

BEFORE THE  
FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 080001-EI

In the Matter of:

FUEL AND PURCHASED POWER COST  
RECOVERY CLAUSE WITH GENERATING  
PERFORMANCE INCENTIVE FACTOR.

-----/

PROCEEDINGS:           AGENDA CONFERENCE  
ITEM NO. 11

BEFORE:                 CHAIRMAN MATTHEW M. CARTER, II  
COMMISSIONER LISA POLAK EDGAR  
COMMISSIONER KATRINA J. McMURRIAN  
COMMISSIONER NANCY ARGENZIANO  
COMMISSIONER NATHAN A. SKOP

DATE:                    Tuesday, September 16, 2008

PLACE:                   Betty Easley Conference Center  
Room 148  
4075 Esplanade Way  
Tallahassee, Florida

REPORTED BY:           JANE FAUROT, RPR

PARTICIPATING:

JOHN T. BUTLER, ESQUIRE, and SAM FOREST, representing Florida Power & Light Company.

JOE McGLOTHLIN, ESQUIRE, Office of Public Counsel representing the Citizens of the State of Florida.

MICHAEL COOKE, GENERAL COUNSEL, LISA BENNETT, ESQUIRE, PETE LESTER, and BILL McNULTY, representing the Florida Public Service Commission Staff.

## P R O C E E D I N G S

1  
2           **CHAIRMAN CARTER:** And with that, Commissioners,  
3 we are now on Item 11.

4           **MR. LESTER:** Good morning, Commissioners.

5           **CHAIRMAN CARTER:** Hang on a second. I know  
6 you're ready to go. Just one second.

7           Staff, you're recognized.

8           **MR. LESTER:** Good morning, Commissioners. I'm  
9 Pete Lester with staff.

10           Item 11 concerns FPL's petition for voluntary  
11 withdrawal of its improved volatility mitigation mechanism  
12 petition, which was known as the VMM petition. And FPL's  
13 petition also proposes hedging order clarification  
14 guidelines.

15           At the April 22nd agenda conference, the  
16 Commission considered the VMM petition and determined the  
17 period of review for hedging transactions to be through  
18 July 31st of the current year. The Commission also  
19 deferred consideration of the VMM petition in its  
20 alternative to allow for completion of staff audits and to  
21 allow workshops. The audits are now complete and staff  
22 has met several times with FPL and parties.

23           For Issue 1, staff recommends that the  
24 Commission acknowledge FPL's voluntary withdrawal of the  
25 VMM petition. Regarding Issue 2, FPL's proposed hedging

1 order clarification guidelines provide that the Commission  
2 will approve each electric utility's risk management plan  
3 at the annual fuel hearing and this will guide the  
4 Commission's determination of prudence of hedging  
5 activities the following year. Progress Energy Florida,  
6 Tampa Electric Company, and Gulf Power Company support the  
7 guidelines. The Office of Public Counsel opposes the  
8 guidelines and has provided comments.

9 Staff recommends that the Commission approve  
10 FPL's proposed hedging order clarification guidelines. In  
11 doing so, the Commission will demonstrate its support for  
12 hedging and will retain its discretion to determine the  
13 prudence of hedging results.

14 Staff has the following corrections or revisions  
15 to the recommendation, and the first is on Page 4, and it  
16 would be the first full paragraph and the fifth sentence  
17 in that paragraph. Insert the word "Gulf" after "TECO  
18 and". In the same paragraph, in the seventh sentence,  
19 insert the word "Gulf" after "TECO and". And the last one  
20 is on Page 8, it is in the section entitled Sections 2 and  
21 3. In the last sentence, the phrase "the previous  
22 calendar year" should be replaced with "August 1 to  
23 December 31 of the prior year (in 2009, the report will  
24 cover all of calendar year 2008)".

25 **CHAIRMAN CARTER:** Commissioners, were you able

1 to get that? You may proceed.

2 **MR. LESTER:** I believe representatives of FPL  
3 and OPC are present and staff is available for questions.

4 **CHAIRMAN CARTER:** Are those the only -- are  
5 those all of the scrivener corrections and revisions?

6 **MR. LESTER:** We had several more, they were  
7 minor. We just focused on the --

8 **CHAIRMAN CARTER:** Okay. Let's hear from the  
9 parties.

10 **MR. BUTLER:** Thank you, Mr. Chairman. Good  
11 morning. My name is John Butler, Counsel for FPL. With  
12 me this morning is Sam Forest (phonetic), FPL's Vice  
13 President of Energy Marketing and Trading, which is the  
14 business unit responsible for developing and implementing  
15 FPL's hedging plans.

16 First, I would like to say we are very pleased  
17 with staff's recommendation on FPL's proposed hedging  
18 guidelines, and we respectfully request that the  
19 Commission approve the recommendation in its entirety.  
20 The Commission approved a stipulation in 2002 that  
21 established the current framework for FPL, or, I'm sorry,  
22 for IOU hedging programs. The stipulation had broad  
23 support from all stakeholders, including OPC at the time.  
24 IOUs have hedged pursuant to the 2002 stipulation for  
25 several year now.

1           It has become apparent, however, that  
2 stakeholder support has been much stronger for hedging  
3 when it results in gains than when it results in losses,  
4 even though both outcomes are expected and inevitable as  
5 volatility is controlled over time. IOU shareholders  
6 receive no special benefit or reward for hedging gains,  
7 but this observed asymmetry and the reaction to hedging  
8 when it is gains versus losses raises concerns that they  
9 might be penalized for hedging losses. This asymmetry can  
10 increase perceived financial risk and ultimately the IOUs'  
11 cost of capital.

12           FPL's proposed hedging guidelines are intended  
13 to clarify and refine the 2002 stipulation in order to  
14 reduce that risk. The proposed guidelines do so not by  
15 insulating IOUs from scrutiny, but rather by establishing  
16 a better framework for prospectively and collaboratively  
17 establishing detailed hedging plans that will guide both  
18 the IOUs in implementing their hedging activities and the  
19 Commission in reviewing the results.

20           The proposed hedging guidelines we are looking  
21 at here are the product of a full and active collaboration  
22 with staff and the parties to this docket. FPL originally  
23 filed a form of hedging guidelines as an alternative in  
24 its VMM petition in the end of January of this year, over  
25 seven months ago. The current guidelines that we are

1 seeking approval for today are a direct outgrowth of the  
2 guidelines that we proposed in January, but they have been  
3 refined to address comments and concerns of staff as well  
4 as the parties.

5           As noted in the staff recommendation, the  
6 guidelines were vetted at workshops and conference calls  
7 that staff held on four separate occasions extending from  
8 early June through late August. FPL refined the  
9 guidelines to respond to specific comments on them from  
10 all of the participants in those workshops, including OPC.

11           Page 11 of the staff recommendation suggests  
12 some minor wording changes to clarify certain points in  
13 the guidelines. FPL circulated revisions to the  
14 guidelines on Monday of last week that addressed staff's  
15 suggestions and has confirmed that all of the IOUs support  
16 those revisions.

17           The IOUs' use of hedging has been carefully  
18 evaluated by staff through a pair of audits that were  
19 conducted to assess the costs and benefits of the hedging  
20 programs, and it confirmed that the IOUs 2007 hedging  
21 activities were consistent with their hedging plans. At  
22 the April 22 agenda conference, you deferred consideration  
23 of our VMM petition until those audits were completed.  
24 They have now been completed. The management audit was  
25 completed in June and found that, quote, the use of

1 financial hedges for fuel purchases provides a benefit to  
2 customers. Each IOU's hedging program is appropriately  
3 controlled, efficiently organized, and operates under a  
4 nonspeculative format, end quote.

5 The financial audits were completed in May 2008,  
6 and identified no problems with the IOUs' implementation  
7 of their 2007 hedging activities. The auditors found that  
8 those activities were conducted consistent with applicable  
9 Commission orders and rules and with applicable FASB  
10 standards.

11 The time is right to approve the hedging  
12 guidelines now so that they may be applied to the review  
13 of hedging programs starting with this year's fuel  
14 adjustment proceedings. Let me explain kind of why it is  
15 important to have that approval today so we can move  
16 forward with review of the hedging plans at the  
17 November 2008 fuel hearings. In the first half of the  
18 calendar year, IOUs typically begin placing hedges for the  
19 following year and beyond. This means that if IOUs are  
20 going to be able to rely on the hedging guidelines for  
21 hedges to be placed in 2009, the guidelines need to be  
22 approved now.

23 FPL sees no meaningful benefit from further  
24 delay in approving the guidelines. As I mentioned  
25 earlier, the guidelines have been fully vetted by staff

1 and all parties over a period of more than seven months.  
2 Both the general appropriateness of hedging and its  
3 specific application by individual IOUs have been  
4 carefully scrutinized by the staff audits. There is  
5 nothing further to review about the guidelines or about  
6 hedging generally that requires further review or debate.

7           Last, I would like to respond briefly to  
8 objections that OPC has filed, because I don't believe any  
9 of those objections withstands scrutiny or would warrant  
10 either denying or postponing further approval of the  
11 guidelines. OPC's first objection is that there are no  
12 demonstrable benefits to hedging. This is directly at  
13 odds with staff's audit findings which said, quote, the  
14 use of financial hedges provides a benefit to customers,  
15 end quote. And, quote, generally each company has  
16 successfully mitigated the price volatility for its  
17 customers, end quote. That being exactly the benefit  
18 hedging is intended to provide. It is also directly at  
19 odds with the conclusions in staff's recommendation that  
20 says, quote, hedging has contributed to the stability of  
21 fuel factors, end quote.

22           Staff also correctly points out that hedges have  
23 reduced the need for midcourse corrections. We have had  
24 far fewer of them the last few years, and most recently  
25 significantly reduced the magnitude of the underrecoveries

1 that were the source of the midcourse corrections this  
2 summer. Speaking for FPL, I can say that the midcourse  
3 correction we sought was several hundreds of million of  
4 dollars less than it would have had to be if we had not  
5 had hedges in place for the 2008 fuel costs.

6           OPC claims that while hedging mitigates the  
7 volatility in fuel prices, it is not having much of an  
8 impact on the fuel factors that are charged to customers.  
9 However, this is simply not correct. FPL has performed a  
10 quantitative analysis using a principle familiar in  
11 statistics called the standard deviation, and the standard  
12 deviation without hedging is -- excuse me, stated the  
13 other way around, the standard deviation with hedging is  
14 only about two-thirds as large as it would be without  
15 hedging. Another measure that hedging is, in fact,  
16 accomplishing what it is intended to accomplish, which is  
17 to control the volatility in what customers pay.

18           OPC next claims that the cost of hedging has not  
19 been quantified, but could be substantial. This is,  
20 again, at odds with the audit findings in the staff  
21 recommendation. The management audit found that direct  
22 hedging transaction costs are minimal or nonexistent. OPC  
23 is focused on the comment in FPL's initial VMM petition  
24 that indirect transaction costs could be substantial.  
25 However, as staff correctly notes, FPL subsequently

1 explained the indirect transaction costs are theoretical  
2 or potential. Depending on the relative potential or  
3 position of buyers and sellers in the fuel markets, the  
4 indirect costs could add at most a small amount to total  
5 fuel costs on the order of a couple of hundredths of one  
6 percent, and they might even be negative so that they  
7 would reduce total fuel costs. It all depends period to  
8 period on the relative position of buyers and sellers.

9           Finally, staff correctly points out that  
10 incremental hedging O&M costs are not significant relative  
11 to IOUs' total fuel costs. For example, FPL has projected  
12 2009 incremental hedging O&M costs of about \$695,000  
13 compared to total projected fuel and purchased power costs  
14 about \$6.9 billion. That is only about 1/100th of one  
15 percent.

16           OPC's third claim is that IOUs somehow benefit  
17 from their hedging programs. This is, again, unfounded.  
18 Under the Commission's fuel adjustment mechanism, IOUs  
19 recover their exact fuel costs, nothing more and nothing  
20 less. The same is true for all types of hedging costs.  
21 There is no opportunity under the Commission's fuel  
22 adjustment mechanism for IOUs to retain any portion of  
23 whatever gain may result from hedges when they are placed.

24           OPC suggests that IOUs benefit from a more  
25 stable cash flow and predictable earnings as a result of

1 hedging. However, at the same time, OPC ignores the  
2 substantial asymmetric risk that IOUs face as a result of  
3 their hedging programs that I spoke to earlier. To the  
4 extent that there are any impacts on an IOU's ROE  
5 requirements from either the existence of this asymmetric  
6 risk or from the proposed hedging guidelines mitigating  
7 that risk, we agree with staff that those impacts would be  
8 properly addressed in a base rate proceeding.

9           Finally, OPC asserts that the hedging guidelines  
10 somehow curtail or interfere with the Commission's ability  
11 to review the prudence of IOU hedging activities. Really,  
12 nothing could be further from the truth. The hedging  
13 guidelines would actually substantially improve the  
14 Commission's review of hedging activities in two important  
15 ways.

16           First, the guidelines contemplate the filing of  
17 detailed risk management plans for hedges to be placed in  
18 the upcoming year early enough for those plans to be  
19 reviewed and approved before they have had to be  
20 implemented. Subject to appropriate confidentiality  
21 protections, the plans will be accessible to OPC and other  
22 parties as well as the Commission. The guidelines will,  
23 therefore, facilitate a much more complete, open, and  
24 collaborative debate about how hedging programs should  
25 function in the upcoming year.

1           And, second, the guidelines provide explicitly  
2 for an IOU's hedging results to be measured against its  
3 approved plan. This will provide a context and framework  
4 for prudence reviews. FPL does not believe that anyone  
5 benefits from an unstructured review process. It creates  
6 unnecessary uncertainty for the IOUs, and for the  
7 Commission and the parties it makes it difficult to  
8 articulate and apply an appropriate and consistent  
9 standard for the review.

10           So we have guidelines that have been thoroughly  
11 vetted, input from all parties refined to reflect that  
12 input. It would be very useful for them to be approved  
13 now so that we can actually start using them to have --  
14 excuse me, review of hedging plans for next year reviewed  
15 as part of this year's fuel cycle. There is nothing  
16 significant to be gained from either deferring a decision  
17 or from hearings on something that has been that  
18 thoroughly vetted. And for these reasons we, again, urge  
19 you to approve staff's recommendation in its entirety.

20           And Mr. Forest and I are available for any  
21 questions that you may have.

22           **CHAIRMAN CARTER:** Thank you. Mr. Wright, are  
23 you part of this?

