**Subject:** RE. Docket #20200226-SU

My name is Gary Galloway and my wife and I live at 180 South Gulf Blvd, Don Pedro Island. My wife Judy and I are asking the PSC to **DENY** Environmental Utilities, LLC application for service to our barrier island. We were unable to attend the PSC meeting in February due to a medical emergency, so when I received a copy of the rate case overview, I was astounded at the answers put forth by Environmental Utilities, LLC.

Judy and I did **NOT** request this sewer service and to my knowledge, we still have not seen any proven need for service. So, I ask, where is this coming from? After several conversations I've had with some of those who have spoken with Mr. Boyer, I believe he has no intention of building a sewer system as he has stated: "at his age". Those who have talked to Mr. Boyer believe his intention is to make money by selling the original certificate.

Furthermore, where is the data for the NEED of this service? The actual biological and scientific data has yet to be provided by Environmental Utilities.

In conjunction with this application, where is the data that Environmental Utilities has the financial ability to provide this service? Where is the data that Environmental Utilities has the expertise to install this system? Have they installed and operated sewer systems before? To my knowledge, a resounding **NO** is the answer.

I ask the commissioners would they hire someone to build a bridge, or freeway without any experience or financial wherewithal? That's what is being asked of us as island residents in regards to Environmental Utilities.

As for the cost, we will be required to pay for installation and then the monthly service fee. I was shocked with the cost information provided by Environmental Utilities, LLC if they are granted this certificate and IF they proceed with this installation. As a retired veteran and teacher, we live on a fixed income and these chargers are terrible and outrageous and do not compare to other sewer systems nearby. When we moved here 6 years ago, we thought it was the perfect place for us. But now our island paradise is threatened with unneeded disruption, damage to our property, and the natural habitat of gopher tortoises and other island creatures.

Again, Judy and I strongly urge the PSC to **deny this application** from Environmental Utilities, LLC.

Gary and Judy Galloway

**From:** Laurie Gaines <laurie@littlegasparilla.com>  
**Sent:** Tuesday, March 15, 2022 1:32 AM  
**To:** Office of Commissioner Clark  
**Subject:** Docket 20200226-SU

My name is Laurie Gaines and I am a resident at 8814 Grand Avenue, Little Gasparilla Island. My husband and I have concerns about the proposed sewer system application by EU and would like to formally request that the application be denied. We feel that more thought needs to go into the type of system to be proposed. The current proposed system seems to require electricity to work (unlike a high pressure system) and we lose power frequently on the island. It will tear up our yards and landscaping and wreak havoc on our quiet little island. And apparently the system will still need pumping every five years or so! (Due to our boat-only access, currently pumping costs about \$1500....and you can be on a waiting list for up to 6 months to get septic systems pumped. THAT should be more of a cause for concern by the County and I wish they would address that issue rather than just create a mandate that we need to install a system that is going to require even more frequent service.)

Our main concern stems from several aspects of the proposal:

1. the damage that will be caused to the ambiance of our island by the implementation of infrastructure at each and every home. Even more concerning is the potential for a major leak or spill when removing sewage from the island. The potential for a major leak, spilling thousands of gallons of raw sewage into Placida Bay, seems to be much more likely than the impact of a few leaking septic systems. ( I have lived on the island for over 35 years and can count on one had the time I have actually witnessed a septic tank overflow or leak.) Most are well maintained by residents and many are brand new systems installed within the last 5-6 years.
2. I also think it is unfair to ask homeowners to foot the bill for such a system without any option for financing. If the county feels it is necessary, Charlotte County should provide the service and pay for it with increased taxes over time....to hit each homeowner on the island with an enormous bill for a system they don't want or need is simply unfair. Many older residents may lose their homes. In addition, we are already paying EU an unusually high rate for our water....now we are going to be charged another unfairly high rate for sewer service we neither need nor want.
3. Our island lifestyle is unique and rare. We do not want the type of infrastructure that will encourage high-rises and more condo developments to come in and change our way of life forever. We like the island just the way it is.
4. The company proposing the system has not provided detailed costs and has not provided any sort of bid for a system. To just award a contract to an unproven contractor who "thinks" he can provide wastewater treatment seems reckless. I would feel more confident with a firm that has done something like this in the past rather than an unknown entity who cannot even provide financial details.

