

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION

In the Matter of:

DOCKET NO. 130024-EI

PETITION FOR EXPEDITED APPROVAL
OF ASSET OPTIMIZATION INCENTIVE
MECHANISM, BY TAMPA ELECTRIC
COMPANY.

RECEIVED-FPSC
13 MAY -3 PM 1:13
COMMISSION
CLERK

PROCEEDINGS: COMMISSION CONFERENCE AGENDA
ITEM NO. 2

COMMISSIONERS
PARTICIPATING: CHAIRMAN RONALD A. BRISÉ
COMMISSIONER LISA POLAK EDGAR
COMMISSIONER ART GRAHAM
COMMISSIONER EDUARDO E. BALBIS
COMMISSIONER JULIE I. BROWN

DATE: Thursday, April 25, 2013

PLACE: Betty Easley Conference Center
Room 148
4075 Esplanade Way
Tallahassee, Florida

REPORTED BY: JANE FAUROT, RPR
Official FPSC Reporter
(850) 413-6732

P R O C E E D I N G S

CHAIRMAN BRISÉ: Moving on to Item Number 2.

MR. LESTER: Good morning, Commissioners. I'm Pete Lester with Staff.

Item 2 addresses Tampa Electric Company's petition for an incentive mechanism. Staff recommends that the Commission approve the request for an incentive mechanism. This should lower fuel factors in 2015 and encourage efficiency.

Issues 1 is whether to approve Tampa Electric's request, and should be taken up first. Issues 2 concerns a reporting requirement and is based on approval of Staff's recommendation for Issue 1.

This item is a Proposed Agency Action and representatives of Tampa Electric, OPC, and the Florida Retail Federation are here to speak.

CHAIRMAN BRISÉ: All right. Thank you.

So we will hear from Tampa Electric, then OPC, and then Florida Retail.

MR. BEASLEY: Thank you, Chairman Brisé, and Commissioners.

I'm Jim Beasley for Tampa Electric Company. To my left is J.R. McLelland who is Managing Director of Fuels Management for Tampa Electric. Also with me is Carlos Aldazabal who is the Director of Regulatory

1 Affairs for Tampa Electric.

2 We want to speak in support of your Staff
3 recommendation. We believe the Commission has for many
4 years recognized the benefits that incentive programs
5 can bring in the form of reduced costs for utility
6 customers. This program is very much in that category.
7 It has the hopes of bringing significant benefits to
8 Tampa Electric's customers in the form of lower fuel
9 costs.

10 It's not an easy thing to achieve. There are
11 goals set for Tampa Electric based on historical
12 experience as well as stretch goals which have to be
13 surpassed before the company will be able to share in
14 any of the savings brought about by this program.

15 This program is very similar to the one
16 recently approved for Florida Power and Light Company.
17 And like that program, it really is a no risk
18 proposition for customers. They stand to benefit from
19 every saving dollar that results from this program. We
20 would urge that you approve it, and we're happy to
21 answer any questions you may have.

22 **CHAIRMAN BRISÉ:** Okay. Thank you.

23 Ms. Christensen.

24 **MS. CHRISTENSEN:** Yes. Good morning,
25 Commissioners.

1 Patty Christensen on behalf of the Citizens of
2 Florida. I'm here to speak in opposition to the
3 approval of another asset optimization program. I have
4 several points that I would like to raise in support of
5 our position.

6 First, TECO's asset optimization program is
7 clearly modeled after FPL's, which, as you know, was
8 part of the FPL rate case settlement which is currently
9 on appeal. As such, it was only a single component of
10 the overall settlement and that was not an expanded
11 endorsement of the wholesale incentive program.

12 In addition, the FPL program was approved on a
13 trial basis, and after two years it was to be evaluated.
14 We think that you should evaluate this one program,
15 pilot program that has already been approved, the FPL
16 program, before you approve a similar program.

17 Our second objection is based on policy
18 grounds. We do not believe that regulators should have
19 to induce a monopoly to basically do with captive
20 customers to make the most efficient use of their
21 assets. We believe that is already part of the
22 utility's obligation to provide service at the lowest
23 reasonable cost. In a fully competitive market, TECO
24 would have to compete for market share to ensure its
25 survival. And in a competitive market, if TECO chose to

1 create an asset optimization type program, it would have
2 to make sure that the benefits to its customers and the
3 business were sufficient to offset the cost of the
4 program.

5 Here, as with the FPL program, there is no
6 demonstration that the potential increases in sales
7 would justify the cost of the program. TECO's proposal
8 is speculative as to whether any of the additional types
9 of transactions proposed will even come to pass, and the
10 recommendation does not have an independent analysis of
11 whether the customers will see increased benefits under
12 the proposed mechanism versus the current programs that
13 are in place.

14 Since the Commission acts in place of a
15 competitive market, in the absence of evidence
16 demonstrating the benefits to the customers, we believe
17 that the program should not go forward. And as a
18 natural monopoly, TECO currently enjoys the
19 extraordinary advantage of being a sole provider of an
20 essential service. As such, they have the opportunity
21 to earn a fair rate of return. And that, we believe,
22 should be all the incentive TECO needs to use its assets
23 in the most efficient manner, in addition to anything to
24 the contrary to support the argument that TECO is
25 currently not doing everything that it can to excel in

1 providing electric service.

2 Therefore, as I said before, it's an axiom of
3 regulation that it serves as a surrogate for the
4 marketplace. And in a fully competitive marketplace, a
5 company would strive for the most efficient use of its
6 assets to survive. And a program that requires
7 customers to pay extra for that which a competitive
8 market would demand is not a surrogate for competition.
9 In other words, a utility's past and current
10 inefficiencies should not become its future profit
11 centers.

12 Finally, we take issue with the inclusion of
13 the economic purchases in the incentive proposal, since
14 it's one of the utility's fundamental obligations to
15 provide service at the lowest reasonable cost. In the
16 FPL case, the Citizens' unrefuted testimony showed that
17 based on historical information, the customers would
18 have paid an additional \$47 million to FPL if the
19 economic purchase bonus program had been in place since
20 2001. The Citizens object to shifting of benefits from
21 the customers to the shareholders for meeting its
22 obligation to serve at the lowest reasonable cost.

