS

(1)** UTILITY NONRECURRING COST PER CUSTOMER	219.54 \$/CUST
(2)** UTILITY RECURRING COST PER CUSTOMER	31.39 \$/CUST/YR
(3) UTILITY COST ESCALATION RATE	3.0 %
(4) CUSTOMER EQUIPMENT COST	0.00 \$/CUST
(5) CUSTOMER EQUIPMENT ESCALATION RATE	3.0 %
(6) CUSTOMER O & M COST	0.00 \$/CUST/YR
(7) CUSTOMER O & M ESCALATION RATE	3.0 %
(8)* CUSTOMER TAX CREDIT PER INSTALLATION	0.00 \$/CUST
(9)* CUSTOMER TAX CREDIT ESCALATION RATE	3.0 %
(10)* INCREASED SUPPLY COSTS	0.00 \$/CUST/YR
(11)* SUPPLY COSTS ESCALATION RATE	3.0 %
(12)* UTILITY DISCOUNT RATE	5.50 %
(13)* UTILITY AFUDC RATE	5.50 %
(14)* UTILITY NON RECURRING REBATE/INCENTIVE	0.00 \$/CUST
(15)* UTILITY RECURRING REBATE/INCENTIVE	21.49 \$/CUST/YR
(16)* UTILITY REBATE/INCENTIVE ESCAL RATE	0.0 %

* SUPPLEMENTAL INFORMATION NOT SPECIFIED IN WORKBOOK

** NONRECURRING & RECURRING COSTS IN INPUTS III.(1 & 2) DO NOT INCLUDE CUSTOMER REBATES PAID BY THE UTILITY. UTILITY REBATES ARE INPUT IN III.(14 & 15).

IV. AVOIDED GENERATOR, TRANS. AND DIST. COSTS

(1) BASE YEAR	2001
(2) IN-SERVICE YEAR FOR AVOIDED GENERATING UNIT	2004
(3) IN-SERVICE YEAR FOR AVOIDED T & D	2004
(4) BASE YEAR AVOIDED GENERATING UNIT COST	372.7684 \$/KWH
(5) BASE YEAR AVOIDED TRANSMISSION COST	78.78243 \$/KWH
(6) BASE YEAR DISTRIBUTION COST	56.28075 \$/KWH
(7) GEN, TRAN, & DIST COST ESCALATION RATE	3 %
(8) GENERATOR FIXED O & M COST	5.007448 \$/KWH/YR
(9) GENERATOR FIXED O&M ESCALATION RATE	3 %
(10) TRANSMISSION FIXED O & M COST	3.07661 \$/KWH/YR
(11) DISTRIBUTION FIXED O & M COST	14.64042 \$/KWH/YR
(12) T&D FIXED O&M ESCALATION RATE	3 %
(13) AVOIDED GEN UNIT VARIABLE O & M COSTS	0.194145 CENTS/KWH
(14) GENERATOR VARIABLE O&M COST ESCALATION RATE	3 %
(15) GENERATOR CAPACITY FACTOR	85 %
(16) AVOIDED GENERATING UNIT FUEL COST	1.933917 CENTS/KWH
(17) AVOIDED GEN UNIT FUEL ESCALATION RATE	3.17 %
(18)* AVOIDED PURCHASE CAPACITY COST PER KW	0 \$/KWH/YR
(19)* CAPACITY COST ESCALATION RATE	3 %

V. NON-FUEL ENERGY AND DEMAND CHARGES

(1) NON-FUEL COST IN CUSTOMER BILL	5.959 CENTS/KWH
(2) NON-FUEL ESCALATION RATE	3.0 %
(3) CUSTOMER DEMAND CHARGE PER KW	0.00 \$/KW/MO
(4) DEMAND CHARGE ESCALATION RATE	0.0 %
(5)* DIVERSITY and ANNUAL DEMAND ADJUSTMENT FACTOR FOR CUSTOMER BILL	1.0

* FIRE Program Version Number: 1.03

APPENDIX B.3

FLORIDA POWER & LIGHT MEASURE

PROGRAM: OPBCI. PROGRAM DEMAND SAVINGS AND LINE LOSSES

(1) CUSTOMER KW REDUCTION AT THE METER	1.00	KW/CUST
(2) GENERATOR KW REDUCTION PER CUSTOMER	1.09	KW GEN/CUST
(3) KW LINE LOSS PERCENTAGE	8.0	%
(4) GENERATION KWH REDUCTION PER CUSTOMER	0.0	KWH/CUST/YR
(5) KWH LINE LOSS PERCENTAGE	6.0	%
(6) GROUP LINE LOSS MULTIPLIER	1.0034	
(7) CUSTOMER KWH PROGRAM INCREASE AT METER	0.0	KWH/CUST/YR
(8)* CUSTOMER KWH REDUCTION AT METER	0.0	KWH/CUST/YR

IV. AVOIDED GENERATOR, TRANS. AND DIST. COSTS

(1) BASE YEAR	2001
(2) IN-SERVICE YEAR FOR AVOIDED GENERATING UNIT	2004
(3) IN-SERVICE YEAR FOR AVOIDED T & D	2004
(4) BASE YEAR AVOIDED GENERATING UNIT COST	372.7684 \$/KWH
(5) BASE YEAR AVOIDED TRANSMISSION COST	78.78243 \$/KWH
(6) BASE YEAR DISTRIBUTION COST	56.28075 \$/KWH
(7) GEN, TRAN, & DIST COST ESCALATION RATE	3 %
(8) GENERATOR FIXED O & M COST	5.007448 \$/KWH/YR
(9) GENERATOR FIXED O&M ESCALATION RATE	3 %
(10) TRANSMISSION FIXED O & M COST	3.07661 \$/KWH/YR
(11) DISTRIBUTION FIXED O & M COST	14.64042 \$/KWH/YR
(12) T&D FIXED O&M ESCALATION RATE	3 %
(13) AVOIDED GEN UNIT VARIABLE O & M COSTS	0.194145 CENTS/KWH
(14) GENERATOR VARIABLE O&M COST ESCALATION RATE	3 %
(15) GENERATOR CAPACITY FACTOR	85 %
(16) AVOIDED GENERATING UNIT FUEL COST	1.933917 CENTS/KWH
(17) AVOIDED GEN UNIT FUEL ESCALATION RATE	3.17 %
(18)* AVOIDED PURCHASE CAPACITY COST PER KW	0 \$/KWH/YR
(19)* CAPACITY COST ESCALATION RATE	3 %

II. ECONOMIC LIFE AND K FACTORS

(1) STUDY PERIOD FOR CONSERVATION PROGRAM	20	YEARS
(2) GENERATOR ECONOMIC LIFE	25	YEARS
(3) T & D ECONOMIC LIFE	25	YEARS
(4) K FACTOR FOR GENERATION	1.27	
(5) K FACTOR FOR T & D	1.27	
(6)* SWITCH REV REQ(0) OR VAL.OF-DEF (1)	1	

III. UTILITY AND CUSTOMER COSTS

(1)** UTILITY NONRECURRING COST PER CUSTOMER	66.84	\$/CUST
(2)** UTILITY RECURRING COST PER CUSTOMER	0.00	\$/CUST/YR
(3) UTILITY COST ESCALATION RATE	3.0	%
(4) CUSTOMER EQUIPMENT COST	258.86	\$/CUST
(5) CUSTOMER EQUIPMENT ESCALATION RATE	3.0	%
(6) CUSTOMER O & M COST	0.00	\$/CUST/YR
(7) CUSTOMER O & M ESCALATION RATE	3.0	%
(8)* CUSTOMER TAX CREDIT PER INSTALLATION	0.00	\$/CUST
(9)* CUSTOMER TAX CREDIT ESCALATION RATE	0.0	%
(10)* INCREASED SUPPLY COSTS	0.00	\$/CUST/YR
(11)* SUPPLY COSTS ESCALATION RATE	0.0	%
(12)* UTILITY DISCOUNT RATE	5.50	%
(13)* UTILITY AFUDC RATE	5.50	%
(14)* UTILITY NON RECURRING REBATE/INCENTIVE	0.00	\$/CUST
(15)* UTILITY RECURRING REBATE/INCENTIVE	0.00	\$/CUST/YR
(16)* UTILITY REBATE/INCENTIVE ESCAL RATE	0.0	%

