In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S NINTH SET OF DATA REQUESTS

1. Please refer to Florida Public Utilities Company's (FPUC or Company) Minimum Filing Requirements (MFRs), Schedule D-1a and Schedule D1-a (Supplement) for the 2025 projected test year, Column K, labeled "Interest Expense," for the following requests:

   a) In Schedule D-1a, please explain why the total interest expense does not equal the sum of the above components in the column.

   b) In Schedule D-1a and Schedule D1-a (Supplement), please explain why both interest expenses associated with long term debt are equal despite having different long term debt cost rates.

   c) In Schedule D-1a and Schedule D1-a (Supplement), please provide the interest calculations under Column K for long term debt, short term debt, customer deposits, and the total interest expense.

Company Response:

a. **The amounts in column K were hard coded from the last rate case filing and not changed to a formula. Please refer to the attached file for correction of the filing. The filed revenue requirement is overstated by $732,820. Please refer to the attached DR 9.1a and b.**

b. Please refer to DR 9.1a above.

c. Please refer to DR 9.1a above.

2. Please refer to Direct Testimony of FPUC witness Michelle Napier, page 18, lines 3 through 9, for the following requests:

a) Please provide a citation for where the interest and income tax synchronization adjustment and its calculation can be found within the MFRs and electronic MFRs.

b) Please provide a step-by-step breakdown of the calculation used to achieve the $5,950 interest synchronization adjustment.

Company Response:

a. The interest synchronization formulas are in the Excel version of the MFR's on the C-1 (2023), (2024), and 2025 file on line 54 columns F-I. On the schedules, after the interest synchronization adjustments are made, the amount needed should come to zero. There may be $1.00 shown due to rounding.

b. Please refer to file DR 9.2b Interest Sync Calculation for the formulas.

3. Please provide details on the estimated additional project cost of $587,280 for the General Ledger System CWIP that can be found on MFR Schedule B-13, page 2 of 2.

Company Response:

This amount was based on a very early estimate of the ERP project costing $29,504,881 before the full extent of the project was determined. This amount was allocated at 6% to electric when this early estimate was made. As discussed in the response to Staff's Data Request 8 number 5, the ERP estimate is not complete. In addition, the amount in construction work in process was removed from rate base on MFR B-1 because it

included an allowance for funds used during construction in the estimate. Therefore, it is not included in the calculation of base rates.

FLORIDA PUBLIC SERVICE COMMISSION

EXPLANATION: Provide the company's 13-month average cost of capital for the test year, the prior year, and historical base year.

FPUC’s Response to Staff’s Tenth Data Request (Nos. 1-5)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TENTH SET OF DATA REQUESTS

1.) Please complete the below table, which details the total number of complaints by type and year that were received by FPUC from January 2020 through October of 2024.

	Type of Complaints	
	Quality of Service	Billing Issues
2020		
2021		
2022		
2023		
2024 (January – October)		
Total		

Company Response:

	Type of Complaints	
	Quality of Service	Billing Issues
2020	7	4
2021	7	21
2022	8	20
2023	8	22
2024 (January – October)	6	24
Total	36	91

2.) Please refer to the direct testimony of witness Estrada for the following questions:

a. Please refer to page 6, lines 1 through 4. Please identify and explain the specific improvements in timing and accuracy of billing through the new Customer Information System (NCIS).

b. Please refer to page 6, lines 4 through 7. Witness Estrada identifies potential future enhancements such as a customer portal and preference management. What are the anticipated in-service dates for these identified enhancements? If there are none, please explain why.

c. Please refer to page 9, lines 1 through 3. Please explain how FPUC currently communicates with communities where fieldwork is to be performed.

Company Response:

a. The new CIS included an automated process for the billing and invoicing processes. For example, meter reads are now automatically reviewed upon entry, allowing the system to identify outliers such as unexpectedly high or low readings, and if necessary, create an exception. This exception process offers improved accuracy in billing as there will be manual intervention for review and adjustments, only if needed. Another improvement in the automation for billing and invoicing is that it reduces manual processing time, allowing bills to be prepared and ready for issuance more quickly than before. This process also has an exception process where the system will detect missing or unusual data that can be reviewed and adjusted, if necessary, prior to being released to the customer.

b. The expected in-service date for the customer self-service portal, and core notification and preference management functionality, is the end of 2025. In addition to the core notification and preference management functionality, a future enhancement of that core notification will include optional outbound communications (i.e. SMS, emails, etc.).

c. Currently, appointments for customer-requested field work are confirmed with the customer at the time of request. If a customer should miss an appointment, a door hanger is left and a follow-up call is made for rescheduling. For most company-planned work, a door hanger is placed at the customer's premises advising of the planned work. A future

enhancement of the notification and preference management system will include optional outbound communications (i.e. SMS, email, etc.) to customers about work at their location.