23 In addition, utilities currently use economic
24 dispatch to achieve this objective. So TECO already
25 participates in the wholesale market to purchase power

1 when it's available at the lowest cost. There is no
2 developing of new markets here. Thus, the inclusion of
3 economic purchases to pay the utility a bonus is
4 antithetical to its core obligation of function to
5 provide that lowest cost service. Thank you.

6 **CHAIRMAN BRISÉ:** Thank you.

7 Mr. Wright.

8 **MR. WRIGHT:** Good morning. Thank you, Mr.
9 Chairman and Commissioners.

10 Schef Wright on behalf of the Florida Retail
11 Federation. I'll be brief. We join the Public Counsel
12 in opposing this program for the same reasons that we
13 opposed the asset optimization program proposed by FPL
14 in the settlement in that rate case. As a matter of
15 simple policy, utilities shouldn't get paid extra for
16 doing what they are already supposed to be doing.

17 In his testimony in Tampa Electric's pending
18 rate case, the company's president, Gordon Gillette,
19 stated that it is the company's primary goal to provide
20 adequate, safe, and reliable service at the lowest
21 reasonable cost. If it is truly the company's primary
22 goal to provide service at the lowest reasonable cost,
23 they don't need extra incentives. They shouldn't get
24 extra money for doing what they already acknowledge is
25 their primary goal. We would urge you to reject this

1 proposal. Thank you very much.

2 **CHAIRMAN BRISÉ:** Thank you.

3 TECO.

4 **MR. BEASLEY:** Yes, Mr. Chairman.

5 This program, like the Florida Power and Light
6 program, will give you an opportunity at the end of next
7 year to take a look at it and make sure it is working
8 properly and the way it has been represented to you.
9 Also, the cost of the program will not be recoverable
10 unless the savings cover those costs. So we wanted to
11 make those points.

12 The other points that OPC and Mr. Wright have
13 made on behalf of the Florida Retail Federation were
14 made in the Florida Power and Light case, and you
15 nevertheless saw the benefits of that program. This one
16 is very similar to it, and we would urge that you
17 approve it.

18 **CHAIRMAN BRISÉ:** All right. Thank you.

19 Commissioners.

20 Commissioner Balbis.

21 **COMMISSIONER BALBIS:** Thank you, Mr. Chairman.

22 I just want to make a couple of comments, and
23 I may have a question for staff. But this is -- this
24 program I reviewed in detail, and I did notice that
25 staff's review of this item really dealt with comparing

1 it to what we approved for Florida Power and Light. And
2 as was stated, the Florida Power and Light program was
3 part of a very large comprehensive settlement where
4 there were a lot of pros. There were some cons to it,
5 but it was overall a big picture review.

6 So I reviewed the transcripts from
7 December 13th where we discussed the FPL program along
8 with the other portions of the settlement. And in our
9 discussions, as I recall, it was rife with words such as
10 pilot program, workshop, generic proceeding, that, you
11 know, nothing precluded us from moving forward with that
12 type of activity to develop a program that is
13 beneficial, and that the FPL program was part of the
14 comprehensive settlement.

15 So the fact that this is not part of a
16 comprehensive settlement, and there are some items here
17 as I reviewed the program itself, especially
18 specifically short-term wholesale power purchases where
19 currently the customers receive 100 percent benefit from
20 that, and this new program customers would only receive
21 an 80 percent benefit, that does not appear to me to be
22 in the best interest of the customers.

23 So I think there are good items included in
24 this program. But comparing it to FPL and justifying it
25 just because we approved FPL when it was part of a

1 settlement, and this is not, gives me some pause.

2 **CHAIRMAN BRISÉ:** Thank you.

3 Commissioner Brown.

4 **COMMISSIONER BROWN:** Thank you, Mr. Chairman.

5 And, staff, I'd like to focus just on the
6 benefits right now of this program. Based on the
7 existing program, what benefits have the customers
8 received under the 80/20 split, if any?

9 **MR. MOURING:** Based on the existing mechanism,
10 if you compare the two programs, the existing incentive
11 mechanism and the proposed incentive mechanism, over the
12 last four years the customers received -- I don't have
13 the sum here -- it looks like about \$10 million in
14 benefits, and the shareholders of TECO received about
15 680,000 under the existing mechanism.

16 **COMMISSIONER BROWN:** Okay. Thank you. And if
17 we were to use the same data from the existing program
18 and apply it to the new mechanism, do you know what the
19 benefits would be?

20 **MR. MOURING:** If you compared the two, going
21 back over four years, like I said, the shareholders
22 received about \$680,000 in sharing that they would not
23 have received under the terms of the proposed incentive
24 mechanism.

25 **COMMISSIONER BROWN:** Okay. Thank you.

1 A question for TECO, if I may.

2 **CHAIRMAN BRISÉ:** Sure.

3 **COMMISSIONER BROWN:** Mr. Beasley, is this
4 program intended to be a pilot program similar to the
5 one that we approved?

6 **MR. BEASLEY:** This has the same feature where
7 you can come back and look at it in two years, or at the
8 end of next year, at the end of 2014.

9 **COMMISSIONER BROWN:** But I did notice that
10 there is no sunset provision or period that would be
11 typical of a pilot program, so I just wanted
12 clarification.

13 **MR. BEASLEY:** It is a pilot program, yes,
14 ma'am.

15 **COMMISSIONER BROWN:** Thank you.

16 **CHAIRMAN BRISÉ:** Commissioner Edgar.

17 **COMMISSIONER EDGAR:** Thank you, Mr. Chairman.

18 I would like the company to speak to one or
19 two of the points more specifically that OPC and the
20 Retail Federation brought up, particularly their
21 statement that the rate of return that the company has
22 been allowed and is allowed to earn should be sufficient
23 incentive to take all steps necessary to benefit the
24 customers, and the comment by OPC that a pass in
25 efficiency should not be a future profit center.

1 **MR. BEASLEY:** Commissioner, Tampa Electric
2 strives very hard to do its best. I think the
3 Commission expects the companies to give it their all,
4 but the Commission also has recognized that incentives
5 can bring about efforts that are above and beyond the
6 call of duty. In the way this program is structured,
7 Tampa Electric has a real challenge to get a penny of
8 the savings that the program produces.

9 It has to meet historical based challenges, it
10 must then go above and beyond the call of duty and meet
11 stretch goals that are significant. It has to do that
12 before it can share in any of the savings that are
13 obtained beyond that stretch goal. So it does produce
14 an incentive for above and beyond the call of duty
15 effort. And the Commission has recognized that those
16 types of incentives work. They have worked with the
17 generating performance incentive factor, you have used
18 them in incentive mechanisms throughout the '80s into
19 the '90s.