24           **MR. WRIGHT:** Mr. McGlothlin is going to present.

25           **CHAIRMAN CARTER:** No, no, that's not my

1 question. I am going to Mr. McGlothlin next, but I was  
2 going to come to you last if you are a part of this.

3 **MR. WRIGHT:** No, I don't intend to speak other  
4 than to support Public Counsel. Thank you.

5 **CHAIRMAN CARTER:** Okay. Mr. McGlothlin, you're  
6 recognized.

7 **MR. McGLOTHLIN:** Joe McGlothlin with the Office  
8 of Public Counsel. I apologize for my lack of voice this  
9 morning. I hope you will bear with me as I speak through  
10 my cold. And perhaps --

11 **CHAIRMAN CARTER:** Did you say something?

12 (Laughter.)

13 **MR. McGLOTHLIN:** It's a form of reassurance that  
14 I'm not going to talk a long time this morning. In  
15 January of this year, Florida Power and Light Company  
16 filed what it called its improved volatility mitigation  
17 mechanism. And it proposed to improve the volatility  
18 mitigation mechanism by unwinding its hedging transactions  
19 and asked the Commission to support that endeavor.

20 In the course of that petition, its primary  
21 contention was that hedging does not mitigate volatility  
22 perceived by the customer materially beyond that which is  
23 already accomplished by the levelized fuel cost-recovery  
24 factor. As you're aware, when the Commission sets the  
25 fuel factor for the upcoming year, it divides the total

1 annual fuel expenses by 12 and sets a constant fuel  
2 cost-recovery factor that appears on the customer's bill  
3 for each month during that period, absent some  
4 extraordinary circumstances like a midcourse correction.  
5 And FPL provided exercises which demonstrated that when  
6 you compare the impact of this levelized mechanism on a  
7 customer's bill with the impact of the levelized fuel  
8 factor plus the hedging transactions, the hedging adds  
9 very little to the protection against volatility that the  
10 customers already see in the form of the levelized factor.

11           Their second point is that along with this  
12 dubious value of hedging in terms of mitigating the  
13 volatility seen by the customer on their bills, the  
14 hedging transactions cause the companies, and through the  
15 companies the customers to incur inevitable -- that's  
16 their word, inevitable direct and indirect costs. And  
17 with respect to the indirect costs, they said that those  
18 costs are difficult to quantify, but could be quite  
19 substantial.

20           In September of this year, Florida Power and  
21 Light Company filed the petition that they're supporting  
22 today. And in that petition they asked the Commission to  
23 reaffirm its support for hedging as a valuable and  
24 effective means of mitigating volatility seen by  
25 customers. On the surface that seems to be quite a

1 contradiction, but there's something that is a constant in  
2 both efforts. FPL is quite up front about it. FPL's  
3 primary objective in the January petition and the  
4 September petition is to reduce its regulatory risk.

5           Now, let's take a moment and consider what is  
6 the regulatory risk that FPL wants to reduce. Regulatory  
7 risk is the possibility or the potential that the  
8 Commission could disallow some portion of a request from  
9 being borne by customers. To the company and investors  
10 that's a risk. To the customers that is the primary tool  
11 in place to protect customers from what would otherwise be  
12 a monopoly situation.

13           And bear in mind that this mechanism of guarding  
14 ratepayers from imprudent actions and/or unreasonable  
15 costs is something of a continuum. You cannot accede to  
16 request to reduce regulatory risk without diminishing your  
17 ability to protect customers against potentially imprudent  
18 actions and/or unreasonably higher costs. And so when  
19 they ask you to consider a reduction of risk, you have to  
20 take that as a very serious matter and one that bears on  
21 your ultimate responsibility.

22           Now, they say that you should do this because  
23 uncertainty and regulatory risk increase the cost of  
24 capital. Bear in mind that when investors review a  
25 utility's risk profile, they look at the entire profile.

1 And when they look at Florida Power and Light Company,  
2 they will see, among other things, I can't list all of  
3 them, they will see a monopoly, no competition for the  
4 retail business. They will see ratemaking mechanisms that  
5 include the ability to ask for and receive within 60 days  
6 interim rates if they are warranted. They will see a fuel  
7 cost-recovery clause that enables them to collect their  
8 fuel costs on a current basis with a true-up. They will  
9 see a conservation cost-recovery clause and an  
10 environmental cost-recovery clause. They will see cases  
11 in which the Commission has been responsive to requests to  
12 enable them to recover storm-related expenses in a timely  
13 station. And so they will see a host of things which when  
14 you add them up would lead a company in a competitive  
15 business to say where can I sign up for risks like that.

16 So when they say -- when they point to a single  
17 component and say, oh, that is a source of risk, you have  
18 to bear in mind the overall risk picture and risk profile  
19 which under Florida regulation is in many ways favorable  
20 to the utilities.

21 Now, today FPL says it's withdrawing its  
22 petition for an improved volatility mitigation mechanism.  
23 It can withdraw its petition, but it can't withdraw the  
24 facts, which as John Adams famously said are stubborn  
25 things. And the facts which they supplied in support of

1 that January petition we found to be quite persuasive in  
2 terms of the limited benefits that hedging provides in  
3 terms of protection against volatility seen by customers.  
4 And for that reason we think that the Commission should  
5 not agree to the proposed guidelines without considering  
6 after six years of experience from its 2002 order whether  
7 hedging truly performs in the way it anticipated at the  
8 time, or whether it has, as was described in the January  
9 petition, a set of unquantified costs and very limited  
10 benefits.

11 On the other hand, if after investigating the  
12 value of hedging, the Commission determines that it is a  
13 worthwhile endeavor, we would continue to oppose the  
14 guidelines in their current form because they do have the  
15 effect of reducing protection available to customers.

16 Now, bear in mind when we talk about regulatory  
17 risk, we are talking about the Commission's review of  
18 actions to determine whether they are imprudent and costs  
19 to determine whether they are reasonable. And in  
20 performing that function the Commission always applies the  
21 same prudence test. And the Commission has been careful  
22 never to use hindsight and never to second guess the  
23 utilities, and so the possibility of applying that test to  
24 some big numbers as to small numbers is not in itself a  
25 source of risk if the Commission acts on the evidence and

1 applies the right test. And so we think the risk  
2 perceived by FPL is overstated for that reason.

3           Mr. Butler referred to statements in the audit  
4 and in the staff recommendation which support the  
5 proposition that there are benefits. But from the word  
6 go, from the year 2002 forward, the mantra of the  
7 utilities has been over the longhaul gains and losses will  
8 offset themselves. That over the longhaul there would be  
9 a wash. And to say that you can look at a particular  
10 period of time and say, aha, there are some benefits,  
11 there are some gains, flies in the face of the overall  
12 proposition which is that over the longhaul there is going  
13 to be offsetting gains and losses. And if that is true,  
14 if that is valid, then it's simply impossible to look at a  
15 snapshot in time and say, well, this proves that hedging  
16 is worthwhile.

17           On the other hand, if the application of the  
18 hedging transactions can be and should be to lower fuel  
19 costs, which seems to be the suggestion in FPL's  
20 presentation, that's another reason why the Commission  
21 should maintain and reserve its ability to review this  
22 transaction for prudence and effectiveness. With respect  
23 to the contention that the guidelines would lower FPL's  
24 cost of capital, from time to time that contention is  
25 made, but it never seems to be translated into a lower

1 required rate of return, or lower rates necessary to  
2 achieve that return so that the customers never seem to  
3 catch up to realize that benefit.

4 Those are my comments. Thanks for your  
5 attention, and I will answer any questions.

6 **CHAIRMAN CARTER:** Thank you, Mr. McGlothlin.

7 Commissioners? Commissioner McMurrin, you're  
8 recognized.

9 **COMMISSIONER McMURRIAN:** And I'm probably not  
10 organized, so I will try a couple, and maybe I'll have  
11 some after.

12 I guess it is best to start out asking FPL this,  
13 or maybe staff, too. With respect to the plans that will  
14 be filed, will you be filing a plan every year, or will  
15 you be filing a plan one year and asking for approval and  
16 you will follow that until you see some need to change the  
17 plan?

18 **MR. BUTLER:** The expectation would be that the  
19 plans be filed every year. I suppose a utility could do  
20 no more than confirm that it intended to continue  
21 implementing on the same terms as it had the year before  
22 if it didn't intend to make any changes, but under the  
23 mechanism we envision with the guidelines there would be a  
24 filing each year.

25 **COMMISSIONER McMURRIAN:** And I guess this is for

1 staff. Mr. McNulty, if we approve the plan and that gives  
2 the IOU the green light to pursue the hedging plan that  
3 they have laid out and the Commission would have approved,  
4 but the prudence determination would still come after  
5 that, right? I mean, wouldn't you still be looking at the  
6 period that the hedging costs and all were subject to  
7 recovery? When that full period was closed, wouldn't you  
8 be making a prudence determination at that time? And I  
9 guess this goes to the things that Mr. McGlothlin has  
10 raised, and I don't mind him jumping in, either. But I  
11 want to get straight in whether or not we are doing a  
12 prudence review, because my understanding was that we were  
13 still doing that.

14 **MR. McNULTY:** Yes, Commissioner, you would be  
15 doing a prudence review at the time that you received the  
16 results of the hedging program. And that prudence review  
17 will be tempered, if you will, by the fact that a plan has  
18 been set forth that the Commission has approved. You  
19 would be evaluating whether or not the company stayed  
20 within the parameters of the plan, or if they deviated  
21 from the plan, if it was a justifiable case to do so. So  
22 the plan set forth sort of a guideline for evaluating the  
23 result that would be received later. That's the staff's  
24 perspective of the regulatory process that would ensue  
25 from the approval of plans in advance as is suggested in

1 the guidelines.

2           **COMMISSIONER McMURRIAN:** So the approval of the  
3 plan would be more significant than, like, the process we  
4 use for the Ten-Year Site Plan, for instance. We find it  
5 appropriate for planning purposes, but, of course, the  
6 utilities aren't held to everything they have put in that  
7 just because the plan was appropriate and things change.  
8 You are saying with respect to these plans that it would  
9 be -- what they actually do, we would be comparing that to  
10 what they laid out in the plan, what the Commission  
11 approved, and you would be trying to make sure that they  
12 had followed the plan that the Commission approved, would  
13 be more of the --

14           **MR. McNULTY:** Yes, Commissioner. I do believe  
15 it has more weight than Ten-Year Site Plans.

16           **COMMISSIONER McMURRIAN:** Okay. I think that is  
17 it for now, Mr. Chairman. I think I have some more, but I  
18 will come back.

19           **CHAIRMAN CARTER:** I will come back to you.  
20 Commissioner Edgar and then Commissioner  
21 Argenziano.

22           **COMMISSIONER EDGAR:** Thank you. And my  
23 questions are actually more general and a little  
24 overarching, and then I am going to drill in a little bit  
25 further.

1           But, first of all, I was going to maybe suggest,  
2 Mr. Chairman, of course, it's up to your discretion if it  
3 might be useful to dispose of Issue 1. It seems like we  
4 have kind of moved beyond that, but we can certainly wait  
5 until the end, whatever is your pleasure.

6           But I also wanted to -- I thought I understood  
7 what was before us. And then from the comments that I  
8 have heard from both FPL and from OPC, I had to go back  
9 and look at the issues a little more specifically, because  
10 I feel like what I was hearing from both of you was --  
11 well, from FPL was kind of a request, my words, but I look  
12 for you to correct me or clarify, but more of an  
13 endorsement or a continuation of the hedging order and the  
14 hedging program. And from OPC some real questions raised  
15 as to the hedging program overall and the benefits or lack  
16 of benefits. And you made some specific comments that I  
17 will go into a little later. But yet my understanding of  
18 what is before us is to specifically approve or not  
19 approve guidelines to clarify. And so I just got -- so I  
20 guess I would ask each of you if you could to see what is  
21 the issue that you see before us today.

22           **MR. BUTLER:** Commissioner, from FPL's  
23 perspective, I think the way you have characterized it was  
24 accurate. We do not view the issue of whether hedging  
25 should continue as being part of what we are petitioning

1 to have approved. In our minds that is something that  
2 exists now. It's a mechanism that all of the utilities  
3 have been using. It was pursuant to the 2002 stipulation,  
4 and we are really looking to have the Commission approve  
5 these hedging guidelines that fundamentally do two things.  
6 I think one of them is process, one of them more  
7 substantive.

8           The substantive part is just setting out a set  
9 of principles that the Commission and the parties would  
10 look to in evaluating the plans and then determining  
11 whether the plans are consistent with -- and their  
12 implementation consistent with what everybody expects.  
13 And then the procedural part of it is kind of what  
14 Commissioner McMurrian was referring to that you have this  
15 process of filing plans up front, get some review and  
16 consensus that they should be implemented, and then after  
17 the fact look and see whether the utilities have  
18 implemented what they said they were going to do.

19           But that's it. I responded to questions or  
20 concerns raised by Office of Public Counsel about hedging,  
21 but it's not part of our petition kind of whether the  
22 issue of continuing hedging is something that needs to be  
23 decided today.

24           **COMMISSIONER EDGAR:** Mr. McGlothlin.

25           **MR. MCGLOTHLIN:** The request to discontinue

1 hedging was part of the original January VMM petition that  
2 FPL is withdrawing. And the support provided by FPL with  
3 respect to that original petition we found persuasive, and  
4 we think calls into question the value of hedging as it  
5 relates to the stated objective, which is the mitigation  
6 of fuel cost volatility that appears on customers' bills.  
7 Not to the company, which buys fuel, you know, from  
8 month-to-month and experiences that volatility, but to the  
9 customer who is already insulated by the levelized fuel  
10 factor.

11           And so we question the wisdom of hedging for  
12 this purpose. We question the costs incurred, and we  
13 suggest that it is time, six years having lapsed since the  
14 2002 order, to get one's arms around that subject before  
15 doing anything else.

16           With respect to the guidelines that are the  
17 subject of the newest petition, we see that as an attempt,  
18 another attempt to persuade the Commission to provide  
19 up-front approval, and one does that at the expense of the  
20 greater ability to protect customers and a more typical  
21 after-the-fact prudence review. Of course, utilities  
22 would love to have a situation where everything they do is  
23 considered in advance, approved up front and irrevocably.  
24 But that comes at a cost, and it comes at a cost to the  
25 customers who depend on the Commission to maintain and

1 reserve its ability to review the actions and costs of the  
2 utility in a timely fashion with the purpose of protecting  
3 them from bearing unreasonable costs.