3.) Please refer to the direct testimony of witness Gadgil for the following questions:

a. Please refer to page 8, lines 17 through 19. Please elaborate on the "industry standards and regulations" stated here. Please explain how the new SAP solution will ensure compliance with these standards and regulations.

b. Please refer to page 9, line 5. Please provide the estimated implementation date for the NCIS.

c. Please refer to page 9, lines 13 through 14. Please elaborate on the "industry benchmarks" referenced on these lines. Further, please explain how FPUC determined the additional costs for the NCIS are consistent with those benchmarks.

d. Please refer to page 9, lines 18 through 19. Please explain in greater detail why FPUC believes that retaining the legacy platform would "lead to higher costs in the future."

e. Please refer to page 10, lines 12 through 14. Please elaborate on the "industry-standard platform" that FPUC is currently in the process of selecting. Please also state when FPUC anticipates making its selection.

Company Response:

a. SAP's platform is designed to address several critical security and compliance requirements. The key standards and regulations that are referenced are:

- **NIST Standards: The solution adheres to the foundational standards promulgated by the National Institute of Standards and Technology (NIST), which serve as the basis for industry models such as the industry C2M2 Capability Maturity Model. This alignment ensures robust data security, particularly in safeguarding sensitive information and enforcing stringent access controls. By complying with NIST standards, the solution upholds the core security pillars of confidentiality, integrity, and availability, thereby contributing to operational security and resilience.**
- **PCI-DSS Best Practices: While the Payment Card Industry Data Security Standard (PCI-DSS) is not required, the solution proactively incorporates its best practices to ensure the protection of customer payment information. This approach ensures adherence to the highest level of data protection, which is important for handling customer payments.**
- **SOX Compliance: To ensure financial integrity and reporting accuracy, the solution provides comprehensive audit trails and robust access controls in compliance with the Sarbanes-Oxley Act (SOX). These measures promote transparency and accountability in financial processes, which are essential for regulatory compliance and stakeholder trust.**
- **NERC CIP Compliance: Recognizing our role as an electric utility and the criticality of protecting vital infrastructure, the solution incorporates access controls, comprehensive logging, and robust auditing practices to safeguard both the physical and cyber aspects of our operations.**

To ensure ongoing compliance, the solution is equipped with built-in tools for data encryption, granular user access controls, comprehensive logging, detailed audit trails, and automated security updates. Furthermore, it supports automated reporting and audit capabilities, streamlining the process of adhering to relevant standards and regulations. Our commitment to continuous monitoring enables us to proactively identify and address any potential compliance deviations, ensuring that the highest standards of data protection and cybersecurity are consistently maintained.

b. The new CIS system went live on August 26, 2024, and, after a stabilization period, was capitalized October 1, 2024. Some additional costs are expected to occur and be closed by year end 2024.

c. To address obsolescence in our current Customer Information System (CIS) and meet evolving customer demands, Chesapeake embarked on a comprehensive technology upgrade project. Recognizing the complexity of this undertaking, we engaged leading industry analyst firms to ensure a cost-effective and robust solution.

In 2021, Ernest & Young (E&Y) conducted an initial assessment and developed a technology upgrade plan, benchmarking potential costs against their extensive experience with similar utility CIS upgrades. This provided a preliminary cost range and helped define the scope of the project.

In 2022, we partnered with TMG, a leading utility industry analyst firm, to guide platform selection and system integration. TMG's base model for estimation, along with their comprehensive database of over 5,000 CIS requirements, enabled a rigorous evaluation of potential vendors in the Billing, front office, back office area.

After a thorough RFP process that included SAP, Oracle, and other niche firms, SAP was selected based on fit regarding the requirements, total costs and overall long term fit.

Recognizing that systems integration is critical to the success of a CIS implementation and represents a significant portion of the project cost, we commissioned TMG to lead a separate RFP process for this component. Leading firms, including E&Y, Deloitte, IBM, and HCL, were evaluated on utility experience, methodology, quality of team and cost. To ensure cost competitiveness, vendor bids were compared against industry benchmarks and normalized costs for similar utility projects, with vendors providing valuable comparative data.

Ultimately, IBM was selected as the systems integrator based on multiple evaluation factors that included, cost, capabilities, and strength of implementation team. A detailed work statement was established to govern project execution and ensure alignment with Chesapeake's objectives.

d. Retaining the legacy platform would result in substantial and escalating costs over time.

The legacy system, developed in the 1990s, was built on an IBM AS/400 framework. However, it gradually evolved into a niche product, with minimal industry adoption and limited product development. This stagnation ultimately rendered the system obsolete, with its development entirely discontinued.

In light of today's demands on the electrical grid, our customers require access to secure, reliable, accurate, and readily available information. Unfortunately, the legacy system lacks native capabilities to meet these modern requirements. Any updates to meet such standards would require either extensive in-house development or the addition of third-party services, both of which present challenges and added costs.

Moreover, since the core system was built 30 years ago, finding qualified developers with legacy system expertise has become increasingly difficult and costly. The shrinking pool of available professionals with knowledge of these outdated technologies makes it challenging to locate developers who can effectively build, support, and maintain this environment. This limitation introduces dependency risks on a few remaining experts, further increasing operational costs and potentially jeopardizing system reliability.