20 In the 2006 proceeding you considered the
21 GPIF, and you found it to be an incentive that works and
22 produces benefits for customers. You have incentives
23 for your employees. We have incentives for the
24 company's employees. There are incentives for customers
25 in the form of various conservation programs.

1 Incentives are a real part of what makes things operate
2 in the way that you want them to, and this incentive is
3 certainly designed to produce benefits for customers.
4 It's a no-risk program for customers, and we urge that
5 you approve it.

6 **COMMISSIONER EDGAR:** In a moment I would like
7 to come to staff to follow up on your statement about
8 there being no risk to customers. That is my
9 understanding, but I would like to ask our staff to
10 elaborate on that in a moment. But I am -- and I have
11 met with staff, I have reviewed it, I have discussed it
12 with my advisor, but this concept of above and beyond
13 I'm struggling with a little bit.

14 Again, coming back to the statements of OPC
15 and the Retail Federation that the utility should not be
16 paid more for doing what it already should do. That
17 there is the responsibility to take all reasonable steps
18 to reduce costs to the benefit of ratepayers. So how do
19 you match that up with this statement that this is,
20 quote, above and beyond the call of duty? If the call
21 of duty, in your words, I believe, is to take all
22 reasonable steps for potential savings to ratepayers,
23 why does this program not fall into that all reasonable
24 steps already? Why should it be something additional?

25 **MR. BEASLEY:** It could involve company

1 employees coming in on their -- in their time off, on a
2 weekend, pursuing efforts that's not expected of them as
3 part of their normal operation and function to achieve a
4 goal which they know if they achieve it the company is
5 going to share in the benefits.

6 It's like any incentive mechanism; it's
7 calling upon your employees to give an extra effort over
8 and above what's expected of them.

9 **COMMISSIONER EDGAR:** So this is an
10 over-and-above expectation of the employees, is that
11 different from of the company?

12 **MR. BEASLEY:** Of the company's total overall
13 efforts, including those of each of its employees.

14 **COMMISSIONER EDGAR:** Okay. And then if I may
15 come back to our staff on the point from a moment ago
16 about is there -- as this program is presented to us, as
17 the item is structured, is there any additional risk or
18 potential cost to customers, to ratepayers?

19 **MR. MOURING:** The Staff has not been able to
20 find any real risk to the customers, given the
21 safeguards that are built into this incentive mechanism
22 pilot program with the individual asset optimization
23 measures, each being reviewed, monitored, and eligible
24 for Commission review and approval before it's included
25 in the total gains calculation, coupled with the

1 provision about limiting O&M expense, incremental O&M
2 expense costs. And with the program in its entirety,
3 the framework being eligible for review at the end of
4 2014, Staff believes there's sufficient safeguards in
5 place to hold the customers safe.

6 **COMMISSIONER EDGAR:** Thank you. And just one
7 more follow-up, and I think I'm done for the time being.
8 But as I'm thinking this through, and still processing
9 your responses, Mr. Beasley, as this is structured, that
10 incentive or reward, does that go -- once the threshold
11 is met, does that go to the employees or does that go to
12 the shareholders?

13 **MR. BEASLEY:** It would go to the company, yes.
14 And Mr. McLelland may be able to elaborate a bit on your
15 earlier question about the efforts over and above what's
16 expected of the company.

17 **COMMISSIONER EDGAR:** Okay. I certainly am
18 interested in that additional response, but I'm going to
19 ask the question again. After the threshold is met
20 there is incentive dollars; do those go to the employees
21 or do they go to the shareholders?

22 **MR. BEASLEY:** They go to the company, the
23 shareholders. The employee themselves have incentives,
24 as well, that are financially beneficial to them.

25 **COMMISSIONER EDGAR:** Built into their

1 employment contract?

2 **MR. BEASLEY:** Yes, ma'am.

3 **COMMISSIONER EDGAR:** Okay.

4 **MR. McLELLAND:** In effect, the program as
5 proposed is an expansion of the current incentive
6 program where we have a built-in mechanism to share in
7 the proceeds of wholesale power sales. This program
8 will now include fuels related optimization as well as
9 optimization of purchases.

10 From our perspective, in order to take on that
11 responsibility of further optimizing the generation, the
12 fuel portfolio, the purchase portfolio, it requires the
13 company to take on certain risks which we bear
14 100 percent. Those types of risks are credit risk,
15 counter-party risks, performance risk, receivable risk,
16 and there is -- under the current scenario where we
17 receive zero incentive for that type of optimization,
18 the balance of the risk in a way is asymmetrical.
19 Effectively, we're taking on more risk without any type
20 of incentive or opportunity to participate in the
21 proceeds.

22 We believe that this proposed program is a
23 fair and balanced approach where we have a chance to
24 make some money from our good work. However, we don't
25 get one nickel until we reach a threshold which from an

1 historical perspective is quite a bit higher than what
2 we have seen in the last four years.

3 Just a point of clarification. From the
4 numbers that I see here looking at it over the previous
5 four years, when you look at purchases and sales
6 combined, it's a little bit more than \$6 million. The
7 proposal that we have on the table right now is -- we
8 don't receive any benefit in terms of incentive until we
9 reach the \$9 million. Our customers would receive
10 100 percent up to that point. I very much believe that
11 is a stretch goal, given what we see in the marketplace
12 today and looking at it from a historical perspective.

13 **CHAIRMAN BRISÉ:** Commissioner Balbis.

14 **COMMISSIONER BALBIS:** Thank you.

15 I have a couple of questions for the company,
16 and it's about the historical gains on sales and
17 purchases that have been made. And you mentioned the
18 stretch goal, and I think stretch goals are good and may
19 provide an incentive for better performance.

20 Do you know what the gains in sales and
21 purchases the company received in 2007?

22 **MR. McLELLAND:** I don't have those numbers in
23 front of me right now. I have numbers that go back to
24 2009.

25 **COMMISSIONER BALBIS:** Okay. I had staff

1 provide me your response to one of the data requests, I
2 believe Number 34, that indicate the company received
3 over \$19 million in gains in 2007, over \$25 million in
4 2008, \$9 million in 2009, \$11 million in 2010.