All in all, it seems that this request for a permit is premature, there is much more information that needs to be provided, both about how the system is going to be maintained, what will be done in the event of a major storm, how are major sewage spills going to be prevented, what is the company's experience in this area and what are the actual costs going to be?

Thank you in advance for considering my request.

**Subject:** Docket #20200226-SU

### Commissioner Clark

Charlotte County is shirking its responsibility to us taxpayers and should be the one getting professional bids and installing a proper system.

### ***EU has no experience in installing or maintaining a sewer system.***

We have no need for EU's suggested, in my words, installation of "another septic holding tank with a pump" and all at our expense. The Island loses electricity easily; the pump will not work.

A VACUUM system would be best with no homeowner, if any, maintenance costs.

Little Gasparilla is NOT a "rich" island like Boca Grande, and the financial hardship of not having the ability to spread the cost on our tax bill over 20 years is impossible for many longtime homeowners.

Islander's came together 10 years ago to map out our vision for our island and that Plan was accepted by Charlotte County. Of utmost importance was our zoning "down sizing" to BBI and single family homes only. This must NOT be changed, yet a County Commissioner has voiced his opinion that "it could be changed". Sewers bring population growth with them.

Take a look at the facts and vote against giving EU the Certificate of Service.

**Sincerely,**

**Marjorie and Charles O'Hara**

**From:** Tri Dang <trindang@yahoo.com>  
**Sent:** Monday, March 14, 2022 9:28 PM  
**To:** Office of Commissioner Clark  
**Subject:** RE. Docket #20200226-SU

Dear Commissioner Clark:

My name is Tri Dang. my wife (Jennifer) and I own a lot on Palm Island in Placida, Florida, where we plan to build our retirement home within the next few years. For the past sixteen months, homeowners including us on the Island are very concerned about issues with the proposed centralized waste collection services put forth by Mr. Jack Boyer, owner of the Environmental Utilities (EU) LLC. While we could not be there in person to support the Palm Island Estates (PIE) community, I was able to keep up-to-date with the ongoing issues. I am formally requesting that you and other commissioners **DENY** EU's application for wastewater services for the following reasons:

1) **Unreasonable high costs:** After several revisions, EU proposed cost to connect each unit on the Island to the "centralized collection service," which is estimated to be \$13,221, plus monthly charges of \$178.78. These cost estimates are way too high for individual households and will mostly likely be higher depending on the number of occupancies. In addition to these costs, homeowners are responsible for installing and maintaining other services such as pumps.

2) **Lack of experiences in operating a project of this scope:** I reviewed Mr. Boyer's biography and I appreciate his services to the country; however, if you compare his wastewater experience on a submarine and that of running a wastewater collection business providing services on a barrier island - something must have overlooked. If anything goes awry on a submarine, you will always have the backing of the Department of the Navy, Department of Defense, and lastly that of the US Government to address issues. If anything goes awry with wastewater on Palm Island, will EU be that single point of contact to address and remediate all issues? It does not appear that way based on Mr. Boyer's deposition. I am afraid that it will be the people on Palm Island who will bear the cost to address those issues. In my opinion, this proposal does not have the support of potential customers – more specifically the homeowners on the Island.

3) **Ability to participate or opt-out:** According to Mr. Boyer, one of the benefits that EU provides is to create and maintain an environmental-friendly system, where sewage water is collected, transferred, and treated off-island. This approach will prevent wastewater spillage on the barrier island that contaminate and cause damage to sea life. EU's proposed to replace existing concrete tanks with new tanks that made of composite material. These nouveau ideas are unproven as composite materials are not known to withstand the harsh conditions of salt water. According to concrete experts, the best material for sea water is concrete with reinforced steel though even these materials require periodic inspections to address performance degradation. EU's proposal requires full participation with one- or two-year phased in. This is the United States of America and thus, I believe that we have the right to not be forced to accept a high cost, unknown quality of service solution. We, the people on the Island, can address the issue through enforcement and due diligence maintenance of our septic tanks according to the County Health Department guidelines.

Again, I respectfully request that you and other commissioners **DENY** EU's application for wastewater services to Palm Island. It is absolutely the wrong proposal, the wrong team, and the wrong approach.

Please submit your comments to the docket.

Sincerely yours,

Tri Dang

**Subject:** Docket #20200226-SU

Thank you for allowing us to comment on this EU.

I am a full time resident on Don Pedro Island (420 Bocilla Drive) and strongly oppose the EU's application for wastewater services.