Attempting to integrate the legacy system with third-party add-ons to deliver modern capabilities introduces multiple risks. Such integrations increase system complexity, administrative overhead, and cybersecurity vulnerabilities. Older systems, with unpatched codebases, are inherently more vulnerable to contemporary cyber threats. Additionally, linking these outdated systems—which lack foundational security protocols—to modern software or cloud-based services is complex and, in some instances, impossible due to the rigidity and constraints of the legacy infrastructure.

Maintaining this legacy system in its current state would also contribute to higher annual support costs, even without any feature upgrades. Hardware inevitably ages and will require replacement. The legacy applications, built decades ago, demand costly updates to remain compatible with newer hardware. This need for constant intervention not only drives up maintenance costs but also increases the frequency of necessary system outages, affecting overall service reliability and customer satisfaction.

e. This testimony refers to the recently implemented CIS system based on the industry standard SAP platform. Please refer to the response to 3b for the in-service date.

4.) Please refer to the direct testimony of witness Haffecke for the following questions:

a. Please refer to page 10, lines 17 through 19. Please provide the estimated total capital cost and O&M expenses for the NCIS. As part of this response, please provide an itemized breakdown of what is included in the cost estimate.

b. Please refer to page 15, lines 19 through 20. Please explain where the dispatcher and/or management are located.

c. Please refer to page 15, lines 22 through 23. Please provide the communication range for the two-way radio system.

d. Please refer to page 16, lines 7 through 8. Please provide the estimated implementation date for the two-way radio system.

e. Please refer to page 16, line 10. Please provide the estimated total O&M expenses for the two-way communication system. As part of this response, please provide an itemized breakdown of what is included in the cost estimate.

f. Please refer to page 18, line 10. Please provide the estimated total cost of the security cameras. As part of this response, please provide an itemized breakdown

of what is included in the cost estimate.

g. Please refer to page 18, lines 14 through 16. Please provide the estimated implementation date for the security cameras. As part of this response, please provide the number of substations and operation offices that would have security cameras installed along with the number of security cameras.

h. Please refer to page 20, lines 12 through 15 provide the estimated total O&M expenses associated with the security system service and plan monitoring. As part of this response, please provide a description of what the security system service and plan monitoring includes and an itemized breakdown of what is included in the cost estimate.

Company Response:

a. Please refer to the file DR10.4a - Estimated CIS Cost Calculation, for the detailed CIS

expenses of $356,083 O&M and $337,690 depreciation expense and file DR 10.4b - Estimated CIS Capital Cost, for the capital estimate of $6,912,623.

b. Dispatchers and Management are located at both Operations Centers (NE and NW).

c. We do not currently know the range. A propagation study is being performed in both divisions to determine the number of repeaters required so that there will be complete coverage of both areas.

d. It is estimated that the radio system will be fully implemented by December 31, 2024.

e. The costs related to the two-way radio system were capital costs to purchase the radios. Therefore, there are no O&M expenses related to the radio system.

f. Please refer to the attached file DR 10.4f - Estimated Camera Cost and Monitoring.

g. The installation of cameras will begin in November in Fernandina and then in Marianna and expect all to be completed by the end of 2024. There will be 27 total cameras as follows:

Fernandina Beach Operations Center will have 5 cameras.

The Eight Flags substation in NE FL will have 1 camera.

The JL Terry substation in NE Fl, the Daugherty substation in NE Fl, the Marianna Operations Center, the Chipola substation in NW Fl, the Altha substation in NW Fl, the Caverns substation in NW Fl, and the Marianna substation in NW Fl will all have 3 cameras each.

h. The capital estimates include multi-sensor and dual cameras, a control house at each location with card readers, electric strike, door contacts, request to exit motion, and headend equipment. There will be 30 days of Cloud storage and 30 days on-premises video retention for each site or 60 days of storage. The estimated operating and maintenance costs are outlined below for the security system service and security health monitoring at

each of the identified locations. These recurring monthly charges reflect a turn-key solution to the health and maintenance of our video management system to include parts and labor.

Security health monitoring (SHM) includes the remote monitoring of our security cameras, network video recorders, access control panels, and any IP based security system to include patch management and technical support 24/7. As many of these systems are outside the Chesapeake network, recurring monthly cellular costs based on internet connection access fees apply. Please refer to the attached file DR 10.4f - Estimated Camera Cost and Monitoring.

5.) Please refer to the direct testimony of witness Napier for the following questions:

a. Please refer to page 23, lines 12 through 13. Please provide FPUC projections for the account to be underfunded.

b. Please refer to page 23, lines 14 through 15. Please provide FPUC projections for the increase in the reserve and expenses.

c. Please refer to page 25, lines 20 through 21. Please provide an example of how the Technology Cost Recovery Rider (TCRR) will be used.