V. NON-FUEL ENERGY AND DEMAND CHARGES

(1) NON-FUEL COST IN CUSTOMER BILL	5.446	CENTS/KWH
(2) NON-FUEL ESCALATION RATE	3.0	%
(3) CUSTOMER DEMAND CHARGE PER KW	6.90	\$/KW/MO
(4) DEMAND CHARGE ESCALATION RATE	0.0	%
(5)* DIVERSITY and ANNUAL DEMAND ADJUSTMENT FACTOR FOR CUSTOMER BILL	1.0	

* FIRE Program Version Number: 1.03

* SUPPLEMENTAL INFORMATION NOT SPECIFIED IN WORKBOOK

** NONRECURRING & RECURRING COSTS IN INPUTS III.(1 & 2) DO NOT INCLUDE CUSTOMER REBATES PAID BY THE UTILITY. UTILITY REBATES ARE INPUT IN III.(14 & 15).

Executive Summary

In accordance with Rules 25-17.0021-.005, Florida Administrative Code, the Florida Public Service Commission (PSC) must establish numeric conservation goals for Orlando Utilities Commission (OUC). OUC is submitting proposed numeric conservation goals and the associated demand side management (DSM) plan to the PSC for approval. The development of the goals and conservation plan required thorough analysis and multiple steps.

First, potential DSM measures were compiled. In order to reduce cost, OUC did not evaluate each possible measure. Instead OUC focused on measures that had the highest potential for being cost-effective.

Inputs and assumptions were developed for the potential DSM measures as well as for the economic parameters and the avoided supply side unit. This data was input to a PSC approved model to evaluate the cost-effectiveness of the measures. Cost-effectiveness was determined by running three tests. The three tests run were the Rate Impact Test, the Total Resource Test, and the Participants Test.

OUC requires all measures to pass the Rate Impact Test to be considered cost-effective. From these results, numerical goals were developed for the ten-year period 2001 - 2010.

Of the potential DSM measures tested, none passed the Rate Impact Test. Since every measure failed the cost-effectiveness testing, the proposed numeric goals for residential and commercial and industrial are zero.

Recent Need for Power Dockets for Kissimmee Utility Authority (KUA) and Florida Municipal Power Agency (FMPA) for Cane Island Unit 3 (Docket No. 980802) and the City of Lakeland conversion of McIntosh Unit 5 to combined cycle (Docket No. 990023) evaluated dozens of DSM measures for similarly situated municipal utilities and also found no DSM measures were cost-effective.

Many things have changed since OUC's 1995 goals that tend to decrease the cost-effectiveness of DSM. The efficiency of new generation has increased. The cost of installing new generation has decreased. Fuel costs and fuel cost projections have decreased. Interest rates have fallen. All of these things have resulted in it becoming more difficult for DSM measures to be cost effective.

Because OUC views energy efficiency so importantly, OUC proposes to continue existing programs that have shown high participation and customer demand. The programs are focused on energy efficiency and conservation.

OUC will continue to consider a broad range of residential, commercial and industrial measures to assist OUC customers in the reduction of energy and demand and will continue to monitor the cost-effectiveness and value of these measures.

1.0 Introduction

In accordance with Rules 25-17.0021-.005, Florida Administrative Code, the Florida Public Service Commission (PSC) must establish numeric conservation goals for Orlando Utilities Commission (OUC). Each utility subject to the rule is required to propose numerical goal projections for the ten-year period 2001-2010. The PSC has initiated Docket 990722 – EG to implement the requirements of Rule 25-17.0021 - .005 for OUC. In response to this docket, OUC is submitting proposed numeric conservation goals and the associated demand side management (DSM) plan to the PSC for approval in this report.

In order to reduce cost, OUC did not model each possible DSM measure. OUC's study focused on alternatives that are expected to have the highest potential for being cost-effective. The DSM measures analyzed were compiled from programs deemed cost-effective in OUC's 1995 Demand Side Management Plan, existing OUC measures, and the most cost-effective measure evaluated by Florida's largest investor owned utility, Florida Power & Light.

By testing the most cost-effective measure from FPL, the assumption was made that if the most cost-effective measure for FPL did not prove cost-effective, then FPL's lesser cost-effective measures would also fail the analysis. Using this methodology, OUC has effectively screened all of FPL's measures.

Each potential measure was evaluated using the PSC approved Florida Integrated Resource Evaluator (FIRE) model providing the Rate Impact Test, the Total Resources Test, and the Participant Test. The model evaluates the economic impact of existing and proposed conservation measures by determining the relative cost effectiveness of the measures versus the avoided unit. Based on the cost effectiveness analysis, OUC proposed conservation goals and a corresponding demand side management plan.

This report contains seven sections. The next section presents the overall methodology used to develop the proposed numeric goals and supporting demand side management plan. The third section describes all inputs and assumptions associated with the potential DSM measures, avoided supply side generation and economic parameters. The fourth section describes the methodology and explanation of the results for the cost-effectiveness testing and analysis. The fifth section discusses the numerical results of the analysis. The sixth section describes the development of the proposed numerical

Adoption of Numeric Conservation Goals
Docket 990722**

Introduction

conservation goals. The seventh section describes OUC's proposed demand side management plan.

2.0 Methodology

Several steps were involved in the development of numeric conservation goals and the associated demand side management plan.

First, potential DSM measures for cost-effective analysis were selected. In order to reduce cost, the measures were chosen carefully. OUC did not model each possible DSM measure. Instead, OUC's study focused on alternatives that were expected to have the highest potential for being cost-effective. The DSM measures analyzed were compiled from programs deemed cost-effective in OUC's 1995 Demand Side Management Plan, existing OUC programs, and the most cost-effective measure that was found to be cost-effective by Florida's largest investor owned utility, Florida Power & Light. The potential DSM measures evaluated are listed in Table 3-1.

Second, each potential measure was evaluated for its cost-effectiveness. Measures were evaluated using the PSC approved Florida Integrated Resource Evaluator (FIRE) model which provides output in the form of the Rate Impact Test, the Total Resources Test, and the Participant Test. The model evaluates the economic impact of existing and proposed conservation measures by determining the relative cost effectiveness of the measures versus an avoided supply side resource. The avoided unit is the next unit planned for installation for the utility. FIRE Model methodology is discussed in Section 4.0. Avoided unit assumptions are discussed in Section 3.3.

Third, based on the cost effectiveness analysis, numeric conservation goals were developed. The numeric goals were calculated based on the demand and energy saved by the cost-effective measures. The results of the cost-effective analysis are listed in Table 5-1. The proposed numeric goals are listed in Table 6-1.

Fourth, a conservation plan was developed. Although OUC proposes zero goals, OUC proposes to continue existing conservation programs. The proposed DSM plan is described in Section 7.0.

3.0 Assumptions and Inputs for Cost-Effective Analysis

3.1 Demand-Side Management Measures

The DSM measures tested were taken from three sources: OUC existing DSM measures, measures proposed in OUC's 1995 DSM Plan, and the most cost-effective measure from Florida Power & Light's (FPL) 1999 goals. Each measure and its original source are listed in Table 3-1.

Basic assumptions were made in the development of input data for the measures. The sources for assumptions applying to all measures are shown in Table 3-2.

