HAND-DELIVERED

Ms. Ann Cole, Commission Clerk Florida Public Service Commission 2540 Shumard Oak Boulevard Tallahassee, FL 32399-0850

Dear Ms. Cole:

Quincy: (850) 627-7651

Enclosed are two (2) copies of the Financial Review, Allocated Cost of Service Analysis and Retail Rate Revisions - Executive Summary prepared by Talquin Electric Cooperative and GDS Associates. The revised tariff sheets are in Appendix A and the revised tariff sheets in legislative format are in Appendix B.

Also enclosed are four (4) additional copies of the revised tariff sheets and two (2) additional copies of the revised tariff sheets in legislative format.

Given the desired September 1, 2013 effective date for the rate revisions we would appreciate the Commission Staff performing its review as expeditiously as practicable. During the review process should the staff have any questions, please do not hesitate to contact me (eugenek@talquinelectric.com; 850-627-7651) or Steve Shurbutt at GDS Associates (Steve.Shurbutt@gdsassociates.com; 770-425-8100).

We will certainly appreciate approval of these revised tariff sheets since we believe the changes are in the overall best interest of the Cooperative and its members.

Sincerely,

TALQUIN ELECTRIC COOPERATIVE, INC.

Eugene Kanikovsky

Director of Financial Services

DISCUSSION

Introduction

The following discussion and exhibits contained herein comprise the analyses, findings and recommendations regarding the financial review, allocated cost of service analysis and retail rate revisions performed as a joint effort of GDS Associates, Inc. and the management and staff of Talquin Electric Cooperative, Inc. (the "Cooperative"). This discussion consists of three major sections. The first section reviews the overall financial position of the Cooperative and examines its total revenue requirements. The second section of this discussion describes the allocated cost of service analysis, which provides a means of evaluating the revenues produced by each rate class in light of the costs incurred to serve each rate class. The third section addresses the retail rate revisions that have been made based upon the Cooperative's overall revenue requirements, cost of service considerations, and other factors which should be considered in the design of retail electric rates.

The financial review, the allocated cost of service analysis and the bases for the retail rate revisions were presented to the Cooperative's Board of Trustees for their review and approval. After consideration and discussion, the Board unanimously approved the revised retail rates contained in this report. Subject to review and approval by the Florida Public Service Commission, the revised rates will become effective September 1, 2013.

Financial Review

The financial review performed to determine the overall adequacy of the Cooperative's existing retail rate charges is based upon a twelve-month test period ending December 31, 2011. The revenues and expenses actually booked for that twelve-month period are shown in column (c) on page 1. The operating margin shown in that column of \$396,025 produces a 1.07 Times Interest Earned Ratio (TIER) and a 3.40% rate of return on net rate base (ROR). The Cooperative also realized non-operating margins from several sources, which increases the total margins to \$4,773,969. The resulting TIER and ROR on total margins are 1.85 and 5.87%, respectively.

Adjustments were made to both the actual revenue and expenses booked for the test period, as shown in column (d) on page 1. A brief explanation of those adjustments is contained in the Footnotes to Adjusted Income Statement shown on page 2.

The resulting adjusted revenue and expense figures shown in column (e) on page 1 produce operating margins of \$2,686,479 which yields a 1.43 TIER and a 5.05% ROR. Including non-operating margins, a total adjusted margin of \$6,273,623 is realized, thereby producing a 2.01 TIER and a 7.08% ROR.

The rate of return figures just mentioned are based upon an adjusted net rate base of \$176,861,170 as developed on page 3. The working capital allowances for purchased power expense and operations and maintenance expenses are computed assuming cash flow lags of 15-days and 45-days, respectively. Materials and supplies and prepayments amounts are computed using a 13-month average of the balances during the test period.

On the basis of the foregoing financial review, the Cooperative's present retail rates produce barely adequate revenue to satisfy the minimum financial ratios required by its lenders of long-term debt, and generate a rate of return on operating margins that is less than its 6.25% overall weighted cost of capital. Therefore, a modest rate increase of 2.0% will be needed for the Cooperative to meet its mortgage obligations and continue to operate on a sound financial basis.

Referring to column (f) on page 1, the retail rate revisions produce an overall increase in annual revenue of approximately \$2,500,000. That change in total annual revenue enables the Cooperative to experience operating margins of \$5,188,607, producing a 1.83 TIER and 6.46% ROR. The 1.83 TIER is reasonably above the minimum 1.10 TIER requirement on operating margins set forth in the Cooperative' mortgage agreements. Further, the 6.46% ROR should enable the Cooperative to meet its overall cost of capital, and perhaps gradually increase equity in the long-run. Including non-operating margins, the total margins increase to \$8,774,751. The TIER and ROR based upon that total margin level are 2.41 and 8.49%, respectively. Therefore, the retail rate revisions later described herein will generate sufficient margins to allow the Cooperative to continue operating on a sound financial basis.

Allocated Cost of Service

The cost of service analysis performed herein is an allocation of the net rate base and adjusted operating expenses shown in column (e) of the Adjusted Income Statement. The purpose of the allocation is to determine the adequacy of the revenues produced by each of the Cooperative's existing retail rate schedules in light of the cost of providing service to the consumers served under

those rate schedules. In this manner, a more equitable, cost-based approach can be utilized in determining revenue requirements and retail rate revisions for the various retail rate schedules.