4 **MR. BUTLER:** Commissioner, may I briefly  
5 respond? I'm sorry. Mr. Chairman.

6 **COMMISSIONER EDGAR:** A comment, Mr. Chairman,  
7 and a question to you, I guess, and maybe to our legal  
8 staff. It just seems to me that we are blurring petitions  
9 and requests. And the issue of regulatory certainty, and  
10 the role of prudence review, and all of that is -- quite  
11 frankly, those issues I love to discuss, and I'm  
12 fascinated by, and if that is the discussion for today I  
13 look forward to all of us engaging in it.

14 But from the issues that are before us, it seems  
15 like some of the comments we are hearing are about the  
16 petition filed in January which we have an item before us  
17 to withdraw, and then some of the comments are about a  
18 later petition requesting discussion and potential  
19 approval of the guidelines. And it just seems to me that  
20 from my thinking, anyway, it would be helpful to separate  
21 those. So is it the petition in January that there is an  
22 item to withdraw, is that petition before us, or are we  
23 going to withdraw it, in which case it is not before us  
24 for discussion? I mean, could you or maybe Legal help me  
25 think this through procedurally.

1                   **CHAIRMAN CARTER:** Let's do this. Let's see. In  
2 reference to Issue 1, Commissioners, do you have any  
3 further questions on that or do we need to hear from legal  
4 or staff further on Issue 1? And Issue 1 deals with  
5 whether or not to allow the company to take a voluntary  
6 withdrawal of this petition, and obviously staff has  
7 briefed this issue from a legal standpoint as well as from  
8 a procedural standpoint on that, and I would just kind  
9 of -- let's do that, because it does seem like we are  
10 mixing apples and grapefruits again.

11                   Commissioner Skop, you're recognized, sir.

12                   **COMMISSIONER SKOP:** Thank you, Mr. Chairman.

13                   I tend to agree with Commissioner Edgar with  
14 respect to disposing of Issue 1 just based on the brief  
15 that was provided by staff. The company has a voluntary  
16 right to withdraw a petition, and I think that while the  
17 discussion may be valid, I don't think that that's  
18 relevant to the issue before us on Issue 1.

19                   **CHAIRMAN CARTER:** Commissioners, anything  
20 further on Issue 1?

21                   **COMMISSIONER EDGAR:** If it's appropriate, Mr.  
22 Chairman, I would make a motion that we go ahead and adopt  
23 the staff recommendation on Issue 1 with the additional  
24 comment that I think that may clarify our discussion for  
25 the remaining issues.

1           **CHAIRMAN CARTER:** You're recognized for that  
2 motion.

3           **COMMISSIONER EDGAR:** I make a motion that we  
4 adopt the staff recommendation on Issue 1 with further  
5 discussion on the remaining issues to follow.

6           **COMMISSIONER SKOP:** Second.

7           **CHAIRMAN CARTER:** It has been moved and properly  
8 seconded.

9           Commissioners, anything further on our  
10 discussion on Issue 1, which is whether or not the company  
11 is entitled to a voluntary withdrawal of its original  
12 petition?

13           Hearing none, all of those in favor of the  
14 motion let it be known by the sign of aye.

15           (Simultaneous affirmative vote.)

16           **CHAIRMAN CARTER:** All those opposed, like sign.

17           Now, let's take a moment here. Staff, could you  
18 kind of get us back in the posture so we can -- I think we  
19 got a lot of rhetoric and it kind of threw us off. Let's  
20 kind of put us in the posture of discussing the remainder  
21 of the case here. It did seem that we were far afield  
22 from what I thought we were talking about, but, you  
23 know --

24           **MR. COOKE:** Commissioners, maybe I will take a  
25 shot at it.

1                   **CHAIRMAN CARTER:** Good shot. Mr. Cooke.

2                   **MR. COOKE:** I think that by dealing with Issue  
3 1 it does tend to address some of the Issue raised by Mr.  
4 McGlothlin. I think the question he was raising is with  
5 regard to the entire hedging order and the hedging  
6 program, and I would say on a prospective basis this  
7 Commission can deal with that, but I think having voted to  
8 approve the withdrawal of that petition, perhaps that  
9 issue was put to bed at this point for this proceeding,  
10 for today's agenda.

11                   I also think probably something of that  
12 magnitude is not well teed up for today's discussion. And  
13 I really think there would be potential notice issues, et  
14 cetera. So I would recommend focusing on Issue 2, which  
15 is simply should you or should you not approve the  
16 guidelines to the hedging order that has been proposed by  
17 FPL at this point.

18                   **CHAIRMAN CARTER:** I said I would go to  
19 Commissioner Argenziano, and then I will come back to  
20 Commissioner McMurrian.

21                   Commissioner Argenziano, you're recognized.

22                   **COMMISSIONER ARGENZIANO:** Thank you, Mr.  
23 Chairman.

24                   I think when Commissioner McMurrian had asked a  
25 question to staff the answer was that there would be a

1 prudence determination afterwards. Anyway, I think they  
2 are trying to get to the point that is there a prudence  
3 determination to be had later on. But when I read  
4 through, it seems to me that that prudency determination  
5 would be more topical than it is currently.

6           And I think maybe going back to Mr. McGlothlin's  
7 or OPC's written comments, maybe the question should be,  
8 once again, if I could hear OPC explain to me, I see that  
9 basically what you are saying is that considering this  
10 request would diminish the Commission's ability to gauge  
11 the prudence of the utility's activities. And if you  
12 could better explain to me, am I correct in thinking that  
13 if the guidelines were adopted, the prudency determination  
14 is not as in-depth as it would ordinarily be? Do I have  
15 that wrong?

16           **MR. McGLOTHLIN:** I think the ultimate effect of  
17 that would be that the prudence review would be less  
18 in-depth. You would have less tools at your disposal,  
19 because you would be called upon to approve guidelines up  
20 front which are designed to provide protection to the  
21 company. And then the prudence review in the form that  
22 remains would be one of many subjects to be considered at  
23 the November hearings, which are already piled high with  
24 complicated and time-consuming matters.

25           So I think from the standpoint of moving some of

1 the approval up front to the consideration of the plans  
2 themselves, to the task of dealing with this very complex  
3 subject matter at the same time one is considering already  
4 having a full plate, you squeeze too much into too small a  
5 time frame to ensure that the customers are getting the  
6 depth of review that is warranted.

7 **COMMISSIONER ARGENZIANO:** Mr. Chairman, if I  
8 may. So then the guidelines, if approved, basically when  
9 you get to that point that Commissioner McMurrian had  
10 asked about, it would not be a determination of looking  
11 in-depth of individual items, or however you want to  
12 phrase those, it would be more of did you meet the  
13 guidelines and that's it, is that correct?

14 **MR. MCGLOTHLIN:** That's the way I see it,  
15 Commissioner.

16 **COMMISSIONER ARGENZIANO:** And if I could ask  
17 FPL, what risks -- and forgive me for just asking it  
18 simply. What risks do you see that you are trying to  
19 avoid that do not just fall upon the consumer? I'm trying  
20 to figure out what risk you are trying to avoid.

21 **MR. BUTLER:** Let me put it this way. Here is  
22 what I think we are trying to do. It is a good question  
23 and it is probably a good place for me to try to explain  
24 what we are wanting to accomplish with the process that we  
25 envision here. In our mind, what's wrong with the current

1 state of affairs is not that there is too much prudence  
2 review, it's that it is inadequately structured. That  
3 nobody really knows going into it what the measure of  
4 prudence will be, what the hedging implementation that  
5 would have occurred in the period being reviewed will be  
6 measured against, how you are going to determine whether  
7 it was a good decision or a bad one. In my mind, that  
8 works against both the company and customers. I don't  
9 think anybody benefits from an unstructured sort of ad hoc  
10 prudence review mechanism.

11           What we are trying to substitute is not  
12 something that involves less review. I mean, arguably  
13 there will end up being more review. There will be a  
14 process of reviewing the plans up front. This is  
15 something that is going to be open to staff, to OPC, to  
16 other parties to participate in if they think we are not  
17 going to be doing our hedging properly or that we are  
18 tying our hands inappropriately or whatever their concern  
19 might be. They are free to raise that. And if it is  
20 something of concern to the Commission, that will get  
21 factored in and there will be a revision to the plans that  
22 would be approved.

23           Now, we are not expecting that our plans  
24 automatically would be approved. You may well decide,  
25 staff may decide and you may approve that something

1 different needs to be done about it. But then once that  
2 has happened, you now have a framework by which to review  
3 the actions that are taken. And I think it is really  
4 unfair to try to trivialize that as just determining  
5 whether they comply with the guidelines. I'm sorry, with  
6 the plans that were approved. That can be a very  
7 significant exercise. You have got the matter of whether  
8 the utility followed the specifics of the plan that was  
9 approved, whether the individual quantitative or  
10 qualitative sort of goals for the program have been met in  
11 the implementation of the plan, and you have got the issue  
12 of whether the utility acted properly within the range of  
13 discretion that inevitability is going to exist in any  
14 plan.

15           You are not going to be 100 percent nailed down  
16 as to how the hedging will be accomplished within the  
17 parameters of the plan, but you have got this opportunity  
18 to structure that review. So there are two opportunities.  
19 You have got it up front and then you have afterwards.  
20 When you are looking at it afterwards, you are doing it in  
21 accordance with sort of an agreed set of expectations of  
22 what that plan is going to be.

23           So in our mind really it is a win/win. This is  
24 something that gives a better prudence review that we like  
25 because we are more comfortable, you know, with what it is

1 going to be. I think customers, the Commission, others  
2 should like it because they have got a better opportunity  
3 to say, look, you said exactly you were going to do X and  
4 you did Y, and that is a problem. Right now that is  
5 something that is more ambiguous how it would be applied  
6 working against everybody's interests.

7 **COMMISSIONER ARGENZIANO:** Mr. Chairman. But  
8 with all due respect, and it is not trivializing to try to  
9 find out if the consumers will be affected negatively or  
10 if more risk is going to be put upon the consumers. So  
11 with all due respect, I can still see -- and I understand  
12 the companies wanting certainty in saying, you know, if we  
13 follow this. But I can see there are instances where you  
14 follow guidelines, but yet within those subcategories of  
15 those guidelines maybe you didn't. And how then would  
16 that be questioned if it is nonprudent? And I think it  
17 could be diminishing, and that is what I'm trying to get  
18 to today. Because I understand the need for certainty,  
19 but I also want to make sure.

20 And with all due respect, again, it seems to me  
21 that the companies don't have a lot of risk anymore. The  
22 past bill that passed, I mean, everything is pretty much  
23 risk on the consumer. So I don't want to take any last, I  
24 guess, protections away from the consumer without hurting  
25 the company, also. I want the best for both, but I want

1 to make certain. And I don't feel comfortable yet  
2 thinking that, okay, here is the guidelines, because I  
3 have seen this done before. Here is the guidelines, but  
4 yet when you look into those guidelines there could be  
5 many circumstances that then we cannot question because  
6 you followed those guidelines. And I think that's what  
7 I'm feeling from OPC. And if you can respond and then I  
8 can have OPC maybe get it through this skull here, because  
9 I'm feeling some hesitation about thinking that the  
10 consumer would not be more at risk.

11 **MR. BUTLER:** Well, again, I think, first of all,  
12 one of the benefits is the fact that there has been this  
13 opportunity up front to decide on whether the plan, the  
14 parameters in the plan are what the Commission and other  
15 parties think is appropriate for hedging in the upcoming  
16 period. And that can be at two levels, Commissioner. One  
17 level of it could be that what is specified the Commission  
18 doesn't agree with. You ought to do X rather than Y. The  
19 other might be that the Commission might end up saying  
20 that you either have left yourself too much discretion or  
21 you haven't left yourself enough discretion. We need you  
22 to decide how to implement within these parameters and  
23 that is direction that you could end up providing.

24 So I think that by anything other than kind of a  
25 hindsight after-the-fact, gosh, we wish you had done it

1 differently, this is something that really protects both  
2 sides better because everybody knows what is supposed to  
3 be done, what the range of expected discretionary behavior  
4 is, and then the focus of the review will, again, be on  
5 whether it stayed within the parameters that were  
6 identified, and then specifically focusing down, being  
7 able to narrow in on how the discretion was exercised  
8 within the range that all parties agreed was the proper  
9 sort of area of expertise for the utility to exercise in  
10 applying the parameters.

11           So that is the approach that we envision. And,  
12 really, from my experience with quite a few years of  
13 utility regulation, I mean, it seems to me that the  
14 prudence reviews consistently have worked best when they  
15 are measured against something that people knew sort of  
16 upfront what it was going to be measured against so that  
17 utilities feel some comfort and so that the Commission has  
18 something solid it can point to and say that this was  
19 imprudent because you didn't do something that we all  
20 agreed you were going to do.

21           **CHAIRMAN CARTER:** You're recognized.

22           **COMMISSIONER ARGENZIANO:** My concern is I don't  
23 know that you can all encompass everything that could be  
24 imprudent in a guideline. Now, if I may ask staff, since  
25 the hedging has -- was it six years? Have the companies

1 taken on much risk? Have they lost because of an  
2 imprudent decision or --

3 **MR. McNULTY:** Well, it's variable depending upon  
4 the utility and the time frame in which you --

5 **COMMISSIONER ARGENZIANO:** Well, I mean, let me  
6 ask it this way as plainly as I can, whether imprudent  
7 decisions and were they determined to be imprudent and, of  
8 course, cost the company, were there a lot of those?

9 **MR. McNULTY:** There haven't been as far as I  
10 understand any specific decisions determining imprudence  
11 of the utilities' hedging results.

12 **COMMISSIONER ARGENZIANO:** So, then, what brings  
13 this about?

14 **MR. McNULTY:** I think that as specified in FPL's  
15 petition, they have stated a concern of basically nascent  
16 asymmetry of reaction between stakeholders related to  
17 times when there are losses compared to times when there  
18 are gains in the hedging programs. And they have noted a  
19 defection, if you will, of support in times when there are  
20 significant losses, and that has been a concern to the  
21 utilities, and I think is the reason why we sit here  
22 today.

23 **COMMISSIONER ARGENZIANO:** But they -- excuse me,  
24 Mr. Chairman. But they haven't felt the pain from that  
25 yet.