5 How was that a stretch goal then, if you have
6 historically made significant gains above those
7 threshold levels?

8 **MR. McLELLAND:** I understand the question. In
9 that time period Tampa Electric had several major
10 projects ongoing at its coal-fired generation
11 facilities. I believe they were SCR projects. So the
12 units were unavailable and so we were purchasing a large
13 quantity of power.

14 Coupled with that, we were in a price
15 environment for national gas that was in excess of
16 double of where the market is trading for today. As you
17 may know, as the gas price goes up it does impact the
18 marginal price for electricity. And so the savings that
19 were generated in those years were the direct result of
20 high gas prices as well as a significant amount of
21 coal-fired generation offline for Tampa Electric, which
22 we don't believe represents the scenario we are in today
23 or where we are heading in the next two or three years,
24 certainly the time frame considered in this program.

25 **COMMISSIONER BALBIS:** But can you predict what

1 plants will go offline for accidental reasons, et
2 cetera? My concern is that you have picked a narrow
3 window for the average for the stretch goals. And if
4 you just open it up a little bit, that stretch goal
5 should be a lot higher if you look at the numbers.

6 **MR. McLELLAND:** I understand. And in a
7 program like this, we believe setting the threshold is
8 probably one of the most important parts of the program
9 for us and our customers. And, you know, after a very
10 serious analysis, we determined that what was occurring
11 on our system in 2006, '07, '08, and '09 was a
12 modernization of sorts of our coal generation
13 facilities. In our planning horizon that scenario just
14 does not exist. We don't have that large or that scope
15 of projects ongoing.

16 Also, in terms of our modeling, we do look at
17 things like forced outage rates. We do look at it from
18 a historical perspective. So although I do agree,
19 Commissioner, that it's very difficult to predict, we do
20 some modeling around that based on a historical
21 perspective. And we believe that the threshold that we
22 have proposed here represents what we expect to see on a
23 going-forward basis.

24 **COMMISSIONER BALBIS:** Okay. And a follow-up
25 on that concerning some of the projects that you said

1 resulted in additional purchases and additional gains.
2 We approved a repowering project, I believe for the
3 Bartow Facility, and how will that play into it? I
4 mean, will the existing facility be offline so you are
5 going to have to have additional purchases? Is that
6 another anomaly that could result in additional gains?

7 **MR. McLELLAND:** I believe you're referring to
8 the Polk.

9 **COMMISSIONER BALBIS:** Polk, I'm sorry.

10 **MR. McLELLAND:** To the best of my knowledge,
11 the project that Polk would require us to add a steam
12 turbine to four simple cycle generation units. And
13 based on the engineering design and project development
14 timeline, the simple cycle peakers will be out of
15 service for a short period of time. I don't know the
16 exact days, but it was certainly less than 60 days that
17 the Polk CTs would be out of service.

18 In addition to that, I think it's important to
19 note that we are talking about CTs that would be going
20 out of service during the conversion. Those units tend
21 to sit on the top of the generation stack as it's priced
22 today. And so it would be a big difference from
23 displacing, let's say, baseload units like we saw in
24 2006 and '07 that sit on the bottom of our stack. So
25 much less savings opportunity because the difference

1 between our cost to generate and the power market will
2 be a lot tighter than if we were just displacing Big
3 Bend, our coal or baseload combined cycle.

4 **COMMISSIONER BALBIS:** Okay. And a question
5 for staff. Did you take that into account in reviewing
6 the appropriateness of that stretch goal on future
7 plants that are going offline on what has happened in
8 2007, 2008, and 2009, or did you -- how did you review
9 the appropriateness of that goal, or did you?

10 **MR. LESTER:** We did not take into account
11 future. We took in the four years from 2009 to 2012.

12 **COMMISSIONER BALBIS:** Okay. And then another
13 question for the company. Focusing on wholesale power
14 purchases, which is where my big sticking point is,
15 because correct me if I'm wrong, I assume that your
16 company uses an economic dispatch model and on an hourly
17 basis dispatches whichever is the most economical unit,
18 correct?

19 **MR. McLELLAND:** That's correct, we do.

20 **COMMISSIONER BALBIS:** And if power is
21 available for purchase that is cheaper than dispatching
22 your own unit, the company will enter into that
23 agreement or purchase that power?

24 **MR. McLELLAND:** That's correct. There are
25 some parameters, some limitations in terms of minimum

1 run times of units and start charges and things like
2 that. But, yes, we do run an economic dispatch model.
3 And when we find opportunities to purchase within the
4 market below our generation, as long as there is
5 transmission and we can execute the transaction, we
6 absolutely optimize the system in that manner.

7 **COMMISSIONER BALBIS:** Okay. And I'm glad you
8 confirmed that. Because, again, that's my major
9 sticking point, that that is a program that the company
10 is using and doing well. And so that's -- the
11 customers, they are not getting anything additional with
12 this incentive program with that. And I had a problem
13 with that with Florida Power and Light as well.
14 However, that was part of the comprehensive settlement
15 where there were other benefits that outweighed the
16 limitation in that incentive program.

17 So I still have an issue with that, and I have
18 an issue with the stretch goal. If it were to be
19 increased, I think it would provide a little more
20 comfort to myself and the ratepayers in that it may be
21 more appropriate, especially looking at the disparity of
22 the historical gains that they have had in the recent
23 past.

24 The other question I have for Staff, there
25 seems to be some overlap with the GPIF program that's in

1 place. That incentive program was developed over a
2 thorough proceeding. And, Mr. Ballinger, can you
3 explain what, if any, concerns there would be with this
4 program along with the GPIF?

5 **MR. BALLINGER:** Yes, sir.

6 Staff has identified a potential overlap or
7 tension between these two incentive programs that you
8 have. As you are aware, and as TECO has acknowledged,
9 the GPIF targets baseload units which are your most
10 efficient units on your system that run 24/7 and try to
11 provide fuel savings. And that's how GPIF is tied, is
12 it sets targets for availability and heat rates to
13 hopefully gain additional fuel savings. If availability
14 increases, that baseload unit is available more time and
15 you can generate fuel savings. If it is not available,
16 there is a fuel cost.

17 Where we see the tension is especially on the
18 purchase. Let's say a GPIF unit, such as a Big Bend
19 unit, a baseload unit trips for a forced outage. That
20 puts the company in a position to purchase more power,
21 which they should, and actually larger gains because now
22 you have taken a baseload unit offline for a day or two,
23 a week, we don't know.