The basic approach for the cost allocation contained herein is consistent with the methods and procedures recommended in the cost allocation manual published by the National Association of Regulatory Utility Commissioners. This cost allocation process consists of three basic steps: functionalization, classification and allocation. Functionalization of the utility plant investment and adjusted operating expenses is achieved essentially through the Cooperative's normal accounting procedures. That is, the uniform system of accounts maintains records of various utility plant and expense items by function, such as transmission, distribution and general functions.

The classification portion of the cost analysis consists of dividing utility plant investment and expense items into cost-related components such as demand, consumer, energy and revenue. Investment or expense items which might be solely dedicated to a particular consumer or consumer group are designated "directly assigned" and are attributed directly to the rate class in which that consumer or consumer group resides. In most instances, the minimum service method was used to determine the Minimum Distribution System ("MDS") and classify utility plant items into consumer and demand-related components. The adjusted operating expenses were then classified according to the classification of the related utility plant item. For instance, operations expense for underground lines (account 584) is classified on the same basis as the classification of underground conductors and devices utility plant (account 367).

The allocation of classified utility plant items and operating expenses requires the development of certain allocation factors based upon the rate classes' operating statistics. Those allocators recognize the number of consumers served, energy consumption and demand

responsibility for the respective rate classes. Weighting factors were applied to the number of consumers for the allocation of many consumer-related items. These weights are based upon the relative investment in meters, services and transformers typically required to serve consumers in the respective rate classes.

The demand-related portion of most utility plant items and operating expenses was allocated based upon an average and excess demand responsibility. The demand portion of purchased power expense was allocated based upon the estimated contribution of the respective rate classes' contribution to the peak demands coincident with Seminole ECI's monthly system peak ("CP" demand). Production power expense was allocated based on each rate class's 8-Month CP demand responsibility to the Seminole monthly system peak demand for the months of December through February and June through September. The transmission portion of purchased power expense was allocated on each rate class's 12-Month CP demand responsibility. Those coincident peak demand responsibility methodologies were used since they reflect the manner in which the Cooperative is billed by Seminole ECI under its wholesale rate. Rate class demands for the residential and general service non-demand rate classes were determined using interval load data from Cooperative's recently installed AMI system. Demands for the outdoor lighting rate class were computed based on the connected lamp and ballast wattages and the estimated hours of operation. Demands for the other rate classes were estimated based on data taken from load research studies performed by Florida investor-owned electric utilities.

Energy-related cost was allocated on the basis of kilowatt-hours sold to the respective rate classes during the twelve-month test period. These energy sales were adjusted for losses to reflect the required kilowatt-hours input to the system.

The results of the cost allocation process under the present retail rates are summarized on page 5. The results indicate that the Residential rate class produces a rate of return just slightly lower than the total system rate of return. The TEC/TAL rate class produces a somewhat lower rate of return. The General Service/Non-Demand, General Service Demand, and General Service Large Demand rate classes produce rates of return higher than the system rate of return. The Outdoor Lighting rate class exhibits a rate of return well below the total system rate of return.

Page 6 indicates the rates of return produced by the revised retail rates. Those rates of return reflect the annual revenue changes for the respective rate classes, as summarized on page 4. The retail rate revisions reflect the results of the allocated cost of service analysis in that they produce revenue changes that bring the rates of return for most of the rate classes closer to parity. In addition, recognition of the customer-related cost of service is evidenced in the retail rate revisions by the increases made to the Facilities Charges.

Retail Rate Revisions

The following retail rate revisions are designed to produce aggregate annual revenue sufficient to satisfy the Cooperative's overall revenue requirements, including adequate TIER and ROR levels. They are based upon traditional retail rate design parameters such as cost of service, revenue stability, comparable charges and provisions employed by neighboring utilities, consumer acceptance, ease of administration, avoidance of sudden adverse impacts, promotion of energy conservation and more efficient use of electric service.

Two types of rate revisions were applied to most or all rate classes to better reflect the Cooperative's cost of service. First, the Facilities Charges were increased, though not as much as the

cost of service analysis indicates they could be increased. Secondly, \$0.01300 per kilowatt-hour sold of purchased power cost was "rolled in" the base rate charges so that the charges stated in the rate schedules would more clearly indicate the total costs recovered by the Cooperative's retail rates, as opposed to the Power Cost Adjustment (PCA) constituting a sizable portion of the typical bill. Specific revisions made to each rate schedule are described in the following paragraphs.

Residential Service Schedule RS

The Cooperative's present and revised rate charges for residential service are shown on page 9. The present charges consist of a monthly Facilities Charge of \$10.00 for single-phase service (with a \$20.00 minimum monthly charge) and \$25.00 for three-phase service, and a single Energy Charge of \$0.1039 per kWh for all kWh. The revised rate contains monthly Facilities Charges of \$20.00 for single-phase service and \$35.00 for three-phase service. Note that the revised \$20.00 Facilities Charge is still less than the cost of approximately \$34.00 indicated by the cost of service analysis. The revised rate also contains a new two-step inverted rate Energy Charge, where the first 1,000 kWh is billed at \$0.1061 per kWh and all energy over 1,000 kWh is billed at \$0.1211 per kWh. This inverted Energy Charge should encourage energy conservation. The higher Facilities Charge will help to offset the Cooperative's additional financial risk associated with implementing the inverted Energy Charge, since it decouples a greater portion of revenues from energy sales. In doing so, the higher Facilities Charge also diminishes the Cooperative's disincentive to promote energy conservation. The overall annual revenue increase for the residential rate class, net of rolling in the current PCA factor, is approximately \$2,000,000, or 2.16%. Sample bill comparisons for residential consumers at various monthly energy usage levels are shown on pages 10 and 11.