1           **MR. McNULTY:** Well, they haven't felt the pain  
2 from that. They feel that -- I don't mean to put words in  
3 their mouths, they may be able to address this  
4 specifically, but I think they sense a future penalty  
5 could happen as a result of not improving the process in  
6 the way that they feel or the way they have set forth in  
7 their guidelines.

8           **COMMISSIONER ARGENZIANO:** I would like to ask  
9 staff another question that I am concerned with that OPC  
10 raises that FPL in its original petition indicated that  
11 the indirect cost associated with hedging could be quite  
12 substantial. Can you maybe elaborate a little bit more on  
13 that, and then OPC also, on how that effects the consumer.

14           **MR. McNULTY:** OPC is correct in that it was  
15 raised in the VMM petition, Volatility Mitigation  
16 Mechanism petition filed by FPL in January that there  
17 could be indirect transaction costs associated with  
18 hedging and that they could be substantial in nature.

19           As you heard FPL mention today, they could be  
20 either positive or negative, and the type of indirect  
21 transaction costs that were specified in the VMM petition  
22 and then also reviewed in our management audit had to do  
23 with the bid ask spread of swaps, which is the financial  
24 instrument that FPL uses in the main for its financial  
25 hedging program. And so if you look at that bid ask

1 spread, that is a price differential, if you will, that  
2 would exist on the major indices such as the NYMEX and  
3 ICE. And that bid ask spread establishes a range of  
4 prices for a specific index, say natural gas, and its  
5 trading in a particular day, a particular time period.  
6 And so you have a differential that exists there.

7           If you were to measure the midpoint of that  
8 differential of what is happening in the market to what is  
9 actually entered into as a transaction for a hedge by the  
10 utility at that point in time, that differential could be  
11 considered an indirect transaction cost. As I say, it  
12 could be either higher or lower.

13           I should note that FPL recognizes that as an  
14 indirect cost and has done so in the VMM petition, whereas  
15 the other three utilities that are engaged in hedging  
16 programs in Florida do not recognize that as a cost. So  
17 there is some debate as to whether or not that is a true  
18 cost or not. It is somewhat, you know, theoretical.

19           **COMMISSIONER ARGENZIANO:** And just maybe one  
20 more, and forgive me on this one because it may be that I  
21 need more information. But if there are savings realized  
22 because there are ups and downs in hedging, and hopefully  
23 you get it right as many times as possible. If there are  
24 savings realized, do the customers realize those savings  
25 also, and how does this affect ROE?

1                   **MR. McNULTY:** I will address the first question  
2 and then I will defer the second question to Pete Lester  
3 of staff. The first question is how does it effect  
4 customers, directly through the fuel clause. I believe  
5 that was the intent of the question. And to that extent,  
6 if, I guess, I could give an example, in that we had a  
7 series of midcourse corrections this past summer, and in  
8 staff's recommendation we noted that but for hedging  
9 actions of the utilities, the midcourse adjustment which  
10 was, of course, an increase to the fuel factors, would  
11 have been significantly higher had the companies not  
12 hedged. And that was because we found ourselves in an  
13 increasing price market for natural gas and oil. And so  
14 you could see very clearly then that the utilities'  
15 customers because the factor was adjusted based upon costs  
16 that are incurred plus the hedging transactions and the  
17 effect of those hedging transactions, would have lower  
18 fuel factors as a result in that case.

19                   Well, it works the other way, too. A utility's  
20 customers can be paying more in the event that there is a  
21 declining cost market. And then as expected, customers  
22 that are served by utilities that are significantly hedged  
23 in oil and gas would be paying more and it would be  
24 reflected in the factor and through our normal true-up  
25 process.

1                   **COMMISSIONER ARGENZIANO:** And then I think  
2 people that may be listening, and, again, it could be two  
3 people out there listening in, but I want them to have a  
4 good understanding of the pros and cons. And if you could  
5 answer the other question for me.

6                   **MR. LESTER:** On ROE, I think OPC has alleged  
7 that hedging provides more stable cash flows and that that  
8 would lower the risk per the investors for the  
9 stockholders. And that's rather debatable. But to the  
10 extent it is true, it would be an appropriate  
11 consideration, it could affect their overall risk profile  
12 it would be an appropriate consideration in an ROE  
13 determination in a rate case, a base rate proceeding. So  
14 it's not something that directly relates to the fuel  
15 clause.

16                   **COMMISSIONER ARGENZIANO:** Well, in reading OPC's  
17 comments about that, I think they're saying -- and let me  
18 see if I can find it. Okay. And if the Commission were  
19 to approve the proposed guidelines, the effect would be to  
20 lower the utilities' regulatory risk inasmuch as the  
21 utilities are compensated for the level of risk they bear  
22 through an approved rate of return. Any approval by the  
23 Commission should be reflected in the rate of return on  
24 equity that it is commensurately lower. And that's the  
25 point I guess I was trying to get at. And if OPC and FPL

1 would like to give me more of their point of view on that,  
2 I would appreciate it.

3 Mr. McGlothlin.

4 **MR. McGLOTHLIN:** The point we made in the  
5 written comments, and that I mentioned earlier today is  
6 that when a utility points to a particular activity or  
7 regulatory action as having the benefit to the customers  
8 of lowering its cost of capital, that always seems to be  
9 something that never -- the wheels don't quite turn far  
10 enough for the customers to actually receive the benefit  
11 of that. And the same would be true in this instance.

12 I did not intend say that as a part of the  
13 consideration of the guidelines it is incumbent or  
14 necessary for the Commission to lower the rate of return  
15 by X basis points. But I think it is worth noting that  
16 with respect to those benefits that arguably enure to the  
17 customer, we never quite seem to get to that point where  
18 it actually becomes translated into lower rates that the  
19 customer is paying in return for that.

20 If I could follow up on a couple more things  
21 while I've got the floor momentarily. There have been  
22 references to the fact that the 2002 order was a result of  
23 a stipulation, a resolution of dispute, and that is true  
24 and we were a party to it. I would like to make a point,  
25 if it isn't clear enough already, that we do not have a

1 stipulation today. That we have references to a  
2 collaboration to the full vetting of the guidelines.  
3 Well, along the way we have made known our objections to  
4 and our disagreement with the direction that the utilities  
5 were going, and so our appearance here today is not a  
6 surprise to FPL or anybody else.

7           **MR. BUTLER:** Commissioner Argenziano, I think  
8 that in answer to your question, FPL sees that the  
9 existence of hedging in an environment of uncertainty,  
10 which is kind of what we have been characterizing our  
11 current situation and what we hope the guidelines will  
12 address, that certainly will have upward pressure on ROE.  
13 It is, you know, one of those measures of financial risk  
14 that increases investors' expectations of return.

15           You know, FPL has not had its ROE set in the  
16 period during which hedging has been in place. I think it  
17 would be fair to say that whatever increment of  
18 uncertainty exists in that is a result of the hedging and  
19 the uncertainty about how hedging results will be reviewed  
20 is something that is upward are pressure on the ROE.

21           You know, we would agree that the adoption of  
22 the guidelines will help to mitigate that upward pressure.  
23 It will bring greater certainty, it will have a downward  
24 influence on what the ROE is or requirements are.  
25 Ultimately, we go back to what Mr. Lester said. You know,

1 we definitely agree this is a subject that isn't something  
2 that would properly be addressed in isolation, that one  
3 needs to look at all of the factors that affect ROE. That  
4 traditionally happens, it will happen in base rate  
5 proceedings, and that is the appropriate place to have the  
6 full analysis.

7           But, frankly, I think if you were to look today,  
8 say compare 2001 to now, my guess is that even with the  
9 adoption of the guidelines, there would probably be some  
10 perception of a residual increase in FPL's overall risk  
11 because of what hedging has brought into the equation  
12 compared to where we were when we weren't hedging, but the  
13 guidelines would go a long ways toward reducing that risk.

14           Just on the subject you had mentioned earlier of  
15 kind of what are the utilities concerned about, it's true  
16 that we have not had any amounts disallowed. We think  
17 that is because we have been doing a good job with our  
18 hedging programs and certainly intend to continue. But  
19 understand that, you know, the fuel markets are extremely  
20 volatile. There are run-ups and run-downs that are in the  
21 hundreds of millions, even pushing up toward a billion  
22 dollars in a year of variability. And when we take that  
23 out of the equation by hedging so that it doesn't show up  
24 in fuel costs, where it shows up instead is in the gains  
25 and losses that the hedging programs show.

1           And we can up having hundreds and hundreds of  
2 millions of dollars of benefits of gains in periods of  
3 increasing prices. You can have that same measure or that  
4 same magnitude of hedging losses reported in periods where  
5 the prices are running down. And both of those are  
6 expected, intended functions of the hedging program. We  
7 just have had a lot of concern that if we were caught out  
8 in one of those periods where the prices have gone down,  
9 there are hundreds of millions of dollars of reported  
10 losses. We want to be sure it is really clear how the  
11 results of that program is being evaluated for prudence,  
12 because uncertainty over that evaluation when you have got  
13 dollars at that magnitude outstanding is just the sort of  
14 thing that makes investors very wary.

15           **CHAIRMAN CARTER:** You made proceed.

16           **COMMISSIONER ARGENZIANO:** And I understand that.  
17 I guess the hard time I'm having is understanding where  
18 your risk really comes in. Because what you are saying is  
19 if -- let's say you went out and hedged and the costs  
20 dropped and you bought at a higher rate, and that's where  
21 you would kind of have risk if something imprudent was  
22 done. So the risk really comes in if there is something  
23 deemed imprudent, otherwise there is no other risk. And I  
24 don't mean to repeat it again, but I don't see where the  
25 risk is on the utility any more when legislatively most of

1 the risk has been put upon the consumer.

2 I understand -- and that's what I'm trying to  
3 extract from you. I understand what you are saying about  
4 the volatility and at that point that you having risk is  
5 only if you have done something imprudent. And  
6 understanding what the criteria is, I guess, for what is  
7 imprudent and what is not is what you are trying to get  
8 at. But, like I said before, I'm afraid that within a  
9 guideline it's not going to encompass the many, many other  
10 things that could be in there that we couldn't look at to  
11 safeguard the consumer. That's my real concern.

12 But, again, let me see if I can get this out  
13 right. The risk to me is only if it's imprudent. And you  
14 are trying to find more specifics. But I don't see where  
15 the company or the shareholder shares in that risk. I see  
16 only the consumer shares in that risk. So to take away  
17 something that may be more definitive whether there is  
18 prudence or imprudence is concerning to me, because I see  
19 all the risk really going to the consumer and not to the  
20 company.

21 **MR. BUTLER:** Let me try this. I don't know if  
22 this will help, I hope it does. You know, let's take two  
23 years. The first year prices ran up compared to what we  
24 hedged and we ended up with \$500 million of gain. And our  
25 perspective is we don't get a lot of criticism in those

1 years. Now, you've got this substantial gain from the  
2 hedges, everybody is pretty pleased that fuel prices  
3 didn't increase as much as they should, or as they would  
4 have otherwise.

5           The next year, just the mirror image of that,  
6 that we place hedges, fuel prices decline, there is  
7 \$500 million reported of loss. Now, in that year  
8 customers will probably actually pay less than they were  
9 expected to pay because the market has gone down, but they  
10 won't pay as much less as they would have without the  
11 hedges. And so you have this reported \$500 million loss.  
12 Both of those are fully expected outcomes of a hedging  
13 program, because it is about volatility control, trying to  
14 keep the fuel prices closer to level rather than having  
15 them swing rapidly up and down.

16           But in that second year, what we are concerned  
17 about is that is, of course, a very large sum of money.  
18 And the Commission could review that. It could say, you  
19 know what, FPL, if you had not placed these hedges, or if  
20 you had placed them at different points of time, or if you  
21 had used different instruments, or et cetera, et cetera,  
22 that loss didn't have to be \$500 million. Maybe there is  
23 some other mechanism you could have used and it would have  
24 only been \$300 million. So we are not going to allow you  
25 to recover \$200 million of that hedging loss that existed,

1 because looking at it now there were other ways you could  
2 have hedged and you could have had less of a loss in that  
3 year.

4           That would be a very, very large disallowance.  
5 I mean, enormous compared to the sort of scope of what  
6 normally is at stake in prudence reviews. And we would  
7 not know in advance even exactly how we would be defending  
8 our actions, because there wouldn't be any standards or  
9 guidelines of what we should have been doing. And we  
10 would, of course, be saying you can't look at it with  
11 hindsight, et cetera, et cetera. But there is always this  
12 sense that, my gosh, there was something else out there,  
13 maybe you should have done that instead.

14           What we want to do is get everybody  
15 understanding up front the direction that we will be  
16 taking and then looking at the results within the  
17 framework of what everybody agreed ought to have been  
18 done. It won't completely eliminate, it certainly won't  
19 eliminate the prudence review, it won't completely  
20 eliminate the uncertainty of the risk, but it gives us a  
21 better sense that it's within a structure we can live  
22 with. We know how to work within it. We know how to be  
23 sure that we are doing what we need to do so that when  
24 that review comes we can demonstrate to you that we acted  
25 prudently.

1                   **CHAIRMAN CARTER:** I guess what the crux of it  
2 is, and I'm glad that that is really where we are now, the  
3 crux of it is whether or not the hedging, when prices go  
4 up, we have a lower cost of fuel like we did this year.  
5 And consequently it is passed through to the ratepayers  
6 where they are paying less. But what happens in the  
7 inverse? And I think that the fact of the matter remains  
8 that this year was a good year in terms of using hedging  
9 to protect against the spiraling cost of fuel.

10                   And fuel is a pass-through. And we all know it  
11 is a pass-through, it's not like it goes to the company's  
12 bottom line, per se. But I think that the context of it  
13 is, is that if prices go up we look at the company like  
14 you guys are a bunch of geniuses, you did a great thing.  
15 But in the flip side, when they hedge and it goes against  
16 them, then I think that the crux of issue, and I think we  
17 have been on the collateral of the issue, but I think that  
18 the crux of issue is that on a going-forward basis how do  
19 we put some parameters in there to say when we do the  
20 prudence review what is or what isn't.

21                   **COMMISSIONER ARGENZIANO:** And, Mr. Chair, I  
22 understand the crux very well. I understand what it is.  
23 What I'm trying to say is the only risk that the company  
24 is concerned with at this point, and I understand that  
25 risk, is at the point that if they have spent -- it

1 doesn't matter whether they have -- because hedging is a  
2 gamble, so it is all a gamble, and I understand that very  
3 well. Maybe I have been born somewhat of a gambler, and I  
4 understand that. But in looking and trying to articulate  
5 what I'm saying one more time is that the risk here, the  
6 only risk here for the company is if it is deemed  
7 imprudent.