Company Response:

a. **Please refer to the attached file DR 10.5a - Storm Reserve Estimate.**
b. **Please refer to the response to a above.**
c. **Please refer to Staff's Data Request 8 number 1 and 5.**

1CX Annual Summary

	489	12,180	5,736	5,736	10,203	22,944	5,736	63,024

E850

Storm Reserve Estimate:

Balance at 12/23	983,558.00	
2024 Accrual	121,620.00	
Storm Cost Estimate 2024	(1,342,237.00)	Note A
Estimated Balance 12/24	(237,059.00)	
2025 Accrual	121,620.00	
Storm Cost Estimate 2025	(619,454.00)	Note B
Estimated Under-recovery 12/25	(734,893.00)	
Amount of reserve that should be maintained in the reserve per Order No. PSC-2019-0014-FOF-EI	1,500,000.00	
Total amount needed to get to the $1.5M	2,234,893.00	
Over 5 years	446,978.60	

Note A:

This is an estimate based on actual costs of $520,974 as of April 2024 which when annualized would have been $1,562,922, and the actual 2023 storm costs of $1,321,490. Storm costs in 2024 to date are $778,816.58 and we are still getting new storms. Because the 2023 storm season was projected to be extremely active, the Company used an amount close to the 2023 cost but less than the 2024 annualized amount.

Note B:

This is an estimate assuming a less active storm season. The amount was an average of actual 2020-2023 costs plus the estimated 2024 cost.

69

FPUC’s Response to Staff’s Eleventh Data Request (Nos. 1-12)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S ELEVENTH SET OF DATA REQUESTS

1. Please refer to Florida Public Utilities Company's (FPUC or Company) Responses to Staff's Fifth Set of Data Requests, response No. 3, for the following request. Please explain how the Company ensures that any work preformed by native FPUC staff is separated by retail/jurisdictional work versus rate case work that would be charged to rate case expense.

Company Response:

The Company does not staff at a level to allow for preparation of rate proceedings. Therefore, additional resources are necessary beyond our normal staffing levels in order to prepare rate cases and handle the extra work load. The Company utilized temporary internal staff, 100% dedicated to the Company's rate case cycles in progress, and have charged their time to each rate case appropriately. Expenses for staff working on regular compliance filings and accounting are allocated to O&M based on the MMM Distrigas. The Company has not charged any time related to regular normal work to rate case expense. To be clear, only expenses related to rate cases, which is above and beyond normal payroll levels, have been charged to the rate case, thereby eliminating the possibility of duplicating expense recovery. In addition, if the rate case personnel were not charging to rate case expense, the O&M costs recovered would be an increase over the current level of expense and passed through to our customers in base rates. Because this level is not expected to

continue, it is more appropriate to charge rate case expense and is ultimately an overall benefit for our ratepayers. Also, at the end of the rate case cycles, this staff may either work on another rate case or be reassigned to fill in vacancies on projects and open positions.

2. Please refer to the total of line 9 of Minimum Filing Requirements (MFR) Schedule C-7 (2023), page 1 of 4, and the total of line 9 of MFR Schedule C-7 (2024), page 1 of 6, for the following request. Please explain the factor(s) that lead to the increase in 2024 "Supervision and Engineering operating & maintenance" (O&M) expense over 2023.

Company Response:

As shown on MFR C-7, the amount is calculated as follows:

	Payroll	Non-Payroll	Total
2023 Actual Costs (C-7(2023) p 2)	**$327**	**$15,901**	**$16,228**
Less Depreciation Expense included in Depreciation in MFR (C-7 (2023) p 2)		**(45)**	**(45)**
Net Adjusted 2023	**$327**	**$15,856**	**$16,183**
Trend Factors	**1.0350**	**1.0284**	
Trended Projection 2024	**$338**	**$16,306**	**$16,644**
Over/Under Adj. from C-7 page 7-8	**0**	**$12,000**	**$12,000**
2024 Projected Year End	**$338**	**$28,306**	**$28,644**

Consistent with other rate case filings, the Company uses trend factors for revenue, customer growth, and inflation and combinations of those to forecast expenses for projected years. Those projected amounts are reviewed to determine if there are new costs that will be

occurring in the projected years which are over and above the factored amounts. The over and above adjustments for 2024 and 2025 have been provided on C-7 (2025) page 7 and 8. The trend factors are provided on MFR Schedule C-7 (2024) page 5. The factors used are in columns D & E of the C-7 schedule. The payroll factor represents the projected pay increases for the year and are discussed in company witness Devon Rudloff-Daffinson's testimony.

Support for the customer growth and inflation factors is provided in the attached file DR 11.1 Growth and Inflation budget. The projected inflation factors were provided by company witness Noah Russel and are included in his testimony.

The $12,000 over/under adjustment for this account is described on MFR C-7 (2024,2025) page 7 and is related to a transmission engineering study taking place in the first quarter of 2024. It is done once every five years and, therefore, not included in the 2023 expenses. Since it is performed every five years only $12,000 of the $60,000 cost was included as an increase over and above inflation and growth.

3. Please refer to the total of line 14 of MFR Schedule C-7 (2023), page 1 of 4, and the total of line 14 of MFR Schedule C-7 (2024), page 1 of 6, for the following request. Please explain the factor(s) that lead to the increase in 2024 "Operation Supervision & Eng" O&M expense over 2023.