**Table 3-2
Source for Data Input Assumptions for DSM Measures**

- Study Period for economic evaluation set to 20 years.
- Fuel Forecast and economic parameters were taken from OUC's 1999 Ten Year Site Plan.
- OUC 1999 Utility average system fuel cost of 1.93 cents/kWh was taken from Resource Data International Inc. and escalated at 3.17 percent to 2001\$.
- Non-fuel cost in residential customer bill for 1999 is 5.62 cents/kWh (5.95 cents/kWh (2001\$)) based on monthly Typical Electric Bill Tabulation for 1,000 kWh users (Florida Municipal Electric Association Inc.).
- Non-fuel cost in commercial customer bill for 1999 is 5.14 cents/kWh (5.45 cents/kWh (2001\$)) based on monthly Typical Electric Bill Tabulation for 30 kW – 6,000 kWh users (Florida Municipal Electric Association Inc.).
- Customer Demand Charge for 1999 of \$6.5 /kW/month (\$6.9/kW/month (2001\$)) per OUC.
- Transmission Capital Costs of \$78.78/kW (2001\$) were taken from FPL's 1999 goals
- Transmission Fixed O&M costs of \$3.08/ kW/ Year (2001\$) were taken from FPL's 1999 goals.
- Distribution Capital Costs of \$56.28/kW (2001\$) were taken from FPL's 1999 goals.
- Distribution Fixed O&M Costs of \$14.64/kW/Year (2001\$) were taken from FPL's 1999 goals.

Input data for these measures was compiled from Annual FEECA Reports, OUC's 1995 DSM Plan, OUC's 1999 Ten Year Site Plan, FPL's testimony (Docket 971004-EG) and FPL's supplemental responses for FPL's 1999 Ten Year Site Plan as well as other data provided by OUC. The number of participants for the FPL measure was developed by the ratio between OUC's and FPL's number of customers. The input data used in the FIRE Model is shown in Appendix B

3.2 Economic Parameters

The economic parameters used in the evaluation were obtained from OUC's 1999 Ten Year Site Plan and are presented in the following subsections.

3.2.1 Inflation and Escalation Rates

The general inflation rate is 3.0 percent annually. The 3.0 percent is applicable to capital costs, operations and maintenance (O&M) expenses, and various other expenses. Escalation rate for fuel costs is 3.17%.

3.2.2 Present Worth Discount Rate

The present worth discount rate applied in the study is equal to the bond interest rate of 5.5%.

3.2.3 OUC Municipal Bond Interest Rate

The long-term municipal bond interest rate is assumed to be 5.5 percent. This rate is based on the current bond rate for OUC.

3.2.4 Interest During Construction Interest Rate

The interest during construction interest rate for OUC is assumed to be equal to the bond rate of 5.5 percent.

3.2.5 Fixed Charge Rate

Based upon a 2.0 percent issuance fee, 1.0 percent annual insurance cost, a bond interest rate of 5.5 percent, and a bond term of 25 years, the annual fixed charge rate is 8.78 percent.

3.3 Avoided Unit

Per OUC's 1999 Ten Year Site Plan, OUC's expansion plan does not require unit additions for the time period of 1999 through 2008. There has been a major change since the submittal of the 1999 Ten Year Site Plan. OUC has sold its Indian River steam units to Reliant. Under this agreement, OUC will purchase power generated from Indian River for four years. At the expiration of the four-year contract, OUC maintains the option of signing a second four-year contract.

OUC will thus have an option of building new generation to be in service when the initial purchase power term expires. For purposes of determining an avoided unit for the DSM evaluations, a new combined cycle has been selected with an in service date that matches the expiration of the first term of the purchase power contract. This represents a conservative choice for an avoided unit. If the optional term of the purchase power

contract is lower in cost than the avoided unit, then DSM measures that are evaluated against the avoided unit will be less cost-effective. On the other hand, if the avoided unit represents the least cost alternative, then the DSM measures will be properly evaluated.

The estimated capital cost for the combined cycle and its projected performance is presented in Table 3-3.

**Table 3-3
Generating Unit Characteristics
For Avoided Unit**

Item	General Electric 7FA 2 x 1 Combined Cycle
Total Capital Cost, 2001 \$1,000 (1)	\$ 208,003
O&M Cost-Baselload Duty	
Fixed O&M Cost, 2001 \$/kW-y	5.00
Variable O&M Cost, 2001 \$/MWh	1.94
Economic Life	25
Net Plant Capacity (MW) @ ISO	529
Net Heat Rate @ ISO (HHV)	6,704

Equivalent Forced Outage Rate, percent	4.2
Planned Maintenance Outage, weeks/y	3
Construction Period, months	24

(1) Does not include interest during construction.

4.0 Cost-Effective Analysis

Each potential measure was evaluated for its cost-effectiveness. Measures were evaluated using the PSC approved Florida Integrated Resource Evaluator (FIRE) model which provides output in the form of the Rate Impact Test, the Total Resources Test, and the Participant Test. The model evaluates the economic impact of existing and proposed conservation programs by determining the relative cost-effectiveness of the programs versus the avoided supply side resource. The avoided unit is the next unit planned for installation for the utility. Based on the cost effectiveness analysis, numeric conservation goals are developed.

4.1 FIRE Model Methodology

In order to evaluate the cost-effectiveness of all existing and potential DSM measures in the reporting format specified by the PSC, the Florida Integrated Resource Evaluator (FIRE) model was used. The FIRE model was designed by Florida Power Corporation and is used by several utilities in Florida. The model evaluates the economic impact of existing and proposed conservation measures by determining the cost effectiveness of the measures versus the avoided unit. Assumptions inherent in the FIRE Model are listed in Table 4-1.

The FIRE Model was designed to evaluate a wide variety of DSM measures. The model uses avoided unit costs, DSM measure costs, operations and maintenance costs, rebates/incentives, and other input variables to calculate the incremental benefits of a DSM measure. These incremental costs are used to perform three cost-effectiveness tests: the Rate Impact Test, the Total Resources Test, and the Participant Test.

4.2 FIRE Model Output

FIRE Model results are output in the form of three cost-effectiveness tests. All the DSM cost effectiveness tests are based on the comparison of discounted present worth benefits to costs for a specific DSM measure. Each test is designed to measure costs and benefits from a different perspective.

The Rate Impact Test is a measure of the expected impact on customer rates resulting from a DSM program. The test statistic is the ratio of the utility's benefits (avoided supply costs and increased revenues) compared to the utility's costs (program

costs, incentives paid, increased supply costs and revenue losses). A value of less than one indicates an upward pressure on rate levels as a result of the DSM program.

The Total Resources Cost Test measures the benefit / cost ratio by comparing the total program benefits (both the participant's and utility's) to the total program costs (equipment costs, supply costs, participant costs).

The Participants Test measures the impact of the DSM program on the participating customer. Benefits to the participant may include bill reductions, incentives paid, and tax credits. Participants' costs may include equipment costs, operation and maintenance expenses, equipment removal, etc. The Participants' Test is important because customers will not participate if the program is not beneficial to them.

All three cost effectiveness tests were calculated for each DSM measure analyzed and considered in our evaluation. OUC views the Rate Impact Test as the primary test for determining the cost effectiveness for DSM measures for its system.

**Table 4-1
FIRE Model Assumptions**

- System demand is growing. Demand reductions due to DSM will result in reduced need for system expansion.
- Individual demand reductions can be related to reduced need for system generation expansion.
- The generation reduction will be evaluated with respect to specified generation.
- Decreases or increases in revenue due to demand side programs will impact rate levels and will be passed on to all customers.
- Additional conservation taking place after the next deferred generating unit will affect subsequent units.

5.0 Cost-Effective Analysis Results

5.1 Numerical Results

The numerical results from the FIRE Model analysis are listed below in Table 5-1. Descriptions of the measures are listed in Table 3-1 of Section 3.