8           And I understand they need to know what  
9 imprudent is, because they are afraid that if they put  
10 billions or millions of dollars at stake it could then be  
11 considered imprudent and that could cripple the company.  
12 But what I'm saying is when you possibly diminish what  
13 could be encompassed by just saying -- how do you cover  
14 some of the things that then we cannot question because if  
15 they met those guidelines, you can't cover that. And what  
16 I need to hear is a little bit more certainty that there  
17 is some kind of an out to say that for me, as a  
18 Commissioner, or OPC, or the company to defend, how do you  
19 encompass a little bit more of what might not be. You  
20 might have met a guideline, but it still might not have  
21 been prudent, and that is where my concern was.

22           **CHAIRMAN CARTER:** Let me go to Commissioner  
23 Edgar and I will come back to you. I said I would come  
24 back to Commissioner McMurrian. I will come back to you.  
25           Commissioner Edgar.

1                   **COMMISSIONER EDGAR:** Thank you, Mr. Chairman.

2                   And I was born very risk averse, so here we are.

3                   So on that point to follow up, because my  
4                   question to staff is if the guidelines were to be approved  
5                   today, would the review by staff be lessened in any way  
6                   than if the guidelines were to not be approved?

7                   **MR. McNULTY:** Commissioner, maybe I can --

8                   **COMMISSIONER EDGAR:** I need it.

9                   **MR. McNULTY:** Maybe I can address that with  
10                  spinning off the example that was started by Mr. Butler of  
11                  FPL. He gave out an example of a year in which you would  
12                  potentially have -- in a declining price market you would  
13                  have \$500 million in hedging losses. And we know that  
14                  FPL, as stated earlier, engages mostly in swaps for their  
15                  hedging transactions. If in the results that we receive  
16                  from the company we see that these \$500 million in losses,  
17                  and we go back and we look at the time period in which  
18                  they engaged in those hedges, and the utility in  
19                  struggling to meet maybe the parameters of its plan, say  
20                  40 to 60 percent is the range of the volume in which they  
21                  want to have hedged, and in an attempt to meet that 40 to  
22                  60 percent at a specific time period, they engaged in a  
23                  hedge without checking counter-party risk and engaged with  
24                  a financial institution that had significant counter-party  
25                  risk. My perception of that is even though they are

1 within the bounds of the plan that was set forth, if they  
2 engaged -- and let's go back one step and say in their  
3 plan they put in specific parameters that says we have a  
4 very diligent program for assessing counter-party risk,  
5 and we do that regularly, okay. And then we see that they  
6 went and they engaged with a counter-party that had  
7 significant financial risk that would be considered too  
8 high, then this Commission would be able to evaluate that  
9 situation, would be able to determine whether or not that  
10 was a prudent action for the company to make.

11 I think that would be an example where the  
12 company is staying within its plan, yet hasn't really  
13 fully complied with other aspects of the plan, so you  
14 could have two things intentioned. So I don't look at  
15 these plans as being rock solid, if you have done one  
16 thing you are then in compliance and prudent. You have to  
17 be in compliance with everything that is expected. It  
18 does raise the level of the importance of our review  
19 process of the plans.

20 **CHAIRMAN CARTER:** I think I wanted to kind of  
21 burrow in a little deeper on that, because I think that is  
22 the crux of the issue that Commissioner Argenziano,  
23 Commissioner Edgar, and I were talking about is that  
24 within the confines of the plan, and even if they do  
25 engage in the swaps, just because they engage in a swap as

1 we look at that we can say, well, conceptually you are  
2 right, you engaged in a swap, that is what you said you  
3 were going to do in the plan, but based upon our financial  
4 analysis of that swap versus another swap versus at  
5 another vendor they could have saved more.

6           That does not restrain us as a body to say,  
7 well, yes, you engaged in swaps like you said you were  
8 going to do, however at the time when you engaged in the  
9 swap there was Company A, Company B, and Company C. You  
10 chose Company C and you chose poorly. We would still have  
11 the authority to do that, is that correct?

12           **MR. McNULTY:** I would say that if you had three  
13 different companies that they could have transacted  
14 business with at that time, that you would want to say --  
15 you would not want to get into the process of  
16 micromanaging that decision. You would want to say, did  
17 they violate some other aspect of the plan that would be a  
18 basic parameter that they should have followed? Did they  
19 fall below a thorough review process, is the example I  
20 gave, of counter-party risk.

21           To get into the question of should they have  
22 picked Company A or B, which both may have been viable,  
23 but one had, you know, in the end result resulted in  
24 better, you know, gains or less losses, higher gains or  
25 less losses, I don't think that that is the kind of review

1 that is contemplated by staff going forward.

2 **CHAIRMAN CARTER:** I'm going to Commissioner  
3 McMurrian, and then I will come back.

4 Commissioner McMurrian.

5 **COMMISSIONER McMURRIAN:** Thank you, Chairman.

6 And let me start off by saying I think this  
7 discussion is great, and I was even thinking to myself  
8 that you might even argue that the regulatory risk that  
9 FPL is talking about would not be so great if we had had  
10 this kind of discussion among ourselves sooner. And I'm  
11 not sure we have had that many opportunities to do that.  
12 But the point about the asymmetric risk, I would agree  
13 that I have seen that. I realize that there hasn't been a  
14 determination of imprudence in the past, but I think that  
15 the asymmetry that was mentioned -- I think we have had  
16 more concern when we have had those periods of declining  
17 rates and then we have had the hedging costs on top of  
18 that, and I think that I'm concerned by that, too.

19 And I find myself thinking that although I think  
20 hedging is a good strategy to try to minimize the  
21 volatility, that I myself when I started seeing that we  
22 have lost, and lost some of those savings that we would  
23 have had just by virtue of what fuel they would have  
24 bought, that I myself sort of questioned that, too.

25 And I think that has been raised by a number of

1 the parties in some of the proceedings, and I think  
2 particularly with the last fuel case there was some  
3 additional risk that came in with how we sort of decided  
4 what period of time would be reviewed. There were those  
5 things that came up, and I think that that sort of started  
6 this deeper look into how it might be better to structure  
7 this thing.

8           So I think the company is trying to address  
9 that. And sort of getting back to the point about the  
10 prudence review and are we reviewing less or not, I noted,  
11 and I was trying to find it and I did finally find it in  
12 here. On Page 16 in the clarification guidelines -- and  
13 this is leading up to a question, Chairman. Under I.C.,  
14 under Roman Numeral I and then the C under that, because I  
15 have sort of struggled with this, you know, is it better  
16 to have the process like we had it before, is it better to  
17 have the plan up front. And I noted in the last, I guess  
18 that is a full sentence at the last part of that, C, where  
19 it talks about that in the staff recommendation on  
20 April 14th that staff believed the more appropriate  
21 approach was for the Commission to approve in advance  
22 company risk management plans that identify ranges and  
23 percentage of volumes to be hedged and the types of  
24 hedging instruments. And then acting within those  
25 guidelines the company can rebalance its hedge positions

1 in response to the changes in market conditions.

2 And I guess when I saw that, then I felt like  
3 that because of the concerns that have been brought up  
4 and, of course, at that time we had a different proposal  
5 before us, that perhaps staff was saying this might be a  
6 better way to go. And then the company went and looked at  
7 that approach and that is part of what they have proposed  
8 here.

9 You know, whether or not it's perfect, I don't  
10 know, but I think that we probably have a lot of  
11 discretion to review the actual hedging transactions when  
12 they come to us. I do think that we will have the plans  
13 and that we will look at whether or not they have been  
14 consistent with the plan, but I think, as Mr. McNulty  
15 suggested, we probably have a little bit more flexibility  
16 to look at anything. If something was imprudent, I think  
17 we still have the ability to say so.

18 But, again, I do think that there is probably  
19 more risk. But I wanted to allow Mr. McNulty or Mr.  
20 Lester a chance to sort of explain what their thinking was  
21 when they wrote that sentence in that recommendation on  
22 April 14th to help us better understand why you put that  
23 proposal out there to begin with.

24 **MR. McNULTY:** We felt like it just provides more  
25 order and clarity to the whole process. They provide a

1 plan, it is going to lay out the types of fuel, the  
2 instruments used, ranges of volumes hedged, and that's  
3 going to just spell out what they are going to be doing.  
4 And then following up on that, we can audit and compare  
5 their actual hedging transactions to market prices and  
6 verify the prudence of those transactions.

7 I think it gives order and clarity, but it  
8 doesn't diminish your ability to review hedging  
9 transactions. It just gives them the assurance that they  
10 are heading in the right direction and lets you know what  
11 is going on, as well.

12 **CHAIRMAN CARTER:** (Inaudible. Microphone off.)

13 **COMMISSIONER McMURRIAN:** I had one other thought  
14 that I had wanted to say earlier, and it was in relation  
15 to some of the discussion we had about that in the times  
16 of rising costs it seems like that it has been beneficial,  
17 and I think you said this, Chairman, in the times of the  
18 lower costs it doesn't seem so. And I guess -- I know  
19 that the question is really before us, as Commissioner  
20 Edgar mentioned, the question isn't really before us about  
21 hedging or no hedging, although I think we are having  
22 somewhat of that kind of discussion, as well.

23 And I guess maybe it goes back a little bit to  
24 how you think the prices will be reflected in the coming  
25 years. And I think I have said before, I think that we

1 are probably going to see a period of increasing prices  
2 for natural gas in particular. I'm not as familiar with  
3 oil, although I think that they have fairly consistently  
4 gone -- well, they have been volatile. And I think that  
5 was the reason that the Commission decided years ago to  
6 put this in place. And I think that it has been  
7 beneficial.

8           Again, we have had those periods where it maybe  
9 didn't look as beneficial. But I guess because I see that  
10 we are probably -- at least in my opinion, I think that we  
11 will probably have more periods of increasing prices, that  
12 I think that hedging will provide us some benefits in the  
13 same way we have seen in this last cycle. So I guess I  
14 just wanted to share that, as well, that I think that all  
15 in all that it is going to benefit the consumer and sort  
16 of mitigate some of that volatility we have seen. Thank  
17 you.

18           **CHAIRMAN CARTER:** Thank you. I'm going to go to  
19 Commissioner Argenziano, and then I will come back to  
20 Commissioner Skop.

21           Commissioner Argenziano.

22           **COMMISSIONER ARGENZIANO:** Thank you.

23           For staff, again. You mentioned that -- the  
24 order on clarity, and I understand that, and I will keep  
25 saying that. And it is not about hedging, this is about

1 the guidelines. And you said, I think, they spell out  
2 what they are doing to verify the prudence of those  
3 transactions, I think were your words. Well, probably the  
4 answer that I would like from you is how are you then not  
5 focusing -- and I will use this for some kind of  
6 comparison -- when you have these guidelines, how are you  
7 not focusing on the forest rather than the trees?

8 I mean, you are just focusing on the bigger and  
9 not what it encompasses, all the little things that could  
10 encompass prudence. And how do you -- or, I guess I'm  
11 going to ask you this way. You think that the guidelines  
12 would include the trees. My concern is that once you say,  
13 well, you have met the guidelines, you can't go back then.  
14 You are not going to be able to go back. And I understand  
15 the certainty part of that, but my focus again is there is  
16 a lot of little things that have to take place. And once  
17 you have the guidelines set like this, you are looking at  
18 the forest and not those little trees, which should be and  
19 have been included in the prudence determination. So to  
20 me for you to say that you are not diminishing that, I  
21 think you are by not including the trees.

22 **MR. LESTER:** Well, we'll be doing audits. We  
23 are doing one now, and that is going to be --

24 **COMMISSIONER ARGENZIANO:** Well, that is true.  
25 But your audits will only go to the guidelines, because

1 that is what we are saying here. If you have met the  
2 guidelines, then that is it, that is pretty much it.  
3 Instead of what you have now, you have met the guidelines  
4 and included some of those trees in there, then your audit  
5 would make a big difference.

6           So, again, going back to the guideline, to me it  
7 does diminish a prudence that we have currently. And  
8 understanding the need for the company's certainty, and we  
9 need to get there, but I don't think that this is the  
10 right way by lessening prudence, which is the only thing  
11 we have and the only risk the company does have on the  
12 grand scale.

13           I mean, I'm not willing to give up that, I  
14 guess, greater prudence determination right now without  
15 finding a better way of giving the company some certainty  
16 with the things they need, because this is the only place  
17 that they have risk. And I understand that risk, and I  
18 understand what it could do, but I just don't feel that we  
19 have gotten to that point with these guidelines that will  
20 take those trees into account somehow. And there needs to  
21 be something in there that says if I find a tree, you  
22 know, so what if you met the guidelines. But the tree  
23 here is going to make a big difference to the consumer,  
24 and I'm not willing to do that, because I do think it  
25 diminishes.

1           And that's probably what I'm asking staff,  
2 because you have quite readily said that you didn't feel  
3 it diminishes it. But now given the fact -- I'm just  
4 saying given the fact that maybe those little trees, I  
5 don't know how else to say it, could pop up, even though  
6 you have an audit, isn't it true then that pretty much if  
7 you met the guidelines that is where it is going to be.

8           **MR. LESTER:** Let me give you an example of a  
9 tree from the way I see it.

10           **COMMISSIONER ARGENZIANO:** Okay.

11           **MR. LESTER:** Okay. Today there is a futures  
12 price for natural gas for December 2009, and let's just  
13 say the market price is \$10. I don't know exactly, but  
14 let's say that. Okay. We are going to audit the  
15 transactions. If we find out FPL today locked in a \$12  
16 price through a swap, then we are going to look at that  
17 because there is a discrepancy there. That's a tree we are  
18 going to look at, as well as looking at the big picture of  
19 all the transactions, of their hedging volume, of their  
20 counter-party credit risk in their analysis process, and  
21 things like that which are going to be spelled out in the  
22 plan.

23           So I see that as being more like a preview of  
24 what you are going to do in a prudence review, and then  
25 following up and doing it. But I think it gives you --

1 you have the discretion, you retain the discretion to make  
2 the prudent cost determination.

3 I guess just to simplify, I see the trees in  
4 your example as being the individual hedging transactions.  
5 We are not going to ignore those. We would continue to do  
6 an audit regarding that, and then do discovery on the full  
7 policy and direction of their hedging program.