General Service/Non-Demand Schedule GS

The Cooperative's present rate for general service/non-demand applies to non-residential service where the consumer's demand is less than 50 kW. The present rate structure and charges shown on page 12, as well as the revised rate structure and charges on that same page, are identical to those in Residential Schedule RS. Thus, this rate class will be billed the new two-step inverted Energy Charge. The overall annual revenue increase is roughly \$291,000 or 3.37%. Sample bill comparisons for general service/non-demand consumers at various monthly energy usage levels are shown on pages 13 and 14.

General Service Demand Schedule GSD

The present General Service Demand rate shown on page 15 consists of a \$65.00 Facilities Charge, a Demand Charge of \$7.25 per kW for all billing demand in excess of 20 kW, and an Energy Charge of \$0.0725 per kWh for all kWh. The revised rate reflects the same Facilities Charge of \$65.00 and Demand Charge of \$7.25 per kW for all billing demand in excess of 20 kW. The Energy Charge is increased to \$0.0855 per kWh to reflect the roll-in of the current PCA of \$0.01300 per kWh. This rate revision produces no change in the annual revenue.

General Service Large Demand Schedule GSLD

The General Service Large Demand rate schedule is applicable to consumers with measured monthly kilowatt demands above 1,000 kW. Only four consumers currently meet the size qualifications for this rate class. The GSLD rate shown on page 16 consists of a Facilities Charge of \$300.00, a Demand Charge of \$7.50 per kW and an Energy Charge of \$0.06198 per kWh. The rollin of the PCA factor of \$0.01300 per kWh produces a new Energy Charge of \$0.07498 per kWh. This revision produces no change in the annual revenue.

Outdoor Lighting Service Schedule LS

The Cooperative currently offers two charges for outdoor lighting fixtures, as shown on page 17. The monthly rates are separated into Equipment and Energy components. The present Equipment Charges consist of a \$5.85 Standard Security Fixture Charge and a \$9.42 Non-Standard Fixture Charge. The present Energy Charges consist of a \$3.15 Standard Security Fixture Charge and a \$5.08 Non-Standard Fixture Charge. The revised Equipment Charges consist of \$7.10 for a Standard Security Fixture and \$10.67 for a Non-Standard Fixture. The Cooperative also bills a \$1.75 Subdivision Light Charge per residence in designated street lighting districts. The revised charge is \$2.00 per residence. The overall annual revenue increase for the lighting rate class is approximately \$243,000, or 13.96%.

Wholesale Power Cost Adjustment Schedule PCA

The Cooperative utilizes the Wholesale Power Cost Adjustment Schedule PCA to track changes (increases or decreases) in the average cost of purchased power. The present base rates recover an average annual cost of \$0.06778 per kilowatt-hour sold. As previously mentioned, the revised base rates incorporate the recovery of an additional \$0.01300 per kilowatt-hour sold into the base rates. Thus, the new benchmark for computing PCA factors billed in conjunction with the revised base rates is \$0.08078 per kilowatt-hour sold.

Conclusion

In light of the analyses described above and prudent retail rate design parameters, the revised rate charges contained herein should allow the Cooperative to meet its operating and financial obligations by the application of fair and reasonable rate charges and provisions to its member-consumers. However, the Cooperative will continue to monitor its financial position, cost of service

parameters and retail rate schedules. Subject to the Cooperative's overall financial position, subsequent retail rate revisions will be implemented to maintain the Cooperative's sound financial condition and to employ cost-based charges reflecting enhanced equity among the rate classes.

Footnotes To Adjusted Income Statement

- 1. Adjustment to base rate revenue to reflect the application of the base rates effective September 2011 to adjusted test year billing units.
- 2. Application of current Wholesale Power Cost Adjustment (WPCA) factor of \$0.01300 per kWh to the applicable adjusted test year billing units (not applied to outdoor lighting kWh).
- 3. Elimination of the wholesale power cost adjustment reconciliation booked for the test year.
- 4. Adjustment to reflect the Seminole ECI 2013 wholesale rate charges applied to the adjusted test year kWh purchases from Seminole. The Seminole kWh purchases are determined by applying a 5.50% annual line loss factor to the CY 2011 kWh sales.
- 5. SEPA wholesale charges reflect an annualization of the SEPA rates effective in September 2011.
- Adjustments to reflect estimated changes in operating expenses relative to the test year booked amounts.
- 7. Increase in Account 597 Meter Maintenance of \$250,000 to reflect meter inspection program started in 2012.
- 8. Redistribution of labor-related administrative and general expenses.
- Increase in depreciation expense based on TEC's 2012 Budget.
- 10. Increase in interest expense based on TEC's 2012 Budget.
- 11. Reduction in Other Interest Expense associated with replacing line of credit funds with long-term financing.
- 12. Removal of non-reoccurring extraordinary items.