Table 5-1
FIRE Model Results

Abbr.	DSM Measure	Cost-Effectiveness Test Rating		
		Rate Impact	Total Resource Cost	Participant Costs
	<u>Residential</u>			
REnSur	Energy Survey	0.22	1.05	1.00
HPump	Heat Pump	0.79	0.24	0.28
Weath	Weatherization	0.34	1.48	11.62
LIncome	Low Income Energy Fix-up	0.19	0.25	1.00
EWaterH	Efficient Water Heating	0.72	0.54	0.75
DLC - 1	Direct Load Control - Main	0.99	1.75	1.00
DLC - 2	Direct Load Control – Pool Pumps	0.52	0.74	1.00
	<u>Commercial/Industrial</u>			
CEnSur	Commercial/Energy Survey	0.42	11.64	1.00
CEL	Commercial Lighting	0.35	0.35	1.01
CCool	Commercial Cooling	0.30	1.86	1.00
OPBC	Off Peak Battery Charging – FPL	0.43	0.65	1.51

5.2 Analysis of Results

Although every DSM measure failed the Rate Impact Test, OUC proposes the continuation of select conservation measures. OUC views energy conservation as an important service to OUC customers and the community. By continuing conservation

programs, OUC maintains interaction with customers and is better able to determine the needs of OUC's customers and the community.

OUC proposes to continue the following residential and commercial/industrial conservation programs and measures:

Residential:

- Residential Energy Survey
- Residential Heat Pump
- Residential Weatherization
- Residential Low Income Home Energy Fix-up
- Residential Educational Outreach Program

Commercial/Industrial:

- Commercial Energy Survey Program

The Educational Outreach Program was not tested because it is an educational program for children. Each of the proposed programs is described in detail in Section 7.0.

6.0 Proposed Numeric Conservation Goals

The proposed numeric conservation goals for OUC are based on the FIRE Model results for the Rate Impact Test. No residential or commercial or industrial measures were found cost-effective for OUC customers. OUC's numeric proposed conservation goals are shown in Table 6-1.

Table 6-1 Proposed Numeric Conservation Goals						
Year	Residential Reduction			Commercial/Industrial Reduction		
	Summer kW	Winter kW	MWh	Summer kW	Winter kW	MWh
2001	0	0	0	0	0	0
2002	0	0	0	0	0	0
2003	0	0	0	0	0	0
2004	0	0	0	0	0	0
2005	0	0	0	0	0	0
2006	0	0	0	0	0	0
2007	0	0	0	0	0	0
2008	0	0	0	0	0	0
2009	0	0	0	0	0	0
2010	0	0	0	0	0	0

Although none of measures passed the Rate Impact Test to qualify as cost-effective, OUC proposes the continuation of OUC's existing programs. The programs are described in Section 7.0.

7.0 Existing Demand Side Management Programs

7.1 Residential Programs

7.1.1 Residential Energy Survey

7.1.1.1 Program Description. This program is designed to provide residential homeowners with recommended energy efficiency measures and practices. The Residential Energy Survey includes complete attic, air duct and air return inspections. Literature on other OUC programs is also provided to the residential customers. The customer is given a choice to receive a low-flow showerhead or compact fluorescent bulb. OUC Energy Analysts are presently using this walk-thru type audit as a means to get OUC customers to participate in other conservation programs and to qualify for appropriate rebates.

7.1.1.2 Program Participation. Participation has averaged over two-thousand energy surveys per year for the past ten years. Feedback from customers that have taken advantage of the survey has been very positive. Residential homeowners are encouraged to participate in this program.

7.1.1.3 Program Benefits. One of the primary benefits of the program is providing education to the customer on energy conservation measures and ways their lifestyle can directly impact their use of energy. Customers will be able to participate in conservation measures that they otherwise might not have been aware. Customers will benefit from the increased energy conservation in their home, which will decrease their electric bills.

7.1.1.5 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community even though not found cost effective.

7.1.2 Residential Heat Pump Program

7.1.2.1 Program Description. This program is designed to minimize thermal losses due to ductwork and insulation. Heat pumps are marketed to the owners of existing residential strip heating systems and older, inefficient central air conditioners and heat pumps. Contractors often install energy efficient heat pumps plus duct repairs and additional insulation as a part of a total energy saving package for customers.

7.1.2.2 Program Participation. Owners of existing residential strip heating systems and older, inefficient central air conditioners are the focus. The program requires heat

pumps with a SEER of 11 (or greater) and a HSPF of 7.0 (or greater) in order to qualify for rebates.

7.1.2.3 Program Benefits. Customers will be able to obtain rebates in terms of equipment SEER levels, tonnage and replaced equipment. Customers will benefit from the increased energy conservation in their home, which will decrease their electric bills.

One of the main benefits of this program is the duct work and insulation level improvements made by contractors when installing the energy efficient heat pumps.

7.1.2.4 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community even though not found cost effective.

7.1.3 Residential Weatherization Program

7.1.3.1 Program Description. This program is designed for existing single family homes and promotes R-19 ceiling insulation (or higher), caulking, weather-stripping, window treatment, water heater insulation and air conditioning heating supply and return air duct repair.

7.1.3.2 Program Participation. This program targets existing single family homes through Residential Energy Surveys, trade shows, exhibits, and neighborhood meetings.

7.1.3.3 Program Benefits. Customers will benefit from the customized weatherization of their homes, which will decrease their electric bills.

Customers are eligible for a \$140 rebate for R-19 ceiling insulation, \$100 rebate for duct repairs and up to \$110 for other conservation measures specified above. In addition, the customer is allowed to carry payments for ceiling insulation on their electric bill for 12 to 24 months. OUC directly pays the total contractor cost for insulation when OUC provides the financing.

7.1.3.4 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. Even though not found cost-effective, OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community.

7.1.4 Low Income Home Energy Fix-up Program

7.1.4.1 Program Description. This program targets low-income residential customers, customers with an annual income of less than \$20,000. Every customer is eligible for an energy audit. Audit recommendations usually require the customer to spend money replacing or adding energy conservation measures. Low-income customers may not have the discretionary income to make these changes.

The program pays 85 percent of the total contract cost for home weatherization for the following measures: upgrading ceiling insulation to R-19, exterior and interior caulking, weather-stripping doors and windows, air conditioning / heating supply and return air duct repairs and water heater insulation. The purpose of the program is to reduce the energy cost for low income households, particularly those households with elderly persons, disabled persons, and children, by improving the energy efficiency of their homes and ensuring a safe and healthy community.

7.1.4.2 Program Participation. Low-income residential customers are encouraged to participate.

7.1.4.3 Program Benefits. Customers will be able to participate in conservation measures that they might not be able to otherwise afford. Eighty-five percent of the bill is picked up by OUC, the other 15 percent can be financed on their monthly electric bill. Low-income customers will benefit from the customized weatherization of their homes, which will decrease their electric bills.

OUC will be helping to lower the bills of low-income customers who may have more difficulty paying their bills. Reducing the bill of the low-income customer may improve the customers ability to pay the bill, thereby decreasing costly service disconnect fees and late charges. OUC believes this will help to achieve and maintain high customer satisfaction.

7.1.4.4 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community even though not found cost effective..

OUC has agreed in a Memorandum of Understanding with the State Department of Consumer Affairs dated March 17, 1995 to continue this program.

7.1.5 Educational Outreach Program. This program is now entering its 15th year of operation. The program is very successful and has won several awards for contributions to education. The program consists of hour long classroom presentations focused on teaching students about energy and water conservation. Students are taught how electricity is generated and are encouraged to perform mini electric and water audits on their own homes.

7.2 Commercial / Industrial Programs

7.2.1 Commercial Energy Survey Program

7.2.1.1 Program Description. This survey is a physical walk-through inspection of the commercial facility. The commercial customer having a Commercial Energy Survey receives a report at the time of the survey. Within 30 days of a detailed audit, the customer receives a written report. Conservation literature is provided to all customers.

7.2.1.2 Program Participation. The program is focused on commercial customers to increase the energy efficiency and energy conservation.