8 **COMMISSIONER ARGENZIANO:** Mr. Chairman, then I  
9 don't understand the purpose of guidelines if you could  
10 still get to the trees. I think I would like to have OPC  
11 weigh in on that. What is your feeling, OPC's feeling, I  
12 guess on -- when you say diminish our ability for  
13 prudence, for full prudence, could you specify? And, I  
14 mean, now is your chance. And I need to hear from the  
15 company, too, again, on the certainty. Because there has  
16 got to be a way to get them some certainty that they do  
17 need.

18 **MR. McGLOTHLIN:** Commissioner, I think the  
19 question you have posed to the company and the staff is  
20 this: If we give the companies what they are asking, can  
21 we retain our full ability to protect the ratepayers? And  
22 I submit to you the answer is no. I submit to you that  
23 the certainty to which the utility is entitled is the  
24 certainty that you will apply to the prudence test the  
25 facts of the law in a responsible manner and that you will

1 do so with full knowledge that the balancing test you are  
2 called upon to implement which balances the interests of  
3 the company with the interests of the customer.

4           Now, in rising markets and falling markets, the  
5 prudence test and with big numbers and small, the prudence  
6 test remains the same. The prudence test is under the  
7 circumstances which were known or should have been known  
8 to the company, did they act prudently and responsibly,  
9 and were the costs reasonable? And that doesn't change.  
10 To what the companies call reduction in regulatory risk, I  
11 would call a shifting of risk. Because once you go away  
12 from that format and place greater emphasis on up front  
13 approval of a set of guidelines, you can be sure that down  
14 the road the company's primary defense is going to be but  
15 we met the guidelines. And so I think there is this  
16 continuum. And within that continuum if you move toward a  
17 regulatory policy that is utility favoring, at the same  
18 time you move to a policy that gives up the ability to  
19 protect the ratepayers.

20           **CHAIRMAN CARTER:** Mr. Reilly (sic), I didn't  
21 follow you. Because I didn't see where you specifically  
22 delineated what protections for the ratepayers are there  
23 now that will be taken away. That's what I was listening  
24 for. So could you help us out on that? Because it seems  
25 that you are saying to approve this then we are taking

1 away all kind of protections for the ratepayers, but I  
2 didn't hear that in what you had to say. So could you --

3 **MR. McGLOTHLIN:** Well, the thrust of FPL's  
4 request is to develop the guidelines that would be  
5 presented at the outset, and then to limit the ability to  
6 review those to one of many things that go under the  
7 November hearings. And so from the standpoint of pushing  
8 things to the front of the process rather than to the  
9 rear, and to the standpoint of limiting the time and  
10 opportunity for review, those are both very limiting  
11 mechanisms for protecting ratepayers.

12 **CHAIRMAN CARTER:** When you say limitations,  
13 though, what I'm saying is that you have heard what staff  
14 has said in terms of our ability to do the audit as well  
15 as the transactions themselves. I'm trying to find what  
16 protections for the ratepayers that has been lost in this  
17 process, particularly in light of hedging as it has  
18 existed before.

19 **MR. McGLOTHLIN:** Part of it is the up-front  
20 nature of it, where in approving guidelines you by  
21 implication limit ones review. And part of it is the  
22 timing of review, and the timing that is -- the review  
23 that is performed in conjunction with other things that  
24 are on your plate at the time.

25 **MR. BUTLER:** Mr. Chairman, may I respond?

1           **CHAIRMAN CARTER:** You're recognized, Mr. Butler.

2           **MR. BUTLER:** Thank you.

3           Two or three things to try to make it quick.

4           First of all, just so everybody knows, we have been filing  
5           hedging plans since the inception of the hedging process  
6           with the 2002 hedging resolution. What's different, what  
7           we are proposing here, one, is I think our plans will be  
8           more specific, more detailed, give more guidance. And,  
9           two, the review mechanism, review and approval mechanism  
10          that we have been talking about here, I continue to fail  
11          to understand how anybody could suggest this process will  
12          be less rigorous or involve less review than what we have  
13          been having. Because there will be, first of all, the  
14          review and approval of the plans, and the Commission is  
15          free to make changes to the plans that we submit.

16                 If you don't think that they are prescriptive  
17          enough, if you think they are too prescriptive, if you  
18          don't think they cover the right subjects, those are  
19          things that, you know, could be brought back to us  
20          typically in the form of staff review, but obviously it  
21          could be at the hearing itself where there is a decision  
22          that the plan needs to be different than as was stated.  
23          So there is a very explicit opportunity for input up front  
24          where I think everybody would agree it does the most good.

25                 And then there is the subsequent review that

1 will occur. We will be filing hedging results every  
2 month, and then we will be doing a report that wraps up  
3 the period from January through July of all of the results  
4 comparing that to what we said we were going to be doing.  
5 There will be full opportunity to review that. You don't  
6 come to hearing on that until the following year's fuel  
7 hearing, and everybody will have had an opportunity to,  
8 one, see whether we did what we said we were going to do;  
9 two, within the range of implementation discretion we had  
10 whether we made good choices or bad choices. And if there  
11 is anything that people feel needs to be brought to the  
12 Commission as a matter of imprudence, they will have had  
13 most of a year to review that information and do so.

14           So it seems to me that that compared to what we  
15 are doing now, which is there is a filing of these risk  
16 management plans, but not really a thorough vetting of  
17 them up front, and then just this one shot, get an annual  
18 hedging report, and look at that and come back to a  
19 subsequent fuel hearing to pass on the prudence of it, it  
20 seems to me like we are proposing something that involves  
21 actually quite a bit more process of review and approval.

22           And why we are willing to propose that, you  
23 know, sort of somewhat more involved regulatory mechanism  
24 is because it does structure it in a way that just helps  
25 us to kind of see it move forward and understand where we

1 ought to be in terms of implementing within it. I can't  
2 see how that is anything but a win for everyone.

3 **CHAIRMAN CARTER:** Thank you. You have been most  
4 patient.

5 Commissioner Skop, you're recognized.

6 **COMMISSIONER SKOP:** Thank you, Mr. Chair.

7 I just have listened to the discussion and kind  
8 of wanted to chime in and just make a few quick points. I  
9 guess with respect to the issue before us, I guess looking  
10 at the historical context, it seems to me that the VMM and  
11 the ensuing discussion all seems to be somewhat of an  
12 industry response to the deferral of the prudency  
13 determination of hedging cost that occurred last November.  
14 And although I was never in favor of the VMM and they have  
15 withdrawn it to the extent that FPL is heavily dependent  
16 on natural gas-fired generation for its generation mix,  
17 and at least for me, the VMM did nothing to protect  
18 consumers from fuel price volatility risk. And to me that  
19 is a big concern given the fluctuation in natural gas  
20 prices that we have seen in the course of the year. Gas  
21 had gone from about \$7 per MMBtu all the way up to near 13  
22 and now it is back. I think the last time I checked it's  
23 7, so that is wild volatility swings.

24 To briefly kind of summarize, I guess, how I  
25 look at it is at least for utilities who are heavily

1 dependent upon natural gas, I feel that hedging is  
2 necessary to mitigate that fuel price volatility risk and  
3 to protect consumers from that. I know there is different  
4 methodologies, but looking at it in terms of the VMM,  
5 that's analogous in some regards to what we did with  
6 midcourse correction. We are just passing the total costs  
7 through and we are taking costs as we find them in the  
8 market. We are doing nothing to constrain those costs and  
9 mitigate that volatility.

10 To briefly touch upon a point that Commissioner  
11 McMurrin raised about asymmetric risk, I tend to agree.  
12 Everyone loves hedging gains. When we see the big gains  
13 of years past, everyone is happy. It's just when big  
14 losses come before us, it tends to raise eyebrows. So I  
15 think that was worthy of touching on.

16 To touch upon a point that Commissioner  
17 Argenziano touched upon in terms of what we are being  
18 asked to approve in the risk mitigation efforts that the  
19 utilities may be trying to get out there, I know there are  
20 different arguments. At least to me we are being asked to  
21 approve guidelines which I tend to view as overarching  
22 principles. Then beyond that, each IOU would be required  
23 to submit an individual plan, which I guess based on last  
24 November was confidential, and it articulates the  
25 company-specific strategies for how they choose, you know,

1 what percentage of hedges, and options, and collars, and  
2 swaps and whatever they intend to do and how they intend  
3 to implement that.

4           So I think that there would be significant  
5 discretion for staff to review those type of plans and  
6 make some appropriate determinations of the reasonableness  
7 on a forward-going basis. And then the execution of that  
8 plan, I think that basically the companies, the IOUs would  
9 be allowed to exercise management discretion within the  
10 range of the guidelines in the plan itself.

11           So I do see some of the points that Commissioner  
12 Argenziano raised about topical in terms of prudence. I  
13 do tend to think that there is a prudence review through  
14 the entire course, and I think that some of the guidelines  
15 may provide, you know, at least some direction from the  
16 Commission to the IOUs of what we expect so that things  
17 like November don't reoccur on a forward-going basis.

18           Just two more quick comments on I.C. of the  
19 proposed hedging order guidelines. I guess Commissioner  
20 McMurrian raised the point that the staff comment, and I  
21 think what that spawned from is that, if my memory serves  
22 me correctly, that as an alternate approach to the VMM, I  
23 think back in January FPL proposed a simplified type of  
24 prescriptive hedging program or approach, and I think  
25 staff thought that that was unduly prescriptive. Again, I

1 tend to kind of thought that I would be willing to give  
2 something like that a try to see if it worked, but I think  
3 staff's concern on I.A. is that it is not really  
4 appropriate for the Commission to be prescriptive and  
5 approve prescriptive plans. They should leave that  
6 discretion to the company so that we have that prudence  
7 determination on a forward-going basis.

8           So, again, in terms of passive hedging versus  
9 hedging guidelines, I think this is staff's attempt to say  
10 that the company is responsible for hedging by submitting  
11 their individual plans as they deem fit to do so subject  
12 to our review and on-going prudence determinations.

13           And then, finally, just two quick questions and  
14 I will be done. With respect to a point that was raised  
15 by Mr. McNulty on counter-party risk, and on Page 42 of  
16 the report, and most of it is confidential, it lists the  
17 counter-party relationships. And just two quick questions  
18 to FPL. In terms of mitigating exposure to counter-party  
19 risk in light of the current financial situation industry,  
20 what steps is FPL actively taking to mitigate  
21 counter-party risk?

22           **MR. FOREST:** Commissioner, again, my name is Sam  
23 Forest. I'm Vice-President of Energy Marketing and  
24 Trading for Florida Power and Light. My group, among  
25 other things, is primarily responsible for the hedging

1 program for FPL.

2 To your question, we have a very active credit  
3 management program. It is a daily monitoring process.  
4 Sometimes inter-day, as we have been recently. We have a  
5 very consistent approach to how we manage those risks. We  
6 have several counter-parties, probably upwards of 20, I  
7 would say, that we transact financially with on these  
8 over-the-counter derivatives. We actively manage. As we  
9 see somebody reaching financial difficulty, we would take  
10 definitive steps to slow down the trading process. If we  
11 saw further decay, we would stop trading with that  
12 counter-party altogether.

13 **COMMISSIONER SKOP:** And, secondly, on Page 32 it  
14 identifies FPL's goal. And, again, the number is  
15 confidential, so I'm not going to mention it. But it  
16 mentions the goal for the percent of hedging that FPL was  
17 going to do in 2008. Does it expect in 2009 to have a  
18 similar percentage?

19 **MR. FOREST:** Unless something changes, I would  
20 suggest we probably would be in the same range.

21 **COMMISSIONER SKOP:** Okay. And hopefully I did  
22 not repeat myself, but I think I left off one point. In  
23 terms of fuel price volatility, I think that the current  
24 state of the airline industry is also a striking example  
25 of what happens when fuel price volatility is not properly

1 mitigated. And to that point, briefly, Southwest employs  
2 hedging, and it is currently able to keep its fares very  
3 low, resulting in a competitive advantage where other  
4 carriers are not, and they are forced to pass increased  
5 costs along to consumers. And I think that may be an  
6 alternate way of looking at it.

7           But if you are heavily dependent on fuel, you  
8 are very susceptible to those volatility increases, and  
9 ultimately as fuel is a pass-through cost, as Chairman  
10 Carter has duly noted, you know, we have to pay for it.  
11 So if you could mitigate to some extent that volatility  
12 risk, that hopefully in the aggregate over the long-term,  
13 not necessarily in a myopic year-to-year basis, but in the  
14 long-term hopefully they will even out and result in  
15 mitigating that volatility. Thank you.

16           **CHAIRMAN CARTER:** Thank you, Commissioner.  
17 Commissioner Edgar.

18           **COMMISSIONER EDGAR:** Thank you, Mr. Chairman.

19           I think we may be at the point where, once  
20 again, after lots of discussion we are kind of all saying  
21 the same thing. With one of Mr. McGlothlin's -- I hope I  
22 attribute this correctly -- statements that I believe he  
23 made earlier, which was something along the lines of the  
24 certainty is that the prudency review will be applied, and  
25 that's the way I see it, that there is certainty, but the

1 certainty is that the audits will be done and the prudence  
2 review will be done, and that this Commission will look at  
3 the information in the time frame that is appropriate  
4 under our procedures.

5           So, again, I think we are kind of all saying the  
6 same thing. When I looked at the guidelines, I did not  
7 see it, I did not read it, I not think of it as a  
8 diminishment of our prudency review at all, or as putting  
9 something, you know, out of bounds for our staff to review  
10 through the audit and other processes that we have. And  
11 so I guess I come back, once again -- let me go back to  
12 one other point. I have had concerns in the past on some  
13 other issues that sometimes we may be being a little  
14 overly prescriptive on the front end and that that could  
15 limit our ability to look at some things later in the  
16 process. That has concerned me on some other items in  
17 some other dockets that we have, and it would still  
18 concern me as those sorts of discussions come before us.

19           I didn't see these guidelines in that way. And  
20 some of the answers and discussion that we have had just  
21 for me have not been clarifying on that point, but have  
22 raised more questions than answers. So I guess I want to  
23 bring it back to that same just sort of the essence of  
24 what I see in my mind, which is would we be, if we adopt  
25 guidelines, which I think of as guidelines, then would we

1 be limiting our review from what we would do if we did not  
2 have the guidelines. And then with just the additional  
3 thought of when I looked at it I saw it as perhaps a  
4 clarification of the process on the front end, but I did  
5 not see that as a diminishment. But from the answers that  
6 I am getting, it is just not clarifying that for me. So  
7 let me put that to staff. Even though I know we have had  
8 the same question asked before, let me put that to staff,  
9 and then, if I could to, Mr. McGlothlin and to the  
10 utility.