24 So in the GPIF program, the utility could
25 incur a penalty because of that performance for that

1 unit. But with this asset optimization you could incur
2 a reward, because now it has gone towards your threshold
3 of purchased power.

4 So we see these two programs may not work in
5 harmony and there may have to be some adjustment. And
6 Staff is exploring that as part of the GPIF
7 investigation that we have been doing this last year,
8 and we will raise it in the upcoming fuel hearing. We
9 had a meeting with the parties a week or so ago
10 addressing when testimony would be due and topics to be
11 covered, and this was one of them.

12 **COMMISSIONER BALBIS:** Okay. Thank you.

13 That's all I had at this time.

14 **CHAIRMAN BRISÉ:** Commissioner Graham.

15 **COMMISSIONER GRAHAM:** Thank you, Mr. Chairman.

16 Actually, I've got several things here to hit
17 on. The first one, we talked about above and beyond. I
18 guess I can put it in perspective so that I understand,
19 and I know this was going through my head when we were
20 dealing with the Florida Power and Light rate case. I
21 put on my hat of a prior job back when I was a county
22 commissioner and we had to deal with collection of trash
23 and going to landfills. And the job that we were hiring
24 those people for was to collect all the trash and throw
25 it onto the landfill.

1 The above and beyond is for them to decide,
2 well, we're going to put in a little station so we can
3 collect the methane and generate power and then,
4 therefore, we are going to share that profit with both
5 the county and with ourselves. To me that was going
6 above and beyond what you hired them for, because their
7 job was to collect the trash and put it in the landfill.

8 Above and beyond was also collecting paper out
9 of there, recycling that paper, and selling that; also a
10 little profit center, and also prolonging the life of
11 the landfill. Once again, the same thing, pulling the
12 tires out of that landfill, pelletizing those tires,
13 using that stuff to put on playgrounds for kids.

14 I mean, so that's the way I looked at being
15 above and beyond. The job that we hired them for, what
16 they were supposed to be doing was one thing. And even
17 though we may be putting more money into this, or there
18 may be more things going into this, your overall is --
19 the net overall, there's going to be more money coming
20 out and going back to the ratepayers. That's what I see
21 with the above and beyond, and that's why I was all for
22 the Florida Power and Light deal, and that's why this
23 deal makes some sense to me.

24 The other side of that is, and to my
25 colleague, Commissioner Balbis, the Florida Power and

1 Light deal was part of the deal. It wasn't a
2 stand-alone issue. And one of the things we said back
3 then was this wasn't setting a precedent, and that we
4 wanted Staff to look into this sort of thing and to see
5 if this is something we don't roll out to everybody else
6 as a whole.

7 So this is not necessarily apples and apples
8 here that we are looking at, because this was part of
9 the give and take that happened with Florida Power and
10 Light. That being said, I thought it was a good idea
11 for Florida Power and Light. I think it's a good idea
12 here. I think there are still some questions out there
13 that need to be answered. The modeling that you spoke
14 of earlier where you got up -- where you went to the
15 threshold number, which I believe was like \$9 million, I
16 don't remember seeing that modeling, and I don't know if
17 Staff got into some of that stuff, and some of the
18 questions that Commissioner Balbis brought up that would
19 make him feel a little bit more comfortable about that
20 \$9 million, maybe it should be a different number.

21 I think maybe we should spend some time and
22 look at that and see if we can come back with a better
23 number, a harder number, or a number that Commissioner
24 Balbis feels a little bit more comfortable with.

25 I need to look through that modeling, so I

1 can't say that I'm comfortable or not comfortable with
2 the \$9 million, but maybe we should take two weeks or
3 whenever our next meeting is and come back with another
4 set of numbers.

5 And the last point I have here is this is
6 supposed to be looked at again at the end of 2014. What
7 I'd like to see happen is let's look at this as a real
8 project, because I think that is kind of a short period
9 of time. I think going with a fixed two-year period
10 from when the time it starts to the time it ends is
11 probably the better thing to do, and then to have it
12 actually sunset at that point. So that forces everybody
13 to come back to the table and rejustify. If it's a good
14 thing now, it should be a good thing then. And we can
15 look at those hard numbers, and I think a fixed two-year
16 period, a fixed two-year window gives us more data to
17 actually look at.

18 I mean, because the way you look at it now, by
19 the time you get things up and running and ramped up,
20 you probably only have about a year's worth of data to
21 look at. And I think that would be kind of difficult
22 for us to make judgment calls. And that's all I have to
23 say.

24 **CHAIRMAN BRISÉ:** All right.

25 Commissioner Brown.

1 **COMMISSIONER BROWN:** And I wanted to
2 reiterate, I was getting ready -- I had my light on
3 before Commissioner Graham mentioned, but I share the
4 same sentiment about the two-year period. I think we
5 need a full two years. I would prefer a sunset similar
6 to what we approved. I originally preferred a generic
7 docket, but here we have, you know, we have the largest
8 Florida IOU testing it out. We've got two years, we
9 have got a period to evaluate that data. Having the
10 smallest IOU as well in Florida, I think we should
11 definitely have a sunset period and a two-year window, a
12 full two years.

13 **CHAIRMAN BRISÉ:** Thank you. I have one
14 question, and one of your other questions was addressed
15 a little bit with the GPIF issue. That was one of the
16 issues I wanted to have Staff address. But the other
17 issue I want Staff to address for me is how did staff
18 come to the conclusion that this incentive program was
19 beneficial to consumers recognizing the responsibility
20 of the company?

21 **MR. MOURING:** Well, Staff arrived at the
22 conclusion that this would be beneficial to the
23 customers based on the stated objective of it. It's
24 designed to generate additional gains for the customers,
25 to reduce fuel factors, fuel costs that the customers

1 will have to pay. And Staff did have a lot of concerns
2 with it, but Staff does believe that the safeguards that
3 I discussed earlier address a lot of those concerns.

4 And, again, it is -- I certainly appreciate it
5 is very similar to Power and Light's. But Staff did
6 look at this individually, and individually examined all
7 the asset optimization measures that the company
8 believes it's going to be engaging in in the near
9 future, and how the program works, how the savings are
10 going to flow through to the customers. And based on
11 our analysis, we believe it is -- it should be on a
12 trial basis, but it should benefit the customers.