Beyond the obvious ( the applicant has NO EXPERIENCE in WASTE WATER and his background includes a number of legal infractions) , my personal moment of AWWWWW, is when I review the data presented on Need for service. The science is flawed at basic levels. The data is not from the immediate area surrounding our island. We as a community have 10 years of bacteriological data from annual sampling that does not show a "NEED".

The other AWWWWW moment is Fair and Equitable Rates and Charges. The applicant has not provided the residents with any level of detail as to the costs we will be forced to incur. Uncertain hook up charges, added expense for infrastructure, generators, landscaping and an additions \$200 to \$300 monthly added to our already high utility bills!

This entire process is an insult to all of us. No research, no engineering, no competitive bids. Our island is also a very fragile environment for which there have been no impact studies done.

I personally am not opposed to a sewage system. I am opposed to this applicant and the absolute lack of research and engineering .

The stakes are huge and the odds of success are slim if this path is chosen.

Please make the right choice , which is not the easy choice.

Respectfully

Jim Luscombe

Commissioner Clark,

Please approve the proposal to provide central sewers to our Barrier Islands. Doing so, will have a great positive impact to these Islands and the surrounding area.

Thank You

**From:** Jenny Dang <jenny\_n\_dang@yahoo.com>  
**Sent:** Monday, March 14, 2022 7:25 PM  
**To:** Office of Commissioner Clark  
**Subject:** Comment on Docket Number 20200226-SU

Dear Commissioner Clark:

My name is Jennifer Dang, and my husband (Tri) and I are property owners on Palm Island in Placida, Florida. Tri will submit his comment separately from his perspective.

I respectfully request that you **DENY EU's application for wastewater service** due to the following reasons, which in my humble opinion, are purely common sense.

1) I honestly don't believe that there is a proven need for EU's proposed wastewater service on the Island. Currently, we live in rural Virginia, and our house has not only a well but also a septic system. My parents' house in Georgia also uses a septic system for decades. **If enforced and maintained appropriately, septic systems are very efficient and safe to the environment.** I am engineer, and I do like to tinker with things. However, there are times when I have to remind myself of the old saying **"If it's not broken, don't fix it."** **This situation that the EU, you and other commissioners are dealing with now is just as that - especially when folks on the Island are opposing to the EU proposal.**

2) The majority of owners on our island do not request this proposed service from the EU.

3) Given the information (or lack of) provided by the EU, I don't believe that there are technical expertise and sufficient finances to support this project. In the end, the issues and costs overrun will be astronomical and passed on to the homeowners on the Island.

4) Since the County is not responsible for this project (so to speak), the homeowners on the Island will have no control over unknown rates after installation as well as future rate increases over the years.

5) Finally and most importantly, the proposed system and service are, in my opinion, no better than what homeowners have currently. At least, the costs of maintaining existing septic systems are manageable and known to homeowners.

Now from a personal perspective, I would like to make a few statements. My husband and I are in the process of planning for the construction of our retirement (forever) home on the lot that we purchased on the Island in 2013. We'll be living full time on the Island in a few years and cannot wait when that time comes. We both grew up in a communist regime when we were little. We have been living in the States for over 40 years now. Freedom means more to us than probably most folks because we know what it was like not to have it. Although we don't currently live on the Island, we have been following this proposal from the beginning as the outcome of this proposal will affect our daily lives when we become full time residence in a few years. **My whole issue with this proposal is that when the majority of homeowners oppose to this proposal from the EU, why force it down our throat?** While I understand that you and other commissioners have to follow the notice and comment process and do your due diligence, you have to take into consideration the needs and wants of the people on the Island. We cannot be forced to do something that we strongly oppose just because someone believes that their proposal is better and good for the environment. You have to consider the long-term financial impact to the homeowners not to mention the potential issues with the proposed systems. **Please ask yourself this question, if you were the homeowner, what would you do and do you think that it's appropriate to allow someone (like the EU) continually forcing something on people that will have significant negative, long-lasting effects on people's lives? To me, this is Un-American. Personally, this is something that people only**

**see in third-world countries or what my husband and I used to experience in a communist regime -- where we didn't have a say into our daily lives.**

**To close, while the aforementioned statements might be considered too harsh, I hope that it is time we bring an end to this agony and again respectfully request that you and other commissioners settle this matter once for all ---- that FREEDOM to choose from the homeowners on the Island prevail. I thank you in advance for your consideration.**

Respectfully yours,

Jennifer Dang