7.2.1.3 Program Benefits. Customers will benefit from the energy conservation, which will decrease their electric bills.

7.2.1.4 Cost Effectiveness Evaluation. OUC has used the Commission approved cost-effectiveness methodologies required by Rule 25-17.008 to determine the cost effectiveness of this program. The cost effectiveness analysis can be found in Appendix B. OUC has chosen to continue the program due to positive responses from customers and potential benefit to the community even though not found cost effective...

APPENDIX B.2

COMMERCIAL/INDUSTRIAL MEASURES

Input Data

PROGRAM: Updated DLC-1A

I. PROGRAM DEMAND SAVINGS AND LINE LOSSES

(1) CUSTOMER KW REDUCTION AT THE METER	2.24 KW/CUST
(2) GENERATOR KW REDUCTION PER CUSTOMER	2.43 KW GEN/CUST
(3) KW LINE LOSS PERCENTAGE	8.0 %
(4) GENERATION KWH REDUCTION PER CUSTOMER	0.0 KWH/CUST/YR
(5) KWH LINE LOSS PERCENTAGE	6.0 %
(6) GROUP LINE LOSS MULTIPLIER	1.0034
(7) CUSTOMER KWH PROGRAM INCREASE AT METER	0.0 KWH/CUST/YR
(8)* CUSTOMER KWH REDUCTION AT METER	0.0 KWH/CUST/YR

II. ECONOMIC LIFE AND K FACTORS

(1) STUDY PERIOD FOR CONSERVATION PROGRAM	20 YEARS
(2) GENERATOR ECONOMIC LIFE	25 YEARS
(3) T & D ECONOMIC LIFE	25 YEARS
(4) K FACTOR FOR GENERATION	1.27
(5) K FACTOR FOR T & D	1.27
(6)* SWITCH REV REQ(0) OR VAL-OF-DEF (1)	1

III. UTILITY AND CUSTOMER COSTS

(1)** UTILITY NONRECURRING COST PER CUSTOMER	219.54 \$/CUST
(2)** UTILITY RECURRING COST PER CUSTOMER	47.13 \$/CUST/YR
(3) UTILITY COST ESCALATION RATE	3.0 %
(4) CUSTOMER EQUIPMENT COST	0.00 \$/CUST
(5) CUSTOMER EQUIPMENT ESCALATION RATE	3.0 %
(6) CUSTOMER O & M COST	0.00 \$/CUST/YR
(7) CUSTOMER O & M ESCALATION RATE	3.0 %
(8)* CUSTOMER TAX CREDIT PER INSTALLATION	0.00 \$/CUST
(9)* CUSTOMER TAX CREDIT ESCALATION RATE	3.0 %
(10)* INCREASED SUPPLY COSTS	0.00 \$/CUST/YR
(11)* SUPPLY COSTS ESCALATION RATE	3.0 %
(12)* UTILITY DISCOUNT RATE	5.50 %
(13)* UTILITY AFUDC RATE	5.50 %
(14)* UTILITY NON RECURRING REBATE/INCENTIVE	0.00 \$/CUST
(15)* UTILITY RECURRING REBATE/INCENTIVE	57.31 \$/CUST/YR
(16)* UTILITY REBATE/INCENTIVE ESCAL RATE	0.0 %

* SUPPLEMENTAL INFORMATION NOT SPECIFIED IN WORKBOOK

** NONRECURRING & RECURRING COSTS IN INPUTS III.(1 & 2) DO NOT INCLUDE CUSTOMER REBATES PAID BY THE UTILITY. UTILITY REBATES ARE INPUT IN III.(14 & 15)

IV. AVOIDED GENERATOR, TRANS. AND DIST. COSTS

(1) BASE YEAR	2001
(2) IN-SERVICE YEAR FOR AVOIDED GENERATING UNIT	2004
(3) IN-SERVICE YEAR FOR AVOIDED T & D	2004
(4) BASE YEAR AVOIDED GENERATING UNIT COST	372.7684 \$/KWH
(5) BASE YEAR AVOIDED TRANSMISSION COST	78.78243 \$/KWH
(6) BASE YEAR DISTRIBUTION COST	56.28075 \$/KWH
(7) GEN, TRAN, & DIST COST ESCALATION RATE	3 %
(8) GENERATOR FIXED O & M COST	5.007448 \$/KWH/YR
(9) GENERATOR FIXED O&M ESCALATION RATE	3 %
(10) TRANSMISSION FIXED O & M COST	3.07661 \$/KWH/YR
(11) DISTRIBUTION FIXED O & M COST	14.64042 \$/KWH/YR
(12) T&D FIXED O&M ESCALATION RATE	3 %
(13) AVOIDED GEN UNIT VARIABLE O & M COSTS	0.194145 CENTS/KWH
(14) GENERATOR VARIABLE O&M COST ESCALATION RATE	3 %
(15) GENERATOR CAPACITY FACTOR	85 %
(16) AVOIDED GENERATING UNIT FUEL COST	1.933917 CENTS/KWH
(17) AVOIDED GEN UNIT FUEL ESCALATION RATE	3.17 %
(18)* AVOIDED PURCHASE CAPACITY COST PER KW	0 \$/KW/YR
(19)* CAPACITY COST ESCALATION RATE	3 %

V. NON-FUEL ENERGY AND DEMAND CHARGES

(1) NON-FUEL COST IN CUSTOMER BILL	5.959 CENTS/KWH
(2) NON-FUEL ESCALATION RATE	3.0 %
(3) CUSTOMER DEMAND CHARGE PER KW	0.00 \$/KW/MO
(4) DEMAND CHARGE ESCALATION RATE	0.0 %
(5)* DIVERSITY AND ANNUAL DEMAND ADJUSTMENT FACTOR FOR CUSTOMER BILL	1.0

* FIRE Program Version Number: 1.03

PROGRAM Updated DLC-1A

* Avoided Generation Unit: CC-OUC

6.0 Proposed Numeric Conservation Goals

The proposed numeric conservation goals for OUC are based on the FIRE Model results for the Rate Impact Test. No residential or commercial or industrial measures were found cost-effective for OUC customers. OUC's numeric proposed conservation goals are shown in Table 6-1.

Table 6-1
Proposed Numeric Conservation Goals

Year	Residential Reduction			Commercial/Industrial Reduction		
	Summer kW	Winter kW	MWh	Summer kW	Winter kW	MWh
2001	0	0	0	0	0	0
2002	0	0	0	0	0	0
2003	0	0	0	0	0	0
2004	0	0	0	0	0	0
2005	0	0	0	0	0	0
2006	0	0	0	0	0	0
2007	0	0	0	0	0	0
2008	0	0	0	0	0	0
2009	0	0	0	0	0	0
2010	0	0	0	0	0	0

Although none of measures passed the Rate Impact Test to qualify as cost-effective, OUC proposes the continuation of OUC's existing programs. The programs are described in Section 7.0.

1.0 Introduction

In accordance with Rules 25-17.0021-.005, Florida Administrative Code, the Florida Public Service Commission (PSC) must establish numeric conservation goals for Orlando Utilities Commission (OUC). Each utility subject to the rule is required to propose numerical goal projections for the ten-year period 2001-2010. The PSC has initiated Docket 990722 – EG to implement the requirements of Rule 25-17.0021 - .005 for OUC. In response to this docket, OUC is submitting proposed numeric conservation goals and the associated demand side management (DSM) plan to the PSC for approval in this report.

In order to reduce cost, OUC did not model each possible DSM measure. OUC's study focused on alternatives that are expected to have the highest potential for being cost-effective. The DSM measures analyzed were compiled from programs deemed cost-effective in OUC's 1995 Demand Side Management Plan, existing OUC measures, and the most cost-effective measure evaluated by Florida's largest investor owned utility, Florida Power & Light.

By testing the most cost-effective measure from FPL, the assumption was made that if the most cost-effective measure for FPL did not prove cost-effective, then FPL's lesser cost-effective measures would also fail the analysis. Using this methodology, OUC has effectively screened all of FPL's measures.