APPENDIX A REVISED TARIFF SHEETS

GENERAL SERVICE/NON-DEMAND

RATE SCHEDULE GS

AVAILABILITY:

Available throughout the entire territory served by the Cooperative in accordance with Cooperative's Rules and Regulations for Electric Service.

APPLICABLE:

To any electric service, other than residential, for light and power purposes where the measured monthly KW demand is less than 50 KW and not specifically served under another rate.

CHARACTER OF SERVICE:

Single phase or three phase, 60 Hertz, at one available standard voltage, at a single point of delivery.

CONDITIONS OF SERVICE:

Resale of service or standby service not permitted hereunder. Service is subject to Cooperative's Rules and Regulations for Electric Service. Three phase service may be limited to areas near the Cooperative's three phase lines.

MONTHLY RATE:

Facilities Charge:

Single Phase Service \$20.00

Three Phase Service \$35.00

Energy Charge: First 1,000 KWH \$0.1061 per KWH

Over 1,000 KWH \$0.1211 per KWH

WHOLESALE POWER COST ADJUSTMENT:

Monthly rate is subject to adjustment according to the Wholesale Power Cost Adjustment Schedule PCA.

WHOLESALE

POWER COST ADJUSTMENT

SCHEDULE PCA

APPLICABILITY:

To be added to monthly rate of each filed rate schedule in which reference is made to this schedule.

CALCULATION:

All energy charges shall be increased or decreased by 1/10 mill (\$0.0001) per kilowatt hour for each 1/10 mill or major fraction thereof, by which the average wholesale purchased power cost per kilowatt hour sold for the preceding month exceeds or is less than 80.78 mills (\$0.08078).

The level of this adjustment for billing purposes may be established at the option of management from historical and/or projected trends. The total bill adjustment for each fiscal year shall as nearly as possible equal the actual cost of power sold adjustment for the same fiscal year computed from actual operating data. Any over or under collection of wholesale power cost adjustment for a fiscal year shall be returned or recovered in the subsequent fiscal year's wholesale power cost adjustments.

DISCUSSION

Introduction

The following discussion and exhibits contained herein comprise the analyses, findings and recommendations regarding the financial review, allocated cost of service analysis and retail rate revisions performed as a joint effort of GDS Associates, Inc. and the management and staff of Talquin Electric Cooperative, Inc. (the "Cooperative"). This discussion consists of three major sections. The first section reviews the overall financial position of the Cooperative and examines its total revenue requirements. The second section of this discussion describes the allocated cost of service analysis, which provides a means of evaluating the revenues produced by each rate class in light of the costs incurred to serve each rate class. The third section addresses the retail rate revisions that have been made based upon the Cooperative's overall revenue requirements, cost of service considerations, and other factors which should be considered in the design of retail electric rates.

The financial review, the allocated cost of service analysis and the bases for the retail rate revisions were presented to the Cooperative's Board of Trustees for their review and approval. After consideration and discussion, the Board unanimously approved the revised retail rates contained in this report. Subject to review and approval by the Florida Public Service Commission, the revised rates will become effective September 1, 2013.

Financial Review

The financial review performed to determine the overall adequacy of the Cooperative's existing retail rate charges is based upon a twelve-month test period ending December 31, 2011. The revenues and expenses actually booked for that twelve-month period are shown in column (c) on page 1. The operating margin shown in that column of \$396,025 produces a 1.07 Times Interest Earned Ratio (TIER) and a 3.40% rate of return on net rate base (ROR). The Cooperative also realized non-operating margins from several sources, which increases the total margins to \$4,773,969. The resulting TIER and ROR on total margins are 1.85 and 5.87%, respectively.

Adjustments were made to both the actual revenue and expenses booked for the test period, as shown in column (d) on page 1. A brief explanation of those adjustments is contained in the Footnotes to Adjusted Income Statement shown on page 2.

The resulting adjusted revenue and expense figures shown in column (e) on page 1 produce operating margins of \$2,686,479 which yields a 1.43 TIER and a 5.05% ROR. Including non-operating margins, a total adjusted margin of \$6,273,623 is realized, thereby producing a 2.01 TIER and a 7.08% ROR.

The rate of return figures just mentioned are based upon an adjusted net rate base of \$176,861,170 as developed on page 3. The working capital allowances for purchased power expense and operations and maintenance expenses are computed assuming cash flow lags of 15-days and 45-days, respectively. Materials and supplies and prepayments amounts are computed using a 13-month average of the balances during the test period.

On the basis of the foregoing financial review, the Cooperative's present retail rates produce barely adequate revenue to satisfy the minimum financial ratios required by its lenders of long-term debt, and generate a rate of return on operating margins that is less than its 6.25% overall weighted cost of capital. Therefore, a modest rate increase of 2.0% will be needed for the Cooperative to meet its mortgage obligations and continue to operate on a sound financial basis.

Referring to column (f) on page 1, the retail rate revisions produce an overall increase in annual revenue of approximately \$2,500,000. That change in total annual revenue enables the Cooperative to experience operating margins of \$5,188,607, producing a 1.83 TIER and 6.46% ROR. The 1.83 TIER is reasonably above the minimum 1.10 TIER requirement on operating margins set forth in the Cooperative' mortgage agreements. Further, the 6.46% ROR should enable the Cooperative to meet its overall cost of capital, and perhaps gradually increase equity in the long-run. Including non-operating margins, the total margins increase to \$8,774,751. The TIER and ROR based upon that total margin level are 2.41 and 8.49%, respectively. Therefore, the retail rate revisions later described herein will generate sufficient margins to allow the Cooperative to continue operating on a sound financial basis.