13 **CHAIRMAN BRISÉ:** Maybe I'll ask it another
14 way. So you provide an incentive -- if someone provides
15 an incentive, the incentive is there for something that
16 is not being done now so that they can do something
17 else, right, that is more beneficial? What are they
18 doing, and what does it take for them to do what is more
19 beneficial?

20 So what are the consumers gaining from that?
21 And what mechanism, or what does the company actually
22 have to do to get there? That's what I'm really trying
23 to get at. Do they have to employ more people; do they
24 have to do, you know --

25 **MR. MOURING:** Well, I won't answer for Tampa

1 Electric, but they do anticipate to have some additional
2 incremental O&M costs. And, again, that is another one
3 of those safeguards where the recovery of any
4 incremental O&M costs would be limited to total gains
5 received, generated by the program. But perhaps Tampa
6 Electric could give you some additional detail on what
7 exactly would need to be done.

8 **CHAIRMAN BRISÉ:** Okay. Tampa Electric.

9 **MR. McLELLAND:** When we talk about going above
10 and beyond duty, and the truth is we already work a lot
11 of late nights and weekends in the programs that we have
12 now. What we are referring to is going about the
13 day-to-day activity to include fuel, all fuel, coal,
14 natural gas, purchased power, and sales in a manner that
15 has a greater breadth and depth than we are doing today.
16 Specifically what I mean there is looking to other
17 markets, infusing creativity into the process,
18 integrated transactions with electric and gas, tolls,
19 reverse tolls, things of that matter.

20 Looking further away from our door step.
21 Instead of just buying at interfaces connected to us,
22 you know, go two wheels away, three wheels away. Look
23 for diversity between Florida, SERC, TVA. Those are the
24 type of opportunities that we are referring to.

25 In the context of, you know, what it takes to

1 do that, to answer your question, we're looking at
2 engaging other counter-parties. That means
3 contractually putting in force contracts with
4 counter-parties we don't have contracts with. There's
5 expense associated with that. There's time associated
6 with that. When we are spending our time on that, we
7 are not doing other things.

8 Yes, we do have some enhancements we'd like to
9 make to some of our optimization programs, modeling, the
10 way we interface between the front, middle, back office.
11 Things like actualization of flows, settlement,
12 receivables. Those are all costs that we'll incur
13 associated with a program like this. And with this
14 heightened attention to this broad set of optimization
15 opportunities, we think if we do it and do it well and
16 are able to represent for our customers a savings
17 greater than what they've experienced in the last three
18 or four years, we should be able to participate and
19 participate in a fashion that as we do better our
20 customers do better.

21 As you know, yes, we do start to participate
22 over \$9 million. However, our customers do, as well.
23 We don't get 100 percent of it. I believe it's a 60/40
24 split. So if we do better than we have done in the last
25 four or five years, we get to participate, but our

1 customers do, as well.

2 **MR. ALDAZABAL:** I would add that, as a point
3 of reference, through March of this year, the Company is
4 it 1.4 million in savings. So if you trend that out, I
5 mean, we are projected to be at about 6 million, which
6 is what we included in our petition. So we do have a
7 stretch goal as far as \$9 million, in the sense that we
8 would have to get to that \$9 million threshold before
9 the Company would start sharing in any gains associated
10 with this program.

11 **CHAIRMAN BRISÉ:** Okay.

12 Commissioner Graham.

13 **COMMISSIONER GRAHAM:** Thank you, Mr. Chairman.

14 I was going to move forward with a motion,
15 unless there's any other questions. I didn't know.

16 **CHAIRMAN BRISÉ:** I think there's further
17 questions.

18 **COMMISSIONER GRAHAM:** Okay. I'll hold off.

19 **CHAIRMAN BRISÉ:** Commissioner Balbis.

20 **COMMISSIONER BALBIS:** Thank you, Mr. Chairman.

21 And hopefully the maker of the motion will --
22 this might be an appropriate time to say this. I just
23 want to reiterate the concerns I have with this. I
24 think we're close. I think we can probably get there,
25 but I also feel that the development of an incentive

1 program should be made through a thought-out careful
2 process that gets all of the information and to see
3 what's appropriate for the stretch goals, the threshold
4 levels, the percentages, any impacts to existing
5 incentive programs like GPIF. Those are all of the
6 factors that need to be taken in in the development of
7 this program.

8 We approved Florida Power and Light's program
9 because it was a comprehensive settlement and all of the
10 discussion was let's see as that data comes in, let's
11 see if it's a good program. And if this were a generic
12 proceeding where we could get all of that information, I
13 would fully support it. Unfortunately, we seem to be
14 faced with this docket, a take-it or leave-it situation,
15 which I have concerns with.

16 And it really focuses on the short-term
17 wholesale power purchases. Currently, customers receive
18 100 percent of the savings, period. In this program
19 customers will only receive 40 percent. I cannot see
20 how the customers will better from this, regardless of
21 where the threshold is. Going from 100 percent to
22 40 percent does not make any sense.

23 However, if that were removed and the sunset
24 provisions that my colleagues have suggested, and if we
25 can come to maybe a more appropriate threshold level.

1 But to be honest, if we remove that segment of the
2 incentive program, I'm more comfortable with that
3 threshold level.

4 **CHAIRMAN BRISÉ:** Okay. Commissioner Brown.

5 **COMMISSIONER BROWN:** Thank you. Just a follow
6 up to what Commissioner Balbis just said.

7 I believe the response is that Curt indicated
8 earlier, it emphasized that the proposed program
9 actually produces more benefits to the customers than
10 the existing program, based on the historical data that
11 we have over the past four years.

12 **MR. MOURING:** That's absolutely correct,
13 Commissioner. If you look at -- if you go back and look
14 at the existing mechanism, the shareholders got to
15 receive about \$680,000 worth of the wholesale sales
16 gains whereas under the terms of the new policy the
17 shareholders will not be eligible to receive anything.
18 So the customers would actually be \$680,000 better off
19 if the proposed mechanism were in place four years ago
20 as it's written here with these thresholds.

21 **COMMISSIONER BALBIS:** Thank you. I just
22 wanted to point that out.

23 **CHAIRMAN BRISÉ:** Okay. Commissioner Edgar.