Each potential measure was evaluated using the PSC approved Florida Integrated Resource Evaluator (FIRE) model providing the Rate Impact Test, the Total Resources Test, and the Participant Test. The model evaluates the economic impact of existing and proposed conservation measures by determining the relative cost effectiveness of the measures versus the avoided unit. Based on the cost effectiveness analysis, OUC proposed conservation goals and a corresponding demand side management plan.

This report contains seven sections. The next section presents the overall methodology used to develop the proposed numeric goals and supporting demand side management plan. The third section describes all inputs and assumptions associated with the potential DSM measures, avoided supply side generation and economic parameters. The fourth section describes the methodology and explanation of the results for the cost-effectiveness testing and analysis. The fifth section discusses the numerical results of the analysis. The sixth section describes the development of the proposed numerical

Adoption of Numeric Conservation Goals
Docket 990722**

Introduction

conservation goals. The seventh section describes OUC's proposed demand side management plan.

2.0 Methodology

Several steps were involved in the development of numeric conservation goals and the associated demand side management plan.

First, potential DSM measures for cost-effective analysis were selected. In order to reduce cost, the measures were chosen carefully. OUC did not model each possible DSM measure. Instead, OUC's study focused on alternatives that were expected to have the highest potential for being cost-effective. The DSM measures analyzed were compiled from programs deemed cost-effective in OUC's 1995 Demand Side Management Plan, existing OUC programs, and the most cost-effective measure that was found to be cost-effective by Florida's largest investor owned utility, Florida Power & Light. The potential DSM measures evaluated are listed in Table 3-1.

Second, each potential measure was evaluated for its cost-effectiveness. Measures were evaluated using the PSC approved Florida Integrated Resource Evaluator (FIRE) model which provides output in the form of the Rate Impact Test, the Total Resources Test, and the Participant Test. The model evaluates the economic impact of existing and proposed conservation measures by determining the relative cost effectiveness of the measures versus an avoided supply side resource. The avoided unit is the next unit planned for installation for the utility. FIRE Model methodology is discussed in Section 4.0. Avoided unit assumptions are discussed in Section 3.3.

Third, based on the cost effectiveness analysis, numeric conservation goals were developed. The numeric goals were calculated based on the demand and energy saved by the cost-effective measures. The results of the cost-effective analysis are listed in Table 5-1. The proposed numeric goals are listed in Table 6-1.

Fourth, a conservation plan was developed. Although OUC proposes zero goals, OUC proposes to continue existing conservation programs. The proposed DSM plan is described in Section 7.0.

3.0 Assumptions and Inputs for Cost-Effective Analysis

3.1 Demand-Side Management Measures

The DSM measures tested were taken from three sources: OUC existing DSM measures, measures proposed in OUC's 1995 DSM Plan, and the most cost-effective measure from Florida Power & Light's (FPL) 1999 goals. Each measure and its original source are listed in Table 3-1.

Basic assumptions were made in the development of input data for the measures. The sources for assumptions applying to all measures are shown in Table 3-2.

**Table 3-2
Source for Data Input Assumptions for DSM Measures**

- Study Period for economic evaluation set to 20 years.
- Fuel Forecast and economic parameters were taken from OUC's 1999 Ten Year Site Plan.
- OUC 1999 Utility average system fuel cost of 1.93 cents/kWh was taken from Resource Data International Inc. and escalated at 3.17 percent to 2001\$.
- Non-fuel cost in residential customer bill for 1999 is 5.62 cents/kWh (5.95 cents/kWh (2001\$)) based on monthly Typical Electric Bill Tabulation for 1,000 kWh users (Florida Municipal Electric Association Inc.).
- Non-fuel cost in commercial customer bill for 1999 is 5.14 cents/kWh (5.45 cents/kWh (2001\$)) based on monthly Typical Electric Bill Tabulation for 30 kW – 6,000 kWh users (Florida Municipal Electric Association Inc.).
- Customer Demand Charge for 1999 of \$6.5 /kW/month (\$6.9/kW/month (2001\$)) per OUC.
- Transmission Capital Costs of \$78.78/kW (2001\$) were taken from FPL's 1999 goals
- Transmission Fixed O&M costs of \$3.08/ kW/ Year (2001\$) were taken from FPL's 1999 goals.
- Distribution Capital Costs of \$56.28/kW (2001\$) were taken from FPL's 1999 goals.
- Distribution Fixed O&M Costs of \$14.64/kW/Year (2001\$) were taken from FPL's 1999 goals.

Input data for these measures was compiled from Annual FEECA Reports, OUC's 1995 DSM Plan, OUC's 1999 Ten Year Site Plan, FPL's testimony (Docket 971004-EG) and FPL's supplemental responses for FPL's 1999 Ten Year Site Plan as well as other data provided by OUC. The number of participants for the FPL measure was developed by the ratio between OUC's and FPL's number of customers. The input data used in the FIRE Model is shown in Appendix B

3.2 Economic Parameters

The economic parameters used in the evaluation were obtained from OUC's 1999 Ten Year Site Plan and are presented in the following subsections.

3.2.1 Inflation and Escalation Rates

The general inflation rate is 3.0 percent annually. The 3.0 percent is applicable to capital costs, operations and maintenance (O&M) expenses, and various other expenses. Escalation rate for fuel costs is 3.17%.

3.2.2 Present Worth Discount Rate

The present worth discount rate applied in the study is equal to the bond interest rate of 5.5%.

3.2.3 OUC Municipal Bond Interest Rate

The long-term municipal bond interest rate is assumed to be 5.5 percent. This rate is based on the current bond rate for OUC.

3.2.4 Interest During Construction Interest Rate

The interest during construction interest rate for OUC is assumed to be equal to the bond rate of 5.5 percent.

3.2.5 Fixed Charge Rate

Based upon a 2.0 percent issuance fee, 1.0 percent annual insurance cost, a bond interest rate of 5.5 percent, and a bond term of 25 years, the annual fixed charge rate is 8.78 percent.

3.3 Avoided Unit

Per OUC's 1999 Ten Year Site Plan, OUC's expansion plan does not require unit additions for the time period of 1999 through 2008. There has been a major change since the submittal of the 1999 Ten Year Site Plan. OUC has sold its Indian River steam units to Reliant. Under this agreement, OUC will purchase power generated from Indian River for four years. At the expiration of the four-year contract, OUC maintains the option of signing a second four-year contract.

OUC will thus have an option of building new generation to be in service when the initial purchase power term expires. For purposes of determining an avoided unit for the DSM evaluations, a new combined cycle has been selected with an in service date that matches the expiration of the first term of the purchase power contract. This represents a conservative choice for an avoided unit. If the optional term of the purchase power

contract is lower in cost than the avoided unit, then DSM measures that are evaluated against the avoided unit will be less cost-effective. On the other hand, if the avoided unit represents the least cost alternative, then the DSM measures will be properly evaluated.

The estimated capital cost for the combined cycle and its projected performance is presented in Table 3-3.

**Table 3-3
Generating Unit Characteristics
For Avoided Unit**

Item	General Electric 7FA 2 x 1 Combined Cycle
Total Capital Cost, 2001 \$1,000 (1)	\$ 208,003

Fixed O&M Cost, 2001 \$/kW-y	5.00
Variable O&M Cost, 2001 \$/MWh	1.94
Economic Life	25
Net Plant Capacity (MW) @ ISO	529
Net Heat Rate @ ISO (HHV)	6,704
Equivalent Availability, percent	92.5
Equivalent Forced Outage Rate, percent	4.2
Planned Maintenance Outage, weeks/y	3
Construction Period, months	24
(1) Does not include interest during construction.	

4.0 Cost-Effective Analysis

Each potential measure was evaluated for its cost-effectiveness. Measures were evaluated using the PSC approved Florida Integrated Resource Evaluator (FIRE) model which provides output in the form of the Rate Impact Test, the Total Resources Test, and the Participant Test. The model evaluates the economic impact of existing and proposed conservation programs by determining the relative cost-effectiveness of the programs versus the avoided supply side resource. The avoided unit is the next unit planned for installation for the utility. Based on the cost effectiveness analysis, numeric conservation goals are developed.