Allocated Cost of Service

The cost of service analysis performed herein is an allocation of the net rate base and adjusted operating expenses shown in column (e) of the Adjusted Income Statement. The purpose of the allocation is to determine the adequacy of the revenues produced by each of the Cooperative's existing retail rate schedules in light of the cost of providing service to the consumers served under

those rate schedules. In this manner, a more equitable, cost-based approach can be utilized in determining revenue requirements and retail rate revisions for the various retail rate schedules.

The basic approach for the cost allocation contained herein is consistent with the methods and procedures recommended in the cost allocation manual published by the National Association of Regulatory Utility Commissioners. This cost allocation process consists of three basic steps: functionalization, classification and allocation. Functionalization of the utility plant investment and adjusted operating expenses is achieved essentially through the Cooperative's normal accounting procedures. That is, the uniform system of accounts maintains records of various utility plant and expense items by function, such as transmission, distribution and general functions.

The classification portion of the cost analysis consists of dividing utility plant investment and expense items into cost-related components such as demand, consumer, energy and revenue. Investment or expense items which might be solely dedicated to a particular consumer or consumer group are designated "directly assigned" and are attributed directly to the rate class in which that consumer or consumer group resides. In most instances, the minimum service method was used to determine the Minimum Distribution System ("MDS") and classify utility plant items into consumer and demand-related components. The adjusted operating expenses were then classified according to the classification of the related utility plant item. For instance, operations expense for underground lines (account 584) is classified on the same basis as the classification of underground conductors and devices utility plant (account 367).

The allocation of classified utility plant items and operating expenses requires the development of certain allocation factors based upon the rate classes' operating statistics. Those allocators recognize the number of consumers served, energy consumption and demand

responsibility for the respective rate classes. Weighting factors were applied to the number of consumers for the allocation of many consumer-related items. These weights are based upon the relative investment in meters, services and transformers typically required to serve consumers in the respective rate classes.

The demand-related portion of most utility plant items and operating expenses was allocated based upon an average and excess demand responsibility. The demand portion of purchased power expense was allocated based upon the estimated contribution of the respective rate classes' contribution to the peak demands coincident with Seminole ECI's monthly system peak ("CP" demand). Production power expense was allocated based on each rate class's 8-Month CP demand responsibility to the Seminole monthly system peak demand for the months of December through February and June through September. The transmission portion of purchased power expense was allocated on each rate class's 12-Month CP demand responsibility. Those coincident peak demand responsibility methodologies were used since they reflect the manner in which the Cooperative is billed by Seminole ECI under its wholesale rate. Rate class demands for the residential and general service non-demand rate classes were determined using interval load data from Cooperative's recently installed AMI system. Demands for the outdoor lighting rate class were computed based on the connected lamp and ballast wattages and the estimated hours of operation. Demands for the other rate classes were estimated based on data taken from load research studies performed by Florida investor-owned electric utilities.

Energy-related cost was allocated on the basis of kilowatt-hours sold to the respective rate classes during the twelve-month test period. These energy sales were adjusted for losses to reflect the required kilowatt-hours input to the system.

The results of the cost allocation process under the present retail rates are summarized on page 5. The results indicate that the Residential rate class produces a rate of return just slightly lower than the total system rate of return. The TEC/TAL rate class produces a somewhat lower rate of return. The General Service/Non-Demand, General Service Demand, and General Service Large Demand rate classes produce rates of return higher than the system rate of return. The Outdoor Lighting rate class exhibits a rate of return well below the total system rate of return.

Page 6 indicates the rates of return produced by the revised retail rates. Those rates of return reflect the annual revenue changes for the respective rate classes, as summarized on page 4. The retail rate revisions reflect the results of the allocated cost of service analysis in that they produce revenue changes that bring the rates of return for most of the rate classes closer to parity. In addition, recognition of the customer-related cost of service is evidenced in the retail rate revisions by the increases made to the Facilities Charges.

Retail Rate Revisions

The following retail rate revisions are designed to produce aggregate annual revenue sufficient to satisfy the Cooperative's overall revenue requirements, including adequate TIER and ROR levels. They are based upon traditional retail rate design parameters such as cost of service, revenue stability, comparable charges and provisions employed by neighboring utilities, consumer acceptance, ease of administration, avoidance of sudden adverse impacts, promotion of energy conservation and more efficient use of electric service.

Two types of rate revisions were applied to most or all rate classes to better reflect the Cooperative's cost of service. First, the Facilities Charges were increased, though not as much as the

cost of service analysis indicates they could be increased. Secondly, \$0.01300 per kilowatt-hour sold of purchased power cost was "rolled in" the base rate charges so that the charges stated in the rate schedules would more clearly indicate the total costs recovered by the Cooperative's retail rates, as opposed to the Power Cost Adjustment (PCA) constituting a sizable portion of the typical bill. Specific revisions made to each rate schedule are described in the following paragraphs.