Company Response:

As shown on MFR C-7, the amount is calculated as follows:

	Payroll	Non-Payroll	Total
2023 Actual Costs (C-7 (2023) p 2)	**$162,253**	**$83,637**	**$245,890**
Less Depreciation Expense included in Depreciation in (MFR (C-7(2023) p 2)		**(2,211)**	**(2,211)**
Net Adjusted 2023	**$162,253**	**$81,426**	**$243,679**
Trend Factors	**1.0350**	**1.0315**	
Trended Projection 2024	**$167,932**	**$83,989**	**$251,921**
Over/Under Adj. from C-7 page 7-8	**$81,843**	**$11,430**	**$93,273**
2024 Projected Year End	**$249,775**	**$95,419**	**$345,194**

Please refer to the response to Staff's Data Request 11 number 2 for support for the forecasting methodology and trend factors. For this account the payroll factor was used for payroll and the customer growth factor times inflation for the non-payroll amount.

The over/under adjustments for this 580 account are described on MFR C-7 (2024,2025) page 7 and are related to increased costs in the Supervisor of Engineering allocations due to an increase in operation vs. capital duties related to additional substation management, vegetation management, transmission/distribution relay modifications and monitoring feed

loading. Please refer to the attached file DR 11.3a GM450 allocation changes for additional support.

An additional adjustment was related to the increase in the Damage Prevention department costs due to an increase in damaged underground services and the need for the customers to be more aware about calling 811 before digging. Please refer to DR 11.3b MG119 allocation change.

4. Please refer to the total of line 15 of MFR Schedule C-7 (2023), page 1 of 4, and the total of line 15 of MFR Schedule C-7 (2024), page 1 of 6, for the following request. Please explain the factor(s) that lead to the increase in 2024 "Load dispatching" O&M expense over 2023.

Company Response:

As shown on MFR C-7, the amount is calculated as follows:

	Payroll	Non-Payroll	Total
2023 Actual Costs (C-7 (2023) p 2)	$15,499	$7,624	$23,123
Trend Factors	1.0381	1.0315	
Trended Projection 2024	$16,090	$7,864	$23,954
Over/Under Adj. from C-7 page 7-8	0	$26,280	$26,280
2024 Projected Year End	$16,090	$34,144	$50,234

The trend factors are provided on MFR Schedule C-7 (2024) page 5. The factors used are in columns D & E of the C-7 schedule. Please refer to the response to Staff's Data Request 11 number 2 for forecasting methodology and support for the trend factors. The factors used for this account were payroll times customer growth for payroll accounts and inflation times customer growth for non-payroll accounts.

As discussed in the response to Staff's Data Request 5.1, the $26,280 over/under adjustment for this account is described on MFR C-7 (2024,2025) page 7 and is related to an allocation of a subscription for S & P Global Platts, which is a subscription used to review and forecast costs in our purchase power agreements.

5. Please refer to the total of line 16 of MFR Schedule C-7 (2023), page 1 of 4, and the total of line 16 of MFR schedule C-7 (2024), page 1 of 6, for the following request. Please explain the factor(s) that lead to the increase in 2024 "Station Expenses" O&M expense over 2023.

Company Response:

As shown on MFR C-7, the amount is calculated as follows:

	Payroll	Non-Payroll	Total
2023 Actual Costs (C-7 (2023) p 2)	**$66,733**	**$18,878**	**$85,611**
Less Depreciation Expense included in Depreciation in MFR (C-7 (2023) p 2)		**(3,237)**	**(3,237)**
Net Adjusted 2023	**$66,733**	**$15,641**	**$82,374**
Trend Factors	**1.0381**	**1.0315**	
Trended Projection 2024	**$69,276**	**$16,134**	**$85,410**
Over/Under Adj. from C-7 page 7-8	**$76,960**	**$0**	**$76,960**
2024 Projected Year End	**$146,236**	**$16,134**	**$162,370**

The trend factors are provided on MFR Schedule C-7 (2024) page 5. The factors used are in columns D & E of the C-7 schedule. Please refer to the response to Staff's Data Request 11 number 2 for forecasting methodology and support for the trend factors. The factors used for this account were payroll times customer growth for payroll accounts and inflation times customer growth for non-payroll accounts.

The $76,960 over/under adjustment for this account is described on MFR C-7 (2024,2025) page 7 and is related to the annualization of the IMC Technician's salary in the NE region

E859

who was hired in September 2023 and, therefore not included for most of 2023. Support for this position was included in the file attached to Staff's Data Request 6, number 6 titled DR 6.6 IMC Technician NE.

6. Please refer to the total of line 16 of MFR Schedule C-7 (2024), page 1 of 4, and the total of line 16 of MFR Schedule C-7 (2025), page 1 of 8, for the following request. Please explain the factor(s) that lead to the increase in 2025 "Station Expenses" O&M expense over 2024.