24 **COMMISSIONER EDGAR:** Thank you, Mr. Chair. I
25 would just like to ask the Company to respond,

1 specifically, if possible, to Commissioner Balbis'
2 concern and maybe suggestion about removing the
3 short-term wholesale power purchases component of the
4 proposal.

5 **MR. ALDAZABAL:** Just one point of
6 clarification. Again, on the purchase side, we would
7 not share in any savings until the \$9 million threshold
8 was reached. So any purchases that occurred, any
9 economic purchases, any savings on those up to
10 \$9 million threshold wouldn't go 100 percent back to
11 ratepayers. So if we were operating the same way we
12 have traditionally operated, the customer would be
13 significantly better off because we have not crossed the
14 threshold from that standpoint, at least historically
15 over the last four years. From that point forward,
16 customers would get 40 percent of the savings, up to 20
17 million, and from that point forward it's 50 percent of
18 the savings.

19 **CHAIRMAN BRISÉ:** Ms. Christensen.

20 **MS. CHRISTENSEN:** I just wanted to point out,
21 based on the company's data response to Number 34, if
22 you look in year 2010, they crossed the \$9 million
23 threshold it appears to me. Plus, a couple of other
24 issues that I think are things that need to be
25 considered is that they would be getting the -- they

1 would recover, since there wouldn't be gains -- my
2 understanding of the program, and they can certainly
3 correct me if I'm wrong, they would recover the O&M
4 costs, the additional O&M costs because there were gains
5 on the program, even if they don't reach the \$9 million
6 threshold.

7 So with the inclusion of the purchased power
8 which currently now go 100 percent to customers, if they
9 have any positive gains on those purchased powers in any
10 of those years, the O&M costs are essentially going to
11 be covered. So those are risks that are going to be
12 borne by the customers for something that they currently
13 get 100 percent of the benefit for.

14 And the other thing that was a little bit
15 concerning and not clear from the recommendation as to
16 how the splits would go. If you look on, I believe it
17 is Page 3 of the recommendation -- yes, at the bottom
18 where they talk about asset management agreements where
19 they are going to contract with a third party to develop
20 some of the newer markets, they talk about doing this,
21 outsourcing this to a third party in exchange for a
22 premium. However, they don't discuss how that premium
23 would be split. Does that go to the gains? Would that
24 be part of the calculation that would come to the
25 benefit of the customers?

1 So, I mean, for all the reasons that I think
2 we articulated earlier, but for these specific points
3 and looking at just the four years of data and not going
4 even back to '06, which would clearly have worked in the
5 favor of the company, I think there are still some
6 outstanding issues of whether or not there's benefits to
7 the customers. From the way the plan is set up to
8 include purchased power, I think that really shifts
9 benefits from -- benefits the customers are currently
10 getting to where the shareholders would be getting some
11 of those benefits, as well.

12 So thank you for indulging me.

13 **CHAIRMAN BRISÉ:** Sure. I think Commissioner
14 Edgar probably didn't get a response to her question,
15 so --

16 **COMMISSIONER EDGAR:** You did give us some
17 additional clarification, and I appreciate that. But
18 I'm going to ask you again, more specifically, as I
19 believe I heard Commissioner Balbis to suggest, if on
20 the functions that are listed on Page 3 of the
21 discussion of the item, if the short-term wholesale
22 power purchases were to be removed as one of the
23 functions included in the program, would that be
24 problematic, or what other potential impacts or concerns
25 would you have?

1 **MR. ALDAZABAL:** From a problematic
2 standpoint, it would not be problematic. The dilemma is
3 that the threshold, the \$9 million threshold was
4 predicated including purchases on there, so it would
5 have to be adjusted accordingly to exclude economic
6 purchases. And there would be a slight inconsistency
7 between how the FPL program was structured.

8 Obviously, we understand that it was part of a
9 settlement, but there would be some inconsistencies
10 between programs. So that was one of the primary
11 reasons why we structured it the way we did structure
12 it.

13 **CHAIRMAN BRISÉ:** Commissioner Balbis.

14 **COMMISSIONER BALBIS:** And just to clarify, I
15 agree that if that is removed, there should be an
16 adjustment to the threshold. And I wouldn't mind giving
17 staff administrative authority to come back to us or to
18 adjust that appropriately, and I believe that may
19 resolve some of the GPIF concerns as well.

20 So I think it might be a solution here where I
21 think there would be safeguards, and be fair to the
22 company as well if we adjust the threshold, if we take
23 the purchases out.

24 **CHAIRMAN BRISÉ:** Sure.

25 Commissioner Graham.

1 **COMMISSIONER GRAHAM:** Thank you, Mr. Chairman.

2 As I mentioned before, there's no time
3 constraint on this, so I don't think there's a problem
4 with pushing this back to our next meeting. It sounds
5 like there's some concerns about where the threshold is.
6 I can't say that I'm looking to start pulling things out
7 of what goes into the threshold, but I don't have a
8 problem with giving staff more time to look at this
9 stuff again. And OPC brought up some good concerns, and
10 Commissioner Balbis brought up some good concerns about
11 where the threshold is. And you can come back in two
12 weeks and have the exact same threshold number, but, you
13 know, you have gone through it all, you have gone
14 through the modeling that TECO had, and everybody has a
15 better comfort level to where that number is.

16 And I would also like to see this thing
17 extended, as I said, as Commissioner Brown said as well,
18 to a full two-year period and putting in some sort of a
19 sunset provision in there. I'm saying all that just for
20 staff to know and to take note of it.

21 I guess my motion would be if we can just
22 defer this until our next hearing, and for staff to get
23 together with Commissioner Balbis and also with TECO and
24 make sure that everybody feels very comfortable about
25 that threshold number. And I guess I need direction,

1 also from other Commissioners. If we're looking to take
2 any of those purchases out of that threshold, or if we
3 want to stay the way the program is written right here
4 currently.

5 **CHAIRMAN BRISÉ:** Commissioner Edgar.

6 **COMMISSIONER EDGAR:** Thank you, Mr. Chairman.
7 And I'm not sure if we are in motion discussion, but let
8 me just take it and run with it, if I may. Thank you.

9 I think we have had very good discussion, but
10 I do think some additional information and analysis
11 would be helpful. I know that the timelines for getting
12 information filed for the next round of agenda sometimes
13 can come very quickly, particularly for our staff with
14 the work that they do. So I would suggest maybe
15 recognizing that there is no timeline that we could give
16 them to the meeting after the next meeting, that that
17 might be a little helpful.