Residential Service Schedule RS

The Cooperative's present and revised rate charges for residential service are shown on page 9. The present charges consist of a monthly Facilities Charge of \$10.00 for single-phase service (with a \$20.00 minimum monthly charge) and \$25.00 for three-phase service, and a single Energy Charge of \$0.1039 per kWh for all kWh. The revised rate contains monthly Facilities Charges of \$20.00 for single-phase service and \$35.00 for three-phase service. Note that the revised \$20.00 Facilities Charge is still less than the cost of approximately \$34.00 indicated by the cost of service analysis. The revised rate also contains a new two-step inverted rate Energy Charge, where the first 1,000 kWh is billed at \$0.1061 per kWh and all energy over 1,000 kWh is billed at \$0.1211 per kWh. This inverted Energy Charge should encourage energy conservation. The higher Facilities Charge will help to offset the Cooperative's additional financial risk associated with implementing the inverted Energy Charge, since it decouples a greater portion of revenues from energy sales. In doing so, the higher Facilities Charge also diminishes the Cooperative's disincentive to promote energy conservation. The overall annual revenue increase for the residential rate class, net of rolling in the current PCA factor, is approximately \$2,000,000, or 2.16%. Sample bill comparisons for residential consumers at various monthly energy usage levels are shown on pages 10 and 11.

General Service/Non-Demand Schedule GS

The Cooperative's present rate for general service/non-demand applies to non-residential service where the consumer's demand is less than 50 kW. The present rate structure and charges shown on page 12, as well as the revised rate structure and charges on that same page, are identical to those in Residential Schedule RS. Thus, this rate class will be billed the new two-step inverted Energy Charge. The overall annual revenue increase is roughly \$291,000 or 3.37%. Sample bill comparisons for general service/non-demand consumers at various monthly energy usage levels are shown on pages 13 and 14.

General Service Demand Schedule GSD

The present General Service Demand rate shown on page 15 consists of a \$65.00 Facilities Charge, a Demand Charge of \$7.25 per kW for all billing demand in excess of 20 kW, and an Energy Charge of \$0.0725 per kWh for all kWh. The revised rate reflects the same Facilities Charge of \$65.00 and Demand Charge of \$7.25 per kW for all billing demand in excess of 20 kW. The Energy Charge is increased to \$0.0855 per kWh to reflect the roll-in of the current PCA of \$0.01300 per kWh. This rate revision produces no change in the annual revenue.

General Service Large Demand Schedule GSLD

The General Service Large Demand rate schedule is applicable to consumers with measured monthly kilowatt demands above 1,000 kW. Only four consumers currently meet the size qualifications for this rate class. The GSLD rate shown on page 16 consists of a Facilities Charge of \$300.00, a Demand Charge of \$7.50 per kW and an Energy Charge of \$0.06198 per kWh. The rollin of the PCA factor of \$0.01300 per kWh produces a new Energy Charge of \$0.07498 per kWh. This revision produces no change in the annual revenue.

Outdoor Lighting Service Schedule LS

The Cooperative currently offers two charges for outdoor lighting fixtures, as shown on page 17. The monthly rates are separated into Equipment and Energy components. The present Equipment Charges consist of a \$5.85 Standard Security Fixture Charge and a \$9.42 Non-Standard Fixture Charge. The present Energy Charges consist of a \$3.15 Standard Security Fixture Charge and a \$5.08 Non-Standard Fixture Charge. The revised Equipment Charges consist of \$7.10 for a Standard Security Fixture and \$10.67 for a Non-Standard Fixture. The Cooperative also bills a \$1.75 Subdivision Light Charge per residence in designated street lighting districts. The revised charge is \$2.00 per residence. The overall annual revenue increase for the lighting rate class is approximately \$243,000, or 13.96%.

Wholesale Power Cost Adjustment Schedule PCA

The Cooperative utilizes the Wholesale Power Cost Adjustment Schedule PCA to track changes (increases or decreases) in the average cost of purchased power. The present base rates recover an average annual cost of \$0.06778 per kilowatt-hour sold. As previously mentioned, the revised base rates incorporate the recovery of an additional \$0.01300 per kilowatt-hour sold into the base rates. Thus, the new benchmark for computing PCA factors billed in conjunction with the revised base rates is \$0.08078 per kilowatt-hour sold.

Conclusion

In light of the analyses described above and prudent retail rate design parameters, the revised rate charges contained herein should allow the Cooperative to meet its operating and financial obligations by the application of fair and reasonable rate charges and provisions to its member-consumers. However, the Cooperative will continue to monitor its financial position, cost of service

parameters and retail rate schedules. Subject to the Cooperative's overall financial position, subsequent retail rate revisions will be implemented to maintain the Cooperative's sound financial condition and to employ cost-based charges reflecting enhanced equity among the rate classes.