Company Response:

As shown on MFR C-7, the amount is calculated as follows:

	Payroll	Non-Payroll	Total
2023 Actual Costs (C-7 (2023) p 2)	$66,733	$18,878	$85,611
Less Depreciation Expense included in Depreciation in MFR (C-7 (2023) p 2)		(3,237)	(3,237)
Net Adjusted 2023	$66,733	$15,641	$82,374
Trend Factors for 2 years 2024 and 2025	1.0778	1.0586	
Trended Projection 2025	$71,923	$16,558	$88,481
Over/Under Adj. from C-7 page 7-8	$200,545	$73,582	$274,127
2025 Projected Year End	$272,468	$90,140	$362,608

The trend factors are provided on MFR Schedule C-7 (2024) page 5. The factors used are in columns D & E of the C-7 schedule. Please refer to the response to Staff's Data Request 11 number 2 for forecasting methodology and support for the trend factors. The factors used for this account were payroll times customer growth for payroll accounts and inflation times

customer growth for non-payroll accounts.

The over/under adjustments for this account are described on MFR C-7 (2024,2025) page 7. The first is related to the annualization of the IMC Technician's salary in the NE region who was hired in September 2023 and, therefore not included for most of 2023. Support for this position was included in the file attached to Staff's Data Request 6, number 6 titled DR 6.6 IMC Technician NE.

The second relates to the salary for an IMC Technician in the NW Fl division in 2025 and additional equipment, supplies and annual maintenance costs. Support for these costs was included in the file attached to Staff's Data Request 6, number 6 titled DR 6.6 IMC Technician NW.

7. Please refer to the total of line 17 of MFR Schedule C-7 (2023), page 1 of 4, and the total of line 17 of MFR Schedule C-7 (2024), page 1 of 6, for the following request. Please explain the factor(s) that lead to the increase in 2024 "Operation of Overhead Lines" O&M expense over 2023.

Company Response:

As shown on MFR C-7, the amount is calculated as follows:

	Payroll	Non-Payroll	Total
2023 Actual Costs (C-7 (2023) p 2)	**$32,009**	**$10,850**	**$42,859**
Less Depreciation Expense included in Depreciation in MFR (C-7 (2023) p 2)		**(1,069)**	**(1,069)**
Net Adjusted 2023	**$32,009**	**$9,782**	**$41,790**
Trend Factors	**1.0381**	**1.0315**	
Trended Projection 2024	**$33,228**	**$10,090**	**$43,318**
Over/Under Adj. from C-7 page 7-8	**0**	**$70,000**	**$70,000**
2024 Projected Year End	**$33,228**	**$80,090**	**$113,318**

The trend factors are provided on MFR Schedule C-7 (2024) page 5. The factors used are in columns D & E of the C-7 schedule. Please refer to the response to Staff's Data Request 11 number 2 for forecasting methodology and support for the trend factors. The factors used for this account were payroll times customer growth for payroll accounts and inflation times customer growth for non-payroll accounts.

The $70,000 over/under adjustment for this account is described on MFR C-7 (2024,2025) page 7 and is related to joint use pole inspections that will begin in the 4th quarter of 2024 and occur annually and are not in Storm Protection Plan cost recovery.

8. Please refer to the total of line 25 of MFR Schedule C-7 (2023), page 1 of 4, and the total of line 25 of MFR Schedule C-7 (2024), page 1 of 6, for the following request. Please explain the factor(s) that lead to the increase in 2024 "Distribution Expenses" O&M expense over 2023.

Company Response:

As shown on MFR C-7, the amount is calculated as follows:

	Payroll	Non-Payroll	Total
2023 Actual Costs (C-7 (2023) p 2)	**$192,138**	**$33,770**	**$225,908**
Less Depreciation Expense included in Depreciation in MFR (C-7 (2023) p 2		**(1,805)**	**(1,805)**
Net Adjusted 2023	**$192,138**	**$31,965**	**$224,103**
Trend Factors	**1.0381**	**1.0315**	
Trended Projection 2024	**$199,459**	**$32,971**	**$232,431**
Over/Under Adj. from C-7 page 7-8	**$9,473**	**0**	**$9,473**
2024 Projected Year End	**$208,932**	**$32,971**	**$241,903**

The trend factors are provided on MFR Schedule C-7 (2024) page 5. The factors used are in columns D & E of the C-7 schedule. Please refer to the response to Staff's Data Request 11 number 2 for forecasting methodology and support for the trend factors. The factors used for this account were payroll times customer growth for payroll accounts and inflation times customer growth for non-payroll accounts.

The $9,473 over/under adjustment for this account is described on MFR C-7 (2024,2025) page 7 and is related to a portion of a person's salary that was capitalized in 2023 to assist

with implementation of the new customer information system but is now performing operation and maintenance duties using the new field service management system within the new CIS system. Because the salary was not in 2023, the costs are over and above 2023 inflated for growth and inflation. Please refer to the file DR 11.8 EN403 change in duties for additional support.

9. Please refer to the total of line 25 of MFR Schedule C-7 (2024), page 1 of 4, and the total of line 25 of MFR Schedule C-7 (2025), page 1 of 8, for the following request. Please explain the factor(s) that lead to the increase in 2025 "Distribution Expenses" O&M expense over 2024.