18 So I would suggest from our discussion that we
19 ask our staff to do some additional analysis and maybe
20 bring back a revised or an item with additional
21 information, that they look particularly at a two-year
22 sunset, that they do further analysis regarding the
23 proposed \$9 million threshold, and also analysis as to
24 if the short-term wholesale power purchases were to be
25 removed as one of the included functions what the

1 similar appropriate threshold would be.

2 And if we go to the meeting after the next
3 meeting from the information I have here, I think that
4 would be the June 25th. I don't know that that needs to
5 be a hard date, but what I would ask, since we have had
6 the discussion, that our staff go ahead and pursue this,
7 working with the company, of course, to get additional
8 information, and with the intervenors, and bring it back
9 timely.

10 **CHAIRMAN BRISÉ:** Okay. Does that require a
11 motion?

12 **COMMISSIONER EDGAR:** Whatever is your
13 preference, Mr. Chairman.

14 **CHAIRMAN BRISÉ:** Commissioner Graham.

15 **COMMISSIONER GRAHAM:** Okay. June 25th seems a
16 long way back, but I guess if nobody has a problem with
17 that date, I don't either. So I guess what we are
18 instructing staff to do is come back with an Option A
19 and a Option B, and then we can make the determination
20 at the time, and we'll have the threshold for both those
21 numbers? Okay. I just wanted to make sure that was
22 clear.

23 **CHAIRMAN BRISÉ:** All right. Any further
24 comments, Commissioners? No further comments on this
25 item? Okay.

1 With that, I think staff understands the
2 direction. I think the parties understand the direction
3 of where we are at this point. And so we're going to
4 defer this item, and we're going to take it back up
5 again at a different time.

6 Right now we are looking at two meetings out,
7 which I think is June 25th. But that is not a firm
8 date, and we can work with my office to put it back in
9 at a time that's most appropriate.

10 Okay. Anything else on this item? Okay.

11 Seeing none, Commissioner Edgar --

12 **COMMISSIONER EDGAR:** Thank you. I'm not sure
13 if I said this or not, so I will either repeat it or
14 want to make sure that I did. I recognize that there
15 may be -- that there is some, perhaps, value in
16 consistency from a program as it is for one utility to
17 the next, which is part of the reason that I
18 specifically would like to see additional analysis as it
19 is, but also if that one component were to be removed so
20 that we would have that data. Again, recognizing that
21 having differences between the programs could also have
22 some unintended additional workload or analytic
23 difficulties.

24 **CHAIRMAN BRISÉ:** All right. Thank you.

25 Sure. Commissioner Graham.

1 **COMMISSIONER GRAHAM:** Sorry, Mr. Chairman, I
2 hate to prolong this. But I guess the question I have
3 for TECO, I know one of the disadvantages of having a
4 sunset provision in here is it makes everything seem
5 temporary. And I guess the question I have is is that
6 causing a -- would that cause more of a problem, the
7 fact -- I like for things to sunset. I think for things
8 to be justified, because if they are right now they
9 should be right two years from now. But does that
10 sunset -- what financial burdens does that put on you or
11 does it put any? I mean, are you looking to add -- I
12 know in the Florida Power and Light deal they are
13 looking to add three people and other things along that
14 line, and I didn't know how you planned on achieving
15 this incentive.

16 **MR. McLELLAND:** Right now our strategy would
17 be to redeploy some folks and have them focus on the
18 sales side, a broader reach. We would need some
19 contract administration help. And we recognize by
20 taking that extra workload on, we take on the extra
21 expense. We believe in this program. We believe in
22 incentives. We think our customers will benefit from
23 it.

24 I know the people that I work with and the
25 effort they'll put forth. And we believe that the

1 results of this program will be favorable to us and our
2 customers. And believe that on a going-forward basis,
3 not only us, but our customers and the Commission will
4 want us to go forward. So, yes, we are taking some
5 risk, but we are cautiously optimistic that this type of
6 incentive program will be very successful which would
7 allow us to continue to benefit from the expense that we
8 may have.

9 I would also like to mention that consistency
10 is important. In effect, you have already provided FPL
11 with an incentive to become more proactive than they
12 have ever been. They are ought forging relationships in
13 the form of contracts and moving upstream. And it,
14 quite frankly, has the potential to turn into something
15 of a competitive advantage. And, so, you know, they are
16 a good well-run company. They are hard to keep up with.
17 And certainly having, you know, the same platform to
18 work from as they have is important to us and our
19 customers. So, thank you.

20 **COMMISSIONER GRAHAM:** I just wanted for you
21 guys to -- for your take-away to know that -- and I
22 speak for myself, but we are all -- I'm all in favor for
23 this incentive program. I just want to make sure,
24 number one, this is just coming from -- this is coming
25 to us differently than Florida Power and Light did, and

1 so we just need to be careful moving forward.

2 If this is setting some sort of a template for
3 everybody else to come forward, we want to make sure
4 that our I's are dotted and our T's are crossed. And so
5 if we need to take more time to get more data to make
6 more people feel more comfortable, then I think that's
7 just what needs to happen. And if we are looking at
8 this as being a trial, I think, you know, locking it
9 down and making an actual trial obviously is a better
10 way of doing it.

11 And so it just may take a little time, but I
12 just want for you guys to walk away knowing that this is
13 something that I think is a good thing. And if you go
14 off of what we did with Florida Power and Light, I think
15 this Commission as a whole thinks it's a good thing. We
16 just want to make sure it's done correctly.

17 **CHAIRMAN BRISÉ:** I guess I'll add something to
18 that. Recognize the reference to FPL, and recognize
19 that as part of the settlement there was the incentive
20 program that started there for them, and I think
21 everyone recognizes that that was a unique set of
22 circumstances, and so forth.

23 And as per the discussion during that process,
24 I think the Commission was quite clear that if we were
25 going to approve any other incentive program, it would

1 require a process for us to make sure that it made sense
2 for everybody else or each individual case. So I think
3 the fact that we are moving this out will give us an
4 opportunity to make some -- to do some further analysis
5 to make sure that it makes sense.

6 I'm not opposed to incentives. I think the
7 Commission has shown that it is open to incentives that
8 make sense, but they have to make sense for the
9 consumers first, and I think that that is where we want
10 to be.