Footnotes To Adjusted Income Statement

- 1. Adjustment to base rate revenue to reflect the application of the base rates effective September 2011 to adjusted test year billing units.
- 2. Application of current Wholesale Power Cost Adjustment (WPCA) factor of \$0.01300 per kWh to the applicable adjusted test year billing units (not applied to outdoor lighting kWh).
- Elimination of the wholesale power cost adjustment reconciliation booked for the test year.
- 4. Adjustment to reflect the Seminole ECI 2013 wholesale rate charges applied to the adjusted test year kWh purchases from Seminole. The Seminole kWh purchases are determined by applying a 5.50% annual line loss factor to the CY 2011 kWh sales.
- 5. SEPA wholesale charges reflect an annualization of the SEPA rates effective in September 2011.
- Adjustments to reflect estimated changes in operating expenses relative to the test year booked amounts.
- 7. Increase in Account 597 Meter Maintenance of \$250,000 to reflect meter inspection program started in 2012.
- 8. Redistribution of labor-related administrative and general expenses.
- 9. Increase in depreciation expense based on TEC's 2012 Budget.
- 10. Increase in interest expense based on TEC's 2012 Budget.
- 11. Reduction in Other Interest Expense associated with replacing line of credit funds with long-term financing.
- 12. Removal of non-reoccurring extraordinary items.

TALQUIN ELECTRIC COOPERATIVE, INC.

WHOLESALE

POWER COST ADJUSTMENT

SCHEDULE PCA

APPLICABILITY:

To be added to monthly rate of each filed rate schedule in which reference is made to this schedule.

CALCULATION:

All energy charges shall be increased or decreased by 1/10 mill (\$0.0001) per kilowatt hour for each 1/10 mill or major fraction thereof, by which the average wholesale purchased power cost per kilowatt hour sold for the preceding month exceeds or is less than 80.78 mills (\$0.08078).

The level of this adjustment for billing purposes may be established at the option of management from historical and/or projected trends. The total bill adjustment for each fiscal year shall as nearly as possible equal the actual cost of power sold adjustment for the same fiscal year computed from actual operating data. Any over or under collection of wholesale power cost adjustment for a fiscal year shall be returned or recovered in the subsequent fiscal year's wholesale power cost adjustments.

Issued by: Tracy A. Bensley

FIFTH REVISED SHEET NO. 12.01 CANCELS FOURTH REVISED SHEET NO. 12.01

TALQUIN ELECTRIC COOPERATIVE, INC.

OUTDOOR LIGHTING

RATE SCHEDULE OL

AVAILABILITY:

Available throughout the entire territory served by the Cooperative in accordance with the Cooperative's Rules and Regulations for Electric Service.

CHARACTER OF SERVICE:

The Cooperative will install, operate and maintain the luminaire and related equipment. Electrical service will be supplied from dusk to dawn. Service is subject to Cooperative's Rules and Regulations for Electric Service.

MONTHLY RATE:

Standard Area/Street Light Energy Charge \$3.15 per light Equipment Charge \$7.10 per light

Larger than Standard Area/Street Light* Energy Charge \$5.08 per light Equipment Charge \$10.67 per light

INSTALLATION CHARGES:

Applicable installation charges shall be in accordance with Cooperative's Schedule of Fees and Charges.

CONDITIONS OF SERVICE:

The Cooperative shall maintain the lighting equipment in accordance with the Cooperative's Rules and Regulations for Electric Service.

TAX ADJUSTMENTS:

Amount computed at the above monthly rate, as adjusted by application of the monthly Wholesale Power Cost Adjustment, shall be subject to any applicable taxes, assessments, fees, and/or surcharges legally imposed by any governmental authority. The Florida Gross Receipts Tax on electric utility service shall be separately stated in full on all bills.

(Continued on Sheet No. 12.11)

Issued by: Tracy A. Bensley

General Manager

^{*}For existing lights only. No new lights of this type shall be installed.

(Continued from Sheet No. 12.01)

TERMS OF PAYMENT:

The above rates are net, gross rates being five percent (5%) higher not to exceed net plus \$10.00. Gross rates apply if current monthly bill is not paid by due date shown on bill.

Neither rates nor bills shall be discounted, except as specifically provided in this or other rate schedules. Bills rendered hereunder are payable, in cash, within the time limit specified on the bill, at Cooperative designated locations.

SPECIAL PROVISIONS:

Outdoor lighting service to street lighting districts designated by the Cooperative.

- Outdoor lighting service to Cooperative designated street lighting districts for municipal, county, or small town areas.
 - A. The monthly charge shall be the security light rate as established herein multiplied by the number of lights installed.
 - B. Installation charges shall be in accordance with the Cooperative's Rules and Regulations for Electric Service.
- 2. Outdoor lighting service to Cooperative designated street lighting districts for residential subdivisions:
 - A. The monthly charge shall be \$2.00 per residence within the boundaries of the subdivision.
 - B. The installation charge shall be in accordance with the Cooperative's Rules and Regulations for Electric Service.

To be added to monthly rate of each filed rate schedule in which reference is made to this schedule.

CALCULATION:

All energy charges shall be increased or decreased by 1/10 mill (\$0.0001) per kilowatt hour for each 1/10 mill or major fraction thereof, by which the average wholesale purchased power cost per kilowatt hour sold for the preceding month exceeds or is less than 80.78 mills (\$0.08078).

The level of this adjustment for billing purposes may be established at the option of management from historical and/or projected trends. The total bill adjustment for each fiscal year shall as nearly as possible equal the actual cost of power sold adjustment for the same fiscal year computed from actual operating data. Any over or under collection of wholesale power cost adjustment for a fiscal year shall be returned or recovered in the subsequent fiscal year's wholesale power cost adjustments.