Company Response:

As shown on MFR C-7, the amount is calculated as follows:

	Payroll	Non-Payroll	Total
2023 Actual Costs (C-7 (2023) p 2)	$192,138	$33,770	$225,908
Less Depreciation Expense included in Depreciation in MFR (C-7 (2023) p 2		(1,805)	(1,805)
Net Adjusted 2023	$192,138	$31,965	$224,103
Trend Factors for 2 years 2024 and 2025	1.0778	1.0586	
Trended Projection 2025 (rounding involved)	$207,081	$33,838	$240,918
Over/Under Adj. from C-7 page 7-8	$29,412	0	$29,412
2025 Projected Year End (rounding)	$236,493	$33,838	$270,330

The trend factors are provided on MFR Schedule C-7 (2024) page 5. The factors used are in

E864

columns D & E of the C-7 schedule. Please refer to the response to Staff's Data Request 11 number 2 for forecasting methodology and support for the trend factors. The factors used for this account were payroll times customer growth for payroll accounts and inflation times customer growth for non-payroll accounts.

The $29,412 over/under adjustment for this account is described on MFR C-7 (2024, 2025) page 7 and is related to a portion of a person's salary that was capitalized in 2023 to assist with implementation of the new customer information system but is now performing operation and maintenance duties using the new field service management system. Because the salary was not in 2023, the costs are over and above 2023 inflated for growth and inflation. Please refer to the file DR 11.8 EN403 change in duties for additional support.

E865

10. Please refer to the total of line 24 of MFR Schedule C-7 (2023), page 1 of 4, and the total of line 24 of MFR Schedule C-7 (2024), page 1 of 6, for the following request. Please explain the factor(s) that lead to the increase in 2024 “Misc Distribution O&M” expense over 2023.

Company Response:

There were no costs included on line 24 in either C-7 (2023) or C-7 (2024).

11. Please refer to the total of line 24 of MFR Schedule C-7 (2024), page 1 of 4, and the total of line 24 of MFR Schedule C-7 (2025), page 1 of 8, for the following request. Please explain the factor(s) that lead to the increase in 2025 “Misc Distribution” O&M expense over 2024.

Company Response:

There were no costs included on line 24 in either C-7 (2024) or C-7 (2025).

12. Please refer to MFR Schedule C-35, page 1 of 1, for the following requests.

a) Please refer to line 9. Please explain the factor(s) that lead to the increase in 2023 "Medical Insurance" benefit amount.

b) Please refer to line 14. Please explain the factor(s) that lead to the increase in 2024 "Worker's Compensation" benefit amount.

c) Please refer to line 16. Please explain the factor(s) that lead to the increase in 2025 "401K" benefit amount.

d) Please refer to line 18. Please explain the factor(s) that lead to the decrease in 2023 "Relocation Expenses".

e) Please refer to line 19. Please explain the factor(s) that lead to the decrease in 2023 "Retiree Benefits".

f) Please refer to line 20. Please explain the factor(s) that lead to the increase in 2023 "Other health-related benefits".

g) Please refer to line 20. Please explain the factor(s) that lead to the decrease in 2024 and 2025 "Other health-related benefits".

h) Please refer to line 21. Please explain the factor(s) that lead to the increase in 2023 "Other benefits" over 2022 and the decrease in 2024 "Other benefits" over 2023.

i) Please refer to line 21. Please detail and explain what costs are being recorded to "other benefits" for the 2023, 2024, and 2025 test years.

Company Response:

MFR Schedule C-35 is based on total Chesapeake costs and budgets, consistent with our last filing. Costs included in MFR C-7, which are used for the revenue requirement are based on trending for payroll increases, customer growth, and/or inflation. In addition, known

changes were included in the over/under adjustments detailed on MFR C-7 (2024, 2025) page 7 and 8. An additional schedule providing information related to only the electric division is also attached as DR 1.12 C-35 Electric.

However, the following responses relate to your questions on MFR Schedule C-35:

a. **Chesapeake is self-insured. Overall claims for employees and their dependents participating in Chesapeake's health care plans increased in 2023.**
b. **Workers' compensation expense reflect exposure for all claims for that given moment. The total claim volume fluctuates monthly as does the exposure based on medical bills, property damage and bodily injury settlements. The workmen's comp insurance amount in 2023 includes a reduction to adjust for prior years' claims dating back to 2021. The 2024 and 2025 budgeted amounts were forecasted for projected claims and does not include any forecasted reductions related to prior year claims.**
c. **The 2025 total corporate costs on this MFR were based on $7,180.68 per employee times the 1,335 employees. The 2024 amount was calculated based on $6,641.80 per employee.**
d. **Relocation expense is based on the number of new employees hired that qualify and meet the criteria to receive a relocation reimbursement as well as their salary level. In 2022, four employees received relocation reimbursement and in 2023, six employees received reimbursement. 2022 relocation expense is higher with slightly fewer employees because one of the employees was an executive which qualified for a higher amount of reimbursement.**
e. **Retiree benefits decreased from 2022 to 2023 as a person passed away and that person's benefit ended.**

f. **Factors contributing to the increase in other health-related benefits are health care savings contributions, accidental death & dismemberment insurance, and long-term and short-term disability insurance.**

g. **The amounts that increased 2023's expenses discussed in question 12f, were not all forecast forward for 2024 and 2025.**

h. **Other benefits for 2023 increased due to a new employee recognition platform named "Gratitude" which allows employees to express appreciation for each other which creates a positive work culture. The recipient of the gratitude gets to choose a reward. There was also a slight increase in car allowances and retirement gifts. The projections for 2024 did not include a forecast for all of these costs. For the amounts included, please refer to the response to question 12i.**

i. **Service awards, gratitude awards, safety awards, retirement gifts, and car allowances are included in other benefits.**