4.1 FIRE Model Methodology

In order to evaluate the cost-effectiveness of all existing and potential DSM measures in the reporting format specified by the PSC, the Florida Integrated Resource Evaluator (FIRE) model was used. The FIRE model was designed by Florida Power Corporation and is used by several utilities in Florida. The model evaluates the economic impact of existing and proposed conservation measures by determining the cost effectiveness of the measures versus the avoided unit. Assumptions inherent in the FIRE Model are listed in Table 4-1.

The FIRE Model was designed to evaluate a wide variety of DSM measures. The model uses avoided unit costs, DSM measure costs, operations and maintenance costs, rebates/incentives, and other input variables to calculate the incremental benefits of a DSM measure. These incremental costs are used to perform three cost-effectiveness tests: the Rate Impact Test, the Total Resources Test, and the Participant Test.

4.2 FIRE Model Output

FIRE Model results are output in the form of three cost-effectiveness tests. All the DSM cost effectiveness tests are based on the comparison of discounted present worth benefits to costs for a specific DSM measure. Each test is designed to measure costs and benefits from a different perspective.

The Rate Impact Test is a measure of the expected impact on customer rates resulting from a DSM program. The test statistic is the ratio of the utility's benefits (avoided supply costs and increased revenues) compared to the utility's costs (program

costs, incentives paid, increased supply costs and revenue losses). A value of less than one indicates an upward pressure on rate levels as a result of the DSM program.

The Total Resources Cost Test measures the benefit / cost ratio by comparing the total program benefits (both the participant's and utility's) to the total program costs (equipment costs, supply costs, participant costs).

The Participants Test measures the impact of the DSM program on the participating customer. Benefits to the participant may include bill reductions, incentives paid, and tax credits. Participants' costs may include equipment costs, operation and maintenance expenses, equipment removal, etc. The Participants' Test is important because customers will not participate if the program is not beneficial to them.

All three cost effectiveness tests were calculated for each DSM measure analyzed and considered in our evaluation. OUC views the Rate Impact Test as the primary test for determining the cost effectiveness for DSM measures for its system.

**Table 4-1
FIRE Model Assumptions**

- System demand is growing. Demand reductions due to DSM will result in reduced need for system expansion.
- Individual demand reductions can be related to reduced need for system generation expansion.
- The generation reduction will be evaluated with respect to specified generation.
- Decreases or increases in revenue due to demand side programs will impact rate levels and will be passed on to all customers.
- Additional conservation taking place after the next deferred generating unit will affect subsequent units.

5.0 Cost-Effective Analysis Results

5.1 Numerical Results

The numerical results from the FIRE Model analysis are listed below in Table 5-1. Descriptions of the measures are listed in Table 3-1 of Section 3.

Table 5-1
FIRE Model Results

Abbr.	DSM Measure	Cost-Effectiveness Test Rating		
		Rate Impact	Total Resource Cost	Participant Costs

CEnSur	Commercial/Energy Survey	0.42	11.64	1.00
CEL	Commercial Lighting	0.35	0.35	1.01
CCool	Commercial Cooling	0.30	1.86	1.00
OPBC	Off Peak Battery Charging – FPL	0.43	0.65	1.51

5.2 Analysis of Results

Although every DSM measure failed the Rate Impact Test, OUC proposes the continuation of select conservation measures. OUC views energy conservation as an important service to OUC customers and the community. By continuing conservation

programs, OUC maintains interaction with customers and is better able to determine the needs of OUC's customers and the community.

OUC proposes to continue the following residential and commercial/industrial conservation programs and measures:

Residential:

- Residential Energy Survey
- Residential Heat Pump
- Residential Weatherization
- Residential Low-Income Home Energy Fix-up
- Residential Educational Outreach Program

Commercial/Industrial:

- Commercial Energy Survey Program

The Educational Outreach Program was not tested because it is an educational program for children. Each of the proposed programs is described in detail in Section 7.0.

6.0 Proposed Numeric Conservation Goals

The proposed numeric conservation goals for OUC are based on the FIRE Model results for the Rate Impact Test. No residential or commercial or industrial measures were found cost-effective for OUC customers. OUC's numeric proposed conservation goals are shown in Table 6-1.

**Table 6-1
Proposed Numeric Conservation Goals**

Year	Residential Reduction			Commercial/Industrial Reduction		
	Summer kW	Winter kW	MWh	Summer kW	Winter kW	MWh
2001	0	0	0	0	0	0
2002	0	0	0	0	0	0
2003	0	0	0	0	0	0
2004	0	0	0	0	0	0
2005	0	0	0	0	0	0
2006	0	0	0	0	0	0
2007	0	0	0	0	0	0
2008	0	0	0	0	0	0
2009	0	0	0	0	0	0
2010	0	0	0	0	0	0

Although none of measures passed the Rate Impact Test to qualify as cost-effective, OUC proposes the continuation of OUC's existing programs. The programs are described in Section 7.0.

Rate Impact Test

RATE IMPACT TEST PROGRAM: Low Income Energy Fix Up

Input Data

PROGRAM: Res Efficiency Water Heating

I. PROGRAM DEMAND SAVINGS AND LINE LOSSES

(1) CUSTOMER KW REDUCTION AT THE METER	0.50 KW/CUST
(2) GENERATOR KW REDUCTION PER CUSTOMER	0.54 KW GEN/CUST
(3) KW LINE LOSS PERCENTAGE	8.0 %
(4) GENERATION KWH REDUCTION PER CUSTOMER	702.1 KWH/CUST/YR
(5) KWH LINE LOSS PERCENTAGE	6.0 %
(6) GROUP LINE LOSS MULTIPLIER	1.0034
(7) CUSTOMER KWH PROGRAM INCREASE AT METER	0.0 KWH/CUST/YR
(8)* CUSTOMER KWH REDUCTION AT METER	660.0 KWH/CUST/YR

II. ECONOMIC LIFE AND K FACTORS

(1) STUDY PERIOD FOR CONSERVATION PROGRAM	20 YEARS
(2) GENERATOR ECONOMIC LIFE	25 YEARS
(3) T & D ECONOMIC LIFE	25 YEARS
(4) K FACTOR FOR GENERATION	1.27
(5) K FACTOR FOR T & D	1.27
(6)* SWITCH REV REQ(0) OR VAL-OF-DEF (1)	1

III. UTILITY AND CUSTOMER COSTS

(1)** UTILITY NONRECURRING COST PER CUSTOMER	0.00 \$/CUST
(2)** UTILITY RECURRING COST PER CUSTOMER	0.00 \$/CUST/YR
(3) UTILITY COST ESCALATION RATE	3.0 %
(4) CUSTOMER EQUIPMENT COST	800.00 \$/CUST
(5) CUSTOMER EQUIPMENT ESCALATION RATE	3.0 %
(6) CUSTOMER O & M COST	0.00 \$/CUST/YR
(7) CUSTOMER O & M ESCALATION RATE	3.0 %
(8)* CUSTOMER TAX CREDIT PER INSTALLATION	0.00 \$/CUST
(9)* CUSTOMER TAX CREDIT ESCALATION RATE	3.0 %
(10)* INCREASED SUPPLY COSTS	0.00 \$/CUST/YR
(11)* SUPPLY COSTS ESCALATION RATE	3.0 %
(12)* UTILITY DISCOUNT RATE	5.50 %
(13)* UTILITY AFUDC RATE	5.50 %
(14)* UTILITY NON RECURRING REBATE/INCENTIVE	53.05 \$/CUST
(15)* UTILITY RECURRING REBATE/INCENTIVE	0.00 \$/CUST/YR
(16)* UTILITY REBATE/INCENTIVE ESCAL RATE	0.0 %