Over 1,000 KWH \$0.1211 per KWH

Effective: September 1, 20134

WHOLESALE POWER COST ADJUSTMENT:

Monthly energy rate is subject to adjustment according to the Wholesale Power Cost Adjustment Schedule PCA.

(Continued on Sheet 9.1)

Issued by: John D. Hewa Tracy A. Bensley

GENERAL SERVICE DEMAND

RATE SCHEDULE GSD

AVAILABILITY:

Availability throughout the entire territory served by the Cooperative in accordance with the Cooperative's Rules and Regulations for Electric Service.

APPLICABLE:

To any electric service, other than residential, for light and power purposes where the measured monthly KW demand is 50 KW or more and not specifically served under another rate.

CHARACTER OF SERVICE:

Single phase or three phase, 60 Hertz, at one available standard voltage, at a single point of delivery.

CONDITIONS OF SERVICE:

Resale of service or standby service not permitted hereunder. Service is subject to Cooperative's Rules and Regulations for Electric Service. Three phase service may be limited to areas near the Cooperative's three phase lines.

MONTHLY RATE:

Facilities Charge \$65.00

Demand Charge

Billing Demand in excess of 20 KW \$7.25 per KW

Energy Charge \$0.0725\$0.0855 per KWH

WHOLESALE POWER COST ADJUSTMENT:

Monthly energy rate is subject to adjustment according to the Wholesale Power Cost Adjustment Schedule PCA.

(Continued on Sheet No. 10.1)

Issued by: John D. HewaTracy A. Bensley Effective: September 1, 20131

Effective: April September 1, 20082013

TALQUIN ELECTRIC COOPERATIVE, INC.

WHOLESALE

POWER COST ADJUSTMENT

SCHEDULE PCA

APPLICABILITY:

To be added to monthly rate of each filed rate schedule in which reference is made to this schedule.

CALCULATION:

All energy charges shall be increased or decreased by 1/10 mill (\$0.0001) per kilowatt hour for each 1/10 mill or major fraction thereof, by which the average wholesale purchased power cost per kilowatt hour sold for the preceding month exceeds or is less than $67.78 \times 80.78 = 80.78 \times 10^{-10}$ mills (\$0.067788078).

The level of this adjustment for billing purposes may be established at the option of management from historical and/or projected trends. The total bill adjustment for each fiscal year shall as nearly as possible equal the actual cost of power sold adjustment for the same fiscal year computed from actual operating data. Any over or under collection of wholesale power cost adjustment for a fiscal year shall be returned or recovered in the subsequent fiscal year's wholesale power cost adjustments.

Issued by: John D. HewaTracy A. Bensley

OUTDOOR LIGHTING

RATE SCHEDULE OL

AVAILABILITY:

Available throughout the entire territory served by the Cooperative in accordance with the Cooperative's Rules and Regulations for Electric Service.

CHARACTER OF SERVICE:

The Cooperative will install, operate and maintain the luminaire and related equipment. Electrical service will be supplied from dusk to dawn. Service is subject to Cooperative's Rules and Regulations for Electric Service.

MONTHLY RATE:

Standard Area/Street Light Energy Charge \$3.15 per light

Equipment Charge \$5.85\(\frac{\$5.85\(\frac{\$7.10}{2}\)}{2}\) per light

Larger than Standard Area/Street Light* Energy Charge \$5.08 per light

Equipment Charge \$9.42\$10.67 per light

INSTALLATION CHARGES:

Applicable installation charges shall be in accordance with Cooperative's Schedule of Fees and Charges.

CONDITIONS OF SERVICE:

The Cooperative shall maintain the lighting equipment in accordance with the Cooperative's Rules and Regulations for Electric Service.

TAX ADJUSTMENTS:

Amount computed at the above monthly rate, as adjusted by application of the monthly Wholesale Power Cost Adjustment, shall be subject to any applicable taxes, assessments, fees, and/or surcharges legally imposed by any governmental authority. The Florida Gross Receipts Tax on electric utility service shall be separately stated in full on all bills.

(Continued on Sheet No. 12.11)

Issued by: John D. Hewa Tracy A. Bensley Effective: September 1, 20113

^{*}For existing lights only. No new lights of this type shall be installed.

(Continued from Sheet No. 12.01)

TERMS OF PAYMENT:

The above rates are net, gross rates being five percent (5%) higher not to exceed net plus \$10.00. Gross rates apply if current monthly bill is not paid by due date shown on bill.

Neither rates nor bills shall be discounted, except as specifically provided in this or other rate schedules. Bills rendered hereunder are payable, in cash, within the time limit specified on the bill, at Cooperative designated locations.

SPECIAL PROVISIONS:

Outdoor lighting service to street lighting districts designated by the Cooperative.

- Outdoor lighting service to Cooperative designated street lighting districts for municipal, county, or small town areas.
 - A. The monthly charge shall be the security light rate as established herein multiplied by the number of lights installed.
 - B. Installation charges shall be in accordance with the Cooperative's Rules and Regulations for Electric Service.
- Outdoor lighting service to Cooperative designated street lighting districts for residential subdivisions:
 - A. The monthly charge shall be \$1.75\\$2.00 per residence within the boundaries of the subdivision.
 - B. The installation charge shall be in accordance with the Cooperative's Rules and Regulations for Electric Service.

Issued by: John D. Hewa Tracy A. Bensley Effective: September 1, 20113