11 Thank you, Mr. Chairman.

12 **MR. McNULTY:** Yes, Commissioner. I don't think  
13 that it is a significant diminishment of our ability to  
14 review the prudence of the utilities' hedging actions. As  
15 part of this, these guidelines, you'll note that we are  
16 going to have an additional month in which to be able to  
17 review the hedging plans. We have shifted the time frame  
18 in which the hedging plans will be filed with the  
19 Commission from the projection filing in September to one  
20 month prior to the actual/estimated filings in August.

21 **COMMISSIONER EDGAR:** And I apologize for  
22 interrupting, but I may forget my question. And I saw  
23 that, too, again, some clarification of time frame. And  
24 as you said, maybe adding a month. But what you said, I  
25 think, to my question of is there a diminishment if indeed

1 the guidelines were to be approved, you said not a  
2 significant diminishment. Well, to me not a significant  
3 diminishment is a diminishment, so could you speak to that  
4 more narrow point?

5 **MR. McNULTY:** Well, you know, I mean, one of the  
6 items that is listed in Section IV of the guidelines is  
7 that the utilities are not expected to apply market timing  
8 and they are not expected to outguess the market and so  
9 forth. That gives a clear weight to, in my mind, to  
10 saying that the companies are encouraged by this  
11 Commission to develop a hedging program that does not do  
12 that. And so in the sense that if this Commission were  
13 ever to say, well, you know, in a circumstance where they  
14 could have taken advantage of, you know, greater gains and  
15 so forth, they didn't do so because they had as a formula  
16 a sort of structured approach to hedging, a dollar cost to  
17 averaging approach, if you will, to hedging, it puts, I  
18 think, a little bit of restraint on this Commission to  
19 challenge that notion.

20 So that is why I say I don't think it is  
21 substantial, but I think it does by giving this  
22 indication, this clear indication within the guidelines,  
23 unless they deviate from that guideline and specify it  
24 within their plans, it does, I think, limit somewhat what  
25 this Commission could reasonably challenge as being

1 imprudent behavior.

2           **COMMISSIONER EDGAR:** And I guess on that  
3 point -- and I appreciate your thoughtful answer in  
4 helping us work our way through this for the past two or  
5 so hours. But on that point I think I may very  
6 respectfully disagree. I don't see from what I read and  
7 the discussion that we have had, I don't see it as a  
8 limitation. If, indeed, it is, that would be important,  
9 and I guess maybe I would look to Legal a little more on  
10 that. I don't see it as a diminishment or a restraint.  
11 And, again, I say that with all respect. Just a  
12 disagreement perhaps on interpretation on that point.

13           Mr. Cooke, could you --

14           **MR. COOKE:** I may need to ask Ms. Bennett to  
15 help me out on this, but my understanding is there are  
16 plans filed currently under our approach to hedging every  
17 year. I don't believe we approve them, per se. That to  
18 me is probably the difference that is happening here.

19           I think if a detailed plan were to be filed with  
20 us, we reviewed it, approved it, I think there would be  
21 some diminishment of what we can do down the road. Some  
22 diminishment in the sense that we are saying that this  
23 structure, the volume of hedging that occurs, et cetera,  
24 is appropriate, and it would tend to shift some burden to  
25 us later on to decide that if they followed that approach

1 that they were being imprudent. I think a lot depends  
2 upon how detailed the plans are.

3 I agree with everything that Mr. McNulty said  
4 earlier, that you would look within those outlines as to  
5 how they were applied, the various types of audit issues,  
6 and you would be able to have a lot of discretion to  
7 decide whether they were prudently implemented. But I  
8 think that is the main difference to me. I don't believe  
9 we current approve the plans in advance.

10 **COMMISSIONER EDGAR:** And I guess that comes back  
11 to the point that Commissioner McMurrin raised with the  
12 ten-year site plan as an example. You know, a plan is a  
13 plan; a guideline is a guideline. And maybe it's how you  
14 define those, but when you said a shift of burden, I mean,  
15 I see our burden as -- which is not much of a burden, but  
16 of prudence review not being a shifting.

17 **MR. COOKE:** That is a bad term to use, because  
18 the company always has the burden of proving prudence.  
19 But when we take an action that sends a message by looking  
20 at these plans and approving these plans, I think it hems  
21 us in a little bit. I'm not saying it is a significant  
22 diminishment, but I think there is some diminishment  
23 beyond what currently occurs.

24 **CHAIRMAN CARTER:** Is it, or did I hear this  
25 wrong, is that it's better for us not to have a plan and

1 then to determine prudence than to present the plan, we  
2 approve the plan, then go for a prudence determination?  
3 Because that's what it sounds like you are saying is that  
4 we don't approve the plans now and everything is  
5 hunky-dory. But if we approve the plans, then we have  
6 less -- a diminishment of our authority for prudence.

7 **MR. COOKE:** It may be just a question of timing,  
8 also. In this case we are being asked to approve these  
9 plans ahead of time. Ultimately we have to look at those  
10 plans and were they prudent to begin with. So it may just  
11 really be a question of timing. We still have to look at  
12 them and we have full discretion to look at them, and I  
13 think that's a point that Mr. Butler and FPL have been  
14 making. We will full discretion to look at those plans  
15 and decide what to do with them.

16 **CHAIRMAN CARTER:** Commissioner Argenziano.

17 **COMMISSIONER ARGENZIANO:** Well, then are we  
18 doing things backwards? Shouldn't we have plans in front  
19 of us first to determine whether they can encompass the  
20 things that would concern me or others? And if I'm  
21 hearing staff right, saying that there is restraint to  
22 challenge and that was some of my points before, because  
23 once you have met the guidelines it is going to be pretty  
24 hard to challenge afterwards. And then hearing counsel  
25 say there is a diminishment, couldn't it be done the other

1 way around? Is there any restraint or any prohibition  
2 from us look at guidelines first to determine whether they  
3 can seriously encompass some of the company's real  
4 concerns about certainty and also take care of the  
5 problems that I may have of any diminishment to the  
6 consumer, which the risk is all on now anyway? Is there  
7 any problem with looking at plans ahead of time?

8 **MR. HINTON:** Commissioner, I think that's the  
9 intent. Right now we are looking at the guidelines that  
10 would require them to file these plans.

11 **COMMISSIONER ARGENZIANO:** Right now we are  
12 saying we would approve guidelines to come later. I think  
13 we are doing it backwards. Some of my real questions are  
14 can the guidelines encompass some of the concerns I have,  
15 as well as OPC, and maybe some consumers out there. And  
16 also incorporate some of the concerns that are real  
17 concerns of the company who need some certainty. So I  
18 think we are doing it backwards. Because at this point I  
19 have too many concerns, and hearing the words restraint to  
20 challenge and hearing the words diminishment are not going  
21 to be a good vote for me today as far as the company would  
22 be concerned, because I'm not willing to do that.

23 **MR. HINTON:** Commissioner, could I try to  
24 clarify my understanding of some of the words that he  
25 used.

1                   **COMMISSIONER ARGENZIANO:** I appreciate that, and  
2 I don't mind if you do, but I'm just going to tell you  
3 that it doesn't negate the fact that those words have  
4 already been said. And in lieu of what I have been -- not  
5 in lieu, in view of what I have been saying about my  
6 concerns for both parts, for the company and the consumer,  
7 but, please, go on.

8                   **MR. HINTON:** Well, Commissioner, I think it is,  
9 as Mr. Cooke has stated, a matter of timing. We are  
10 removing some of the review from the back to the front.  
11 And to draw upon your example of the forest for the trees,  
12 there are a number of different forests out there,  
13 different ways of approaching hedging, and what we are  
14 doing up front is saying, okay, we are going to be in this  
15 forest. And then at the tail end we are going to go in  
16 and still make sure that they were operating correctly  
17 within the forest. But up front we are all getting on the  
18 same page, that's the forest we are going to be working  
19 in. Whereas there is a number of different forests that  
20 we could be.

21                   So as far as restraint to challenge, up front we  
22 are saying we are all agreeing this is our forest, so we  
23 are not going to challenge on the back end that we're in  
24 the right forest. We will look at the trees, but that is  
25 kind of the restraint to challenge right there that we

1 agreed up front which forest.

2           **COMMISSIONER ARGENZIANO:** That's my point. I'm  
3 very uncomfortable with agreeing up front when there could  
4 be a tree that pops up later and then it is too hard and  
5 the restraint of challenge then comes in. So I look at  
6 that as a diminishment of my ability to look into it  
7 further. And that's why I'm asking, can this be turned  
8 around? The company and the staff, can we do it the other  
9 way around? Can we start workshopping and looking at real  
10 guidelines that maybe will make me feel more comfortable.  
11 I mean, you know, it's up the Chairman. I don't know what  
12 our rules are, and --

13           **CHAIRMAN CARTER:** Let's do this. I'm always at  
14 a disadvantage when I try to guess on timing, but the  
15 court reporter has been going for over two hours now, and  
16 I think it's time for us to give her a break. Don't  
17 forget your train of thought, and we will come back.  
18 Let's give the court reporter a break. I am looking at  
19 the clock to my right today, and we will come back at  
20 twenty of. We're on recess.

21           (Recess.)

22           **CHAIRMAN CARTER:** We are back on the record.  
23 And when we left we were in discussion. I think --  
24 Commissioner Argenziano, had you finished your thought?

25           **COMMISSIONER ARGENZIANO:** The only other thing I

1 wanted to ask OPC was given the fact that the Commission  
2 would have the ability to change the plans on these  
3 up-front plans, does that alleviate some of the concerns  
4 that OPC would have?

5 **MR. McGLOTHLIN:** No, Commissioner. I continue  
6 to think that while this package was described as a  
7 request for clarification, it's clear to us and should be  
8 clear to you that the intent of the company is to obtain  
9 in the form of these plans an up-front approval, and that  
10 if they didn't see some comfort and protection against  
11 subsequent challenge, they would not view this as risk  
12 reduction. That's our whole point.

13 **CHAIRMAN CARTER:** Commissioner Edgar.

14 **COMMISSIONER EDGAR:** Could I ask staff to maybe  
15 briefly go over the steps of the process again. My  
16 reading of it was that over the set time frame that the  
17 utilities would file a plan, a plan would come before the  
18 Commission, that there would be review, discussion. That  
19 then obviously the plan would be implemented. However,  
20 that it would have room for variation and adjustment as  
21 any, in my mind, plan does. And that towards the end of  
22 the process then there would be a prudency review, and  
23 that any variation from the plan would be part of that  
24 prudency review.

25 I guess I was getting confused, again, about the

1 steps, and maybe some of it's definitional with plan and  
2 guideline and process and review. But if you could just  
3 walk me through those steps, please. Somebody, anybody.

4 **MR. McNULTY:** Yes, Commissioner, I would like to  
5 address that. I would say, first of all, you have to look  
6 at the guidelines themselves. The guidelines are  
7 basically saying -- in its barest bones it's basically  
8 saying that you will, as a Commission, review the hedging  
9 plans that are filed by the company. And, by the way, you  
10 are going to have more time in which to review them. You  
11 are going to have an extra month.

12 I think that implies that the staff is going to  
13 do a heightened level of review. And I can commit to you  
14 that we will do that. We will review those plans with  
15 great scrutiny because of the import that these plans  
16 have. And this is an improvement in the process. You  
17 have a process in place today, and you have a process in  
18 place tomorrow with these plans that will involve a  
19 greater level of in-depth understanding of what the  
20 companies' intent is in the coming period. The companies  
21 have already indicated that they intend to provide a more  
22 in-depth plan, and in the process we will have an  
23 opportunity to bring that to you. So there will be  
24 greater clarity and understanding up front.

25 We will receive those in early August, and it

1 will be a matter for determination at the November fuel  
2 hearing. After the fuel hearing has concluded, those  
3 plans go into effect the following January and guide the  
4 company's actions for the next twelve months.

5           Subsequent to that taking place, we will receive  
6 hedging reports. We will receive -- in the month of April  
7 we will receive a final hedging report for the last five  
8 months of the preceding calendar year. Then in August of  
9 that same year, we will receive actual results for January  
10 through July of that current year. So we will have, in  
11 essence, almost like a fiscal year period in which to  
12 review how the company has performed.

13           We will apply those results against what has  
14 already been approved by this Commission as the plan  
15 that's specific to that utility. Again, if in the process  
16 of reviewing that plan we think it is too prescriptive, or  
17 we don't like certain parameters and elements of the plan,  
18 it's at this Commission's discretion to challenge those  
19 and to make changes where they see changes need to be  
20 made.

21           **COMMISSIONER EDGAR:** That was helpful to me.  
22 Thank you very much. And I guess that kind of brings us  
23 back full circle to where I was in my thinking a little  
24 earlier, which was along the lines of the guidelines  
25 before us being -- setting out some clarity of process and

1 timing, which in my mind I see as different than what I  
2 think of certainty. So I will just throw that out for  
3 further discussion.

4 Thank you, Mr. Chairman.

5 **CHAIRMAN CARTER:** Commissioner Argenziano.

6 **COMMISSIONER ARGENZIANO:** And can I ask OPC, in  
7 hearing staff's understanding of how the process is going,  
8 can you tell me your opinion on that and how that doesn't  
9 satisfy the concerns that you have. If we can go in and  
10 scrutinize and things are more up front from the company  
11 as to how they are going to proceed, how that is negative,  
12 or what you see negative about that, or if you can give me  
13 your opinion. And the positives to that, too. Because  
14 there are, if you are getting more scrutiny up front, as  
15 far as -- or more understanding of what they are going to  
16 do. So if you can maybe speak to staff's last comments.

17 **MR. McGLOTHLIN:** The answer is in two parts. As  
18 I indicated at the outset of my remarks, even though FPL  
19 has withdrawn its VMM petition, and we have never disputed  
20 its right to do that, and I wasn't trying to confuse the  
21 dialogue by referring to it. What lingers after the  
22 withdrawal is, in our mind, some pretty convincing  
23 indications that hedging, first, is costly to customers;  
24 and, secondly, is of dubious value with respect to the  
25 stated objective, and so that colors everything we have to

1 say about it.