* SUPPLEMENTAL INFORMATION NOT SPECIFIED IN WORKBOOK

** NONRECURRING & RECURRING COSTS IN INPUTS III (1 & 2) DO NOT INCLUDE CUSTOMER REBATES PAID BY THE UTILITY. UTILITY REBATES ARE INPUT IN III (14 & 15)

IV. AVOIDED GENERATOR, TRANS. AND DIST. COSTS

(1) BASE YEAR	2001
(2) IN-SERVICE YEAR FOR AVOIDED GENERATING UNIT	2004
(3) IN-SERVICE YEAR FOR AVOIDED T & D	2004
(4) BASE YEAR AVOIDED GENERATING UNIT COST	372.7684 \$/KW
(5) BASE YEAR AVOIDED TRANSMISSION COST	78.78243 \$/KW
(6) BASE YEAR DISTRIBUTION COST	56.28075 \$/KW
(7) GEN, TRAN, & DIST COST ESCALATION RATE	3 %
(8) GENERATOR FIXED O & M COST	5.007448 \$/KW/YR
(9) GENERATOR FIXED O&M ESCALATION RATE	3 %
(10) TRANSMISSION FIXED O & M COST	3.07661 \$/KW/YR
(11) DISTRIBUTION FIXED O & M COST	14.64042 \$/KW/YR
(12) T&D FIXED O&M ESCALATION RATE	3 %
(13) AVOIDED GEN UNIT VARIABLE O & M COSTS	0.194145 CENTS/KWH
(14) GENERATOR VARIABLE O&M COST ESCALATION RATE	3 %
(15) GENERATOR CAPACITY FACTOR	85 %
(16) AVOIDED GENERATING UNIT FUEL COST	1.933917 CENTS/KWH
(17) AVOIDED GEN UNIT FUEL ESCALATION RATE	3.17 %
(18)* AVOIDED PURCHASE CAPACITY COST PER KW	0 \$/KW/YR
(19)* CAPACITY COST ESCALATION RATE	3 %

V. NON-FUEL ENERGY AND DEMAND CHARGES

(1) NON-FUEL COST IN CUSTOMER BILL	5.959 CENTS/KWH
(2) NON-FUEL ESCALATION RATE	3.0 %
(3) CUSTOMER DEMAND CHARGE PER KW	0.00 \$/KW/MO
(4) DEMAND CHARGE ESCALATION RATE	0.0 %
(5)* DIVERSITY and ANNUAL DEMAND ADJUSTMENT FACTOR FOR CUSTOMER BILL	1.0

* FIRE Program Version Number: 1.03

APPENDIX B.2

COMMERCIAL/INDUSTRIAL MEASURES

Input Data

PROGRAM: Updated DLC-1A

I. PROGRAM DEMAND SAVINGS AND LINE LOSSES

(1) CUSTOMER KW REDUCTION AT THE METER	2.24 KW/CUST
(2) GENERATOR KW REDUCTION PER CUSTOMER	2.43 KW GEN/CUST
(3) KW LINE LOSS PERCENTAGE	8.0 %
(4) GENERATION KWH REDUCTION PER CUSTOMER	0.0 KWH/CUST/YR
(5) KWH LINE LOSS PERCENTAGE	6.0 %
(6) GROUP LINE LOSS MULTIPLIER	1.0034
(7) CUSTOMER KWH PROGRAM INCREASE AT METER	0.0 KWH/CUST/YR
(8)* CUSTOMER KWH REDUCTION AT METER	0.0 KWH/CUST/YR

II. ECONOMIC LIFE AND K FACTORS

(1) STUDY PERIOD FOR CONSERVATION PROGRAM	20 YEARS
(2) GENERATOR ECONOMIC LIFE	25 YEARS
(3) T & D ECONOMIC LIFE	25 YEARS
(4) K FACTOR FOR GENERATION	1.27
(5) K FACTOR FOR T & D	1.27
(6)* SWITCH REV REQ(0) OR VAL_OF_DEF (1)	1

III. UTILITY AND CUSTOMER COSTS

(1)** UTILITY NONRECURRING COST PER CUSTOMER	219.54 \$/CUST
(2)** UTILITY RECURRING COST PER CUSTOMER	47.13 \$/CUST/YR
(3) UTILITY COST ESCALATION RATE	3.0 %
(4) CUSTOMER EQUIPMENT COST	0.00 \$/CUST
(5) CUSTOMER EQUIPMENT ESCALATION RATE	3.0 %
(6) CUSTOMER O & M COST	0.00 \$/CUST/YR
(7) CUSTOMER O & M ESCALATION RATE	3.0 %
(8)* CUSTOMER TAX CREDIT PER INSTALLATION	0.00 \$/CUST
(9)* CUSTOMER TAX CREDIT ESCALATION RATE	3.0 %
(10)* INCREASED SUPPLY COSTS	0.00 \$/CUST/YR
(11)* SUPPLY COSTS ESCALATION RATE	3.0 %
(12)* UTILITY DISCOUNT RATE	5.50 %
(13)* UTILITY AFUDC RATE	5.50 %
(14)* UTILITY NON RECURRING REBATE/INCENTIVE	0.00 \$/CUST
(15)* UTILITY RECURRING REBATE/INCENTIVE	57.31 \$/CUST/YR
(16)* UTILITY REBATE/INCENTIVE ESCAL RATE	0.0 %

* SUPPLEMENTAL INFORMATION NOT SPECIFIED IN WORKBOOK

** NONRECURRING & RECURRING COSTS IN INPUTS III.(1 & 2) DO NOT INCLUDE CUSTOMER REBATES PAID BY THE UTILITY. UTILITY REBATES ARE INPUT IN III.(14 & 15)

IV. AVOIDED GENERATOR, TRANS. AND DIST. COSTS

(1) BASE YEAR	2001
(2) IN-SERVICE YEAR FOR AVOIDED GENERATING UNIT	2004
(3) IN-SERVICE YEAR FOR AVOIDED T & D	2004
(4) BASE YEAR AVOIDED GENERATING UNIT COST	372.7684 \$/KWH
(5) BASE YEAR AVOIDED TRANSMISSION COST	78.78243 \$/KWH
(6) BASE YEAR DISTRIBUTION COST	56.28075 \$/KWH
(7) GEN, TRAN, & DIST COST ESCALATION RATE	3 %
(8) GENERATOR FIXED O & M COST	5.007448 \$/KWH/YR
(9) GENERATOR FIXED O&M ESCALATION RATE	3 %
(10) TRANSMISSION FIXED O & M COST	3.07661 \$/KWH/YR
(11) DISTRIBUTION FIXED O & M COST	14.64042 \$/KWH/YR
(12) T&D FIXED O&M ESCALATION RATE	3 %
(13) AVOIDED GEN UNIT VARIABLE O & M COSTS	0.194145 CENTS/KWH
(14) GENERATOR VARIABLE O&M COST ESCALATION RATE	3 %
(15) GENERATOR CAPACITY FACTOR	85 %
(16) AVOIDED GENERATING UNIT FUEL COST	1.933917 CENTS/KWH
(17) AVOIDED GEN UNIT FUEL ESCALATION RATE	3.17 %
(18)* AVOIDED PURCHASE CAPACITY COST PER KW	0 \$/KW/YR
(19)* CAPACITY COST ESCALATION RATE	3 %

V. NON-FUEL ENERGY AND DEMAND CHARGES

(1) NON-FUEL COST IN CUSTOMER BILL	5.959 CENTS/KWH
(2) NON-FUEL ESCALATION RATE	3.0 %
(3) CUSTOMER DEMAND CHARGE PER KW	0.00 \$/KW/MO
(4) DEMAND CHARGE ESCALATION RATE	0.0 %
(5)* DIVERSITY and ANNUAL DEMAND ADJUSTMENT FACTOR FOR CUSTOMER BILL	1.0

* FIRE Program Version Number: 1.03