2           With respect to these proposed guidelines,  
3 putting aside that discomfort to begin with, the process  
4 that is described in the petition and that Mr. McNulty has  
5 described today has a well-delineated procedure, but it  
6 doesn't get away from the fact that the intent of the  
7 companies, of FP&L company is to obtain from you some  
8 assurance up front that if they adhere to what has been  
9 put in front of you at the outset of the process they will  
10 be protected from subsequent challenge.

11           And the difficulty in that, even though one  
12 could argue that more thought is given up front, is that  
13 you can't anticipate every circumstance in approving up  
14 front a plan that the company says it's going to be its  
15 blueprint for subsequent activities.

16           And so there simply remains in our mind a  
17 shifting of risk from the company to the customer at any  
18 time the company says to you, oh, it's important to us  
19 that this has to be accelerated and expedited and the  
20 approval has to be up front as opposed to later. When, in  
21 fact, that departs from the more typical scenario in  
22 which, as we discussed earlier, the Commission reviews  
23 after the fact the activities and transactions and applies  
24 to it the standard of the prudence review which is not  
25 prejudicial to the company and which protects the

1 customers.

2 **CHAIRMAN CARTER:** You're recognized.

3 **COMMISSIONER ARGENZIANO:** I'm not so sure that  
4 their only intent or their intent is to do as you  
5 described. It could be for certainty that they need also,  
6 and I understand that. But I think what I heard you first  
7 say was that you really didn't want hedging and didn't  
8 think it was a benefit to the consumer. But I don't know,  
9 I mean, and that's a discussion probably for another time,  
10 but obviously to me there are benefits to hedging also,  
11 just as there were recently with the fuel coming in lower  
12 than it actually would have been for the consumer. So I  
13 see benefits there.

14 And I guess maybe trying to hone in, again, is  
15 that if we have more certainty with specifics up front,  
16 and if we are able to change the plans as we go along, my  
17 concern has been all along, as I've stated for the past  
18 few hours is that -- and I guess honing in, you said we  
19 can't anticipate every circumstance, and I guess to some  
20 degree that is what the company is trying to say is we  
21 can't anticipate every circumstance, either. But, back to  
22 your point, and my concern was that if you're looking at  
23 the forest you may not be seeing the trees, again, and  
24 anticipating certain things.

25 And I guess this question is for you and then

1 for staff to answer, and as bluntly as you can. If we  
2 were to approve these guidelines and work along with the  
3 guidelines as we can, change them, or whatever, will -- do  
4 you feel, and staff for you also, will we be able then to  
5 challenge, if we feel something, one of those trees, I  
6 wish I could elaborate more on what those trees are, but  
7 if one of those trees pop up and it is not prudent, I  
8 mean, the restraint to challenge the action, in other  
9 words. Can they then just turn around and say, well, we  
10 met the guidelines? Is that what you are saying? And,  
11 staff, if you can assure me that I can come back later and  
12 say, well, you may have met the guidelines, but this tree  
13 here doesn't -- it's not right. Am I then limited, in  
14 your opinion, OPC, and then staff if you could do that.  
15 And I know we have done this, but this is what I have to  
16 do. Sorry.

17 **MR. McGLOTHLIN:** I'll go first.

18 **COMMISSIONER ARGENZIANO:** Okay. Please.

19 **MR. McGLOTHLIN:** The word certainty has been  
20 used today. I believe from FPL's standpoint, the  
21 certainty they seek is the certainty that there will be no  
22 risk of disallowance. And I think that is not something  
23 that you can give them without diminishing the ability to  
24 protect ratepayers in a full prudence review.

25 And, secondly, Mr. McNulty gave what I think is

1 a good example of a situation in which you would be giving  
2 up the ability to regulate after the fact that provision  
3 that says the utilities are not expected to try to time  
4 their hedging. And so if they simply place the same  
5 quantity of hedges month-to-month without regard to  
6 indications that it's smarter to do more now and not  
7 later, then the Commission would be without the ability to  
8 review that when it conducts a prudence review after the  
9 fact. That's just one example. And one problem in trying  
10 to assess and be more specific with respect to delineating  
11 the areas in which you would be painting yourselves into a  
12 corner is that we can't project the future.

13 I have heard several individuals say, well, with  
14 respect to this time frame it was a rising market and the  
15 customers came out ahead. But I can point to a year ago  
16 when FPL's losses were \$800 million. And that's not by  
17 way of criticism, it's by way of illustrating that we  
18 can't predict what fuel costs are going to do in the  
19 future. And for those reasons, we remain opposed to the  
20 specific request being made of you.

21 **COMMISSIONER ARGENZIANO:** Staff.

22 **MR. McNULTY:** Commissioner, I guess I would just  
23 say that I believe that like the example that was raised  
24 by Mr. McGlothlin just now, that what constraint is there,  
25 and that he used as an example the constraint that I

1 raised, which is the constraint of not being able to  
2 utilize market timing is the idea that is most centrally  
3 expressed within the guidelines.

4           And I think that that is a basic aspect of  
5 hedging that staff believes is correct, is that when you  
6 place a hedge, the hedge -- there is no way to know  
7 whether the market after that point in time is going to go  
8 up or go down. And so it is an appropriate view to look  
9 at market timing as something that should not be a  
10 constraint on the utility. They should not be tempted to  
11 know the future as to whether or not the market is going  
12 to go up or down. And we do take that as the one slightly  
13 limiting aspect of the guidelines in terms of the review  
14 process that would impact the Commission.

15           Other than that, everything else defaults to the  
16 plan. And if the plans are, as the guidelines have  
17 established -- the guidelines would establish that the  
18 plans would be approved up front, everything else is  
19 basically to the Commission's disposal to review within  
20 the plans. So I don't think it diminishes your ability to  
21 review the actions of the utility in any regard, except it  
22 shows a clear preference to not holding the companies  
23 accountable to exercising market timing outside of the  
24 parameters of the plan that they have specified.

25           **COMMISSIONER ARGENZIANO:** Mr. Chairman.

1                   **CHAIRMAN CARTER:** You're recognized.

2                   **COMMISSIONER ARGENZIANO:** I'm sorry. Let me put  
3 it differently. And I understand what you are saying, but  
4 I need a different way of getting it into my brain. If  
5 the company follows the guidelines, and then I find as a  
6 Commissioner that there was something else that even  
7 though they followed the guideline really should have been  
8 looked at. And I know you can't decide what the fuel is  
9 going to be down the road, but there are indicators  
10 sometimes, you know, things that happen around the world  
11 that pretty much can give you a clue on whether prices --  
12 look the other day at all those people who ran to gas  
13 stations filling up their tanks and leaving no gas for  
14 anybody else. Something gave them a clue that something  
15 was coming, whether it was right or wrong. Sometimes it's  
16 vindicated.

17                   But I guess getting down to it, and that is my  
18 last question, if the company, as I said before, followed  
19 the guidelines, and I find that there was something else  
20 that really should have been looked at, do they have a  
21 point then of saying that, well, we followed the  
22 guidelines, so, you know, you can't -- and I understand  
23 the certainty they need, but I'm talking about something  
24 that really should be considered, and it's not in that  
25 guideline. What happens then? The company says I met the

1 guideline. Hey, I did what I had to do. Is that what  
2 will occur?

3 **MR. McNULTY:** Commissioner, I believe that the  
4 Commission at the time that it is making a prudence  
5 determination on the hedging activities of a utility can  
6 consider all factors, including what the actual results of  
7 the company were, what the elements of the plan were, and  
8 things that may not have been specified within the plan.  
9 So it's not --

10 **COMMISSIONER ARGENZIANO:** Then what --

11 **MR. McNULTY:** Excuse me. I'm sorry.

12 **COMMISSIONER ARGENZIANO:** I'm sorry. No, I cut  
13 you off.

14 **MR. McNULTY:** I don't believe that you have any  
15 constraints in terms of making your prudence review. If  
16 there is a specific aspect as an example I gave earlier  
17 where the company tried to stay within one guideline, but  
18 failed miserably with another guideline that was of  
19 importance, that's on the table for you to review and make  
20 a determination of prudence. It's not off the table.

21 **COMMISSIONER ARGENZIANO:** But, again, I'm sorry,  
22 Mr. Chairman. You're using the term guideline. I'm  
23 talking about outside of the guideline that I consider  
24 should have been considered, or is it one of those trees  
25 that was not specified in the guideline because you can't

1 encompass everything, and you can't think ahead of time of  
2 what everything may be include.

3 If I find something else that is not within that  
4 guideline and I think they should have known better, am I  
5 then painted in a corner? Because the company is going to  
6 say, hey, we followed the guideline.

7 **MR. McNULTY:** Commissioner, I would argue that  
8 you're not.

9 **COMMISSIONER ARGENZIANO:** Okay. That's on  
10 record, then. That's on record that if I find something  
11 in a guide that is outside of the guideline that should  
12 have been known, you're telling me -- see, I don't  
13 understand why you have guidelines, then.

14 **MR. McNULTY:** And I would say maybe too much is  
15 being made of these guidelines. I mean, in essence the  
16 guidelines boil down to you are going to approve a plan,  
17 and the companies are expecting to not employ market  
18 timing, and there is even an out within the guidelines for  
19 that. You can specify deviations for anything in Section  
20 IV. So, really, when you get down to what it is we are  
21 looking at today, we are just saying that we as a  
22 Commission are going to be reviewing and the Commission  
23 themselves will be approving a plan, and the company will  
24 use that plan.

25 Now, prudence down the road is going to

1 encompass what's in the plan, what's in the results, and  
2 maybe things that weren't contemplated, you know, in  
3 either the plan or the guidelines, but have evolved  
4 through the process of events that occurred in the year in  
5 question.

6 **COMMISSIONER ARGENZIANO:** Okay.

7 With that, Mr. Chairman, if that is the way it  
8 is, if there are guidelines and I'm not painted into a  
9 corner for something that is outside of that guideline,  
10 then I feel more comfortable. And that's why I want it on  
11 the record now. Because if there is something that comes  
12 up outside of that guideline, I'm hearing today that I  
13 would have the ability as a Commissioner, or any one of us  
14 have the ability then to say, hey, this does not meet the  
15 prudent decision-making that we require and need to  
16 protect the consumer.

17 **CHAIRMAN CARTER:** And that's on the record,  
18 Commissioner, and we have got it, and that gives us the  
19 opportunity to make a complete review of all the facts and  
20 all of the circumstances, and even including timing and  
21 things that, you know, there are some things we may not  
22 anticipate at this time that may happen down the road. So  
23 I think that's within the confines of that.

24 **MR. DEVLIN:** Mr. Chairman.

25 **CHAIRMAN CARTER:** Tim.

1           **MR. DEVLIN:** I was just wondering a couple of  
2 things. I don't believe Commissioner Edgar ever got an  
3 answer to her question awhile back about will the level of  
4 scrutiny and auditing be higher or lower with these  
5 guidelines.

6           **CHAIRMAN CARTER:** Can you break it down. Don't  
7 take us to New York to cross the street.

8           **MR. DEVLIN:** I will be very fast.

9           **CHAIRMAN CARTER:** Okay, you're recognized.

10          **MR. DEVLIN:** The answer, in my mind, is the  
11 level of auditing and scrutiny will be more, because the  
12 auditors will now have some guidelines or guidance, if you  
13 will, on what to be looking at and what to be judging.  
14 And I think the auditing review process will be more  
15 intense and more precise. I just wanted to give that  
16 answer.

17                   And the other thing, just as a suggestion, I  
18 think what is making the discussion kind of difficult is  
19 the guidelines are very broad. What is really important,  
20 I think, will be the plan that will come out of these  
21 guidelines that we don't have before you today, and I  
22 think Commissioner Argenziano has made that point. We  
23 don't have the specifics of the plans to evaluate, which  
24 will be the first part of our prudency review, if you  
25 will.

1           So I guess I would offer to the Commission that  
2 let's go through maybe one year, one cycle, and evaluate  
3 the plans, and if we need to come back, or maybe we will  
4 just commit that we will come back either way and take  
5 another look at these guidelines to see whether they need  
6 to be changed or not sometime next year, and we would  
7 commit to do that.

8           **COMMISSIONER ARGENZIANO:** Mr. Chairman.

9           **CHAIRMAN CARTER:** Commissioner Argenziano.

10          **COMMISSIONER ARGENZIANO:** Just to make sure  
11 that -- because what I heard staff telling me that I would  
12 have the ability if something was outside of those  
13 guidelines tells me then that right at this moment then  
14 I'm not diminishing my ability, okay, to look at prudence  
15 that may fall outside of those guidelines, or remove any  
16 consumer protections. I mean, with all due respect to  
17 OPC, and I worked very hard to try to get this out, but I  
18 want to put that on record. Because if I felt today that  
19 I didn't have the right to be able to look at something  
20 that falls outside of that guidelines and that took away  
21 from the consumer protection, I would not vote for this  
22 today. So getting that on record and making sure I want  
23 that understood, and I appreciate you lending me a minute  
24 to do that.

25          **CHAIRMAN CARTER:** Thank you, Commissioner. It

1 was, like, kind of pulling teeth to get those direct  
2 answers, but I think we have practiced dentistry without a  
3 license today, but I think we got there.

4           Commissioners, anything further? At this point  
5 in time I'm open for a suggestion for the disposition of  
6 this matter.

7           Commissioner Skop, you're recognized.

8           Commissioner Edgar.

9           **COMMISSIONER EDGAR:** Either way, I will take a  
10 stab at it and see if we get there. With the  
11 understanding from the discussion that we have all had  
12 today, my understanding and my motion is in this light,  
13 that what we have before us in Issues 2 and 3 is intended  
14 to be an improvement of the process and to give greater  
15 understanding and clarity to some of the steps within that  
16 process. That the after-the-fact review will still take  
17 place. And with that as a prelude, I would make a motion  
18 that we adopt staff's recommendation on Issues 2 and 3.

19           **COMMISSIONER SKOP:** Second.

20           **CHAIRMAN CARTER:** It has been moved and properly  
21 seconded that we adopt staff's recommendation on Issues  
22 2 and 3 as per our discussion from the bench and the  
23 questions that we elicited as well as the direction to  
24 staff.

25           Commissioners, any questions about the motion or

1 any concerns with that? Hearing none, all in favor let it  
2 be known by the sign of aye.

3 (Simultaneous affirmative vote.)

4 **CHAIRMAN CARTER:** All those opposed, like sign.  
5 Show it done.