O & M COMPOUND MULTIPLIER CALCULATION

2024 Restructure of Supervisor of Engineering (GM450) departmental duties resulting in increased expense allocations to electric due to additional time related to substation maintenance planning, more focus on vegetation management, transmission/distribution relay modifications, and monitoring feeder loading.

E872

MG 119 Department Damage Prevention

Because of more underground facilities, beginning in 2024, the Damage Prevention Department (MG119) is being allocated to the electric division. Costs are being spent in order to provide a more active presence on the website and to local activities to reinforce the need to call 811 and follow up when damages occur.

FPUC's Response to Staff's Twelfth Data Request (Nos. 1-4)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWELFTH SET OF DATA REQUESTS

1. Referring to FPUC's responses in staff's third data request, please provide a response to question #2 regarding the term of the TCRR (e.g.: 2025-2030, 2025-2035 etc.) and its intended implementation date.

Company Response:

The Company expects the first use of the TCRR would be in late 2026 or 2027 and continue until the Company's next rate case when the investment and costs would be incorporated into base rates.

2. Referring to FPUC's response in staff's third data request #4, please expand upon the statement that "the technology being implemented is ultimately necessary and will provide well-defined befits to customers."

Company Response:

As noted in the third set of data requests, question #1, the Company anticipates utilizing the TCRR to recover an investment in an Enterprise Resource Planning System (ERP) which will be integrated with the Customer Information System that was placed into service during 2024. The Company currently executes its financial processes (including treasury management), supply chain processes, asset management processes and human resources processes using a number of manual processes. As a result, the Company has implemented a number of manual processes to transfer data between applications, facilitate data

reporting and analytics and ensure that the appropriate level of internal controls are in place. Additionally, with multiple technology applications the effort to ensure the appropriate level of cyber security is maintained is increased to ensure that the appropriate level of security is maintained for each application.

With the implementation of the CIS application, the Company has begun to transition its technology to a single platform that utilizes a consistent process across all of its business units, streamlines internal controls, and centralizes cyber-security processes that currently are executed across multiple business units using multiple applications. In connection with this initiative, the Company has selected SAP as the ERP platform. Implementation of an ERP is intended to eliminate manual processes, integrate processing and data processing and increase efficiency of internal controls across multiple operating cycles, including: human resources, supply chain, enterprise asset management, revenue and finance. The Company expects that the implementation of this technology will streamline operations, improve reporting and analytics, and increase the level of controls within its operations. This will result in an improved level of control and cost sharing across CUC's business units which will benefit its customers.

3. Referring to the First Revised Sheet No. 23 (legislative version)/proposed Sheet No. 6.012 (clean version), regarding deposits for binding cost estimates for undergrounding facilities, please provide reasons for the proposed revisions to deposit amounts for new construction and for conversions.

Company Response:

The new deposit amounts have been updated to reflect the changes in labor and transportation costs since 2014 when the existing deposits were developed. The detail was

provided as Exhibit "WH-4" to Witness Haffecke's testimony, which is reattached here for convenience.

4. Referring to Sheet No. 6.023 regarding temporary service charges, please explain why FPUC is proposing a Temporary Service charge of $135.00 when Schedule E-7, page 6 of 6 calculations indicates the actual cost to be $128.57.

Company Response:

After review, it was determined that the Administrative labor was input at .2 hours instead of the actual .25 hour. With this correction, the actual total cost would be $132.74 which we rounded up to $135.

FPUC's Response to Staff's Thirteenth Data Request (Nos. 1-9)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S THIRTEENTH SET OF DATA REQUESTS

Trend Factor Issue (Issue 4)

1. Please refer to the direct testimony of witness Michelle Napier, page 20, lines 4-19.

   Please provide a definition of the CPI used by the utility to determine its (non-payroll) inflation trend factor. Address in your response what inputs are incorporated to arrive at average CPI.

Company Response:

Historical CPI is based on a U.S. city average of all urban consumers which is not seasonally adjusted. The Company used the December 31, 2023 Bloomberg Weighted Average CPI Forecast to calculate average CPI for 2024 and 2025. These forecasts are derived from the latest monthly and quarterly surveys conducted by Bloomberg and from forecasts submitted by various banks. By using the Bloomberg Weighted Average, the Company is incorporating more than 40 different economist's expectations to calculate average CPI. No other sources of forecasted average CPI were considered as alternatives. The Company believes the average of multiple economists' expectations appropriately incorporates various expectations into the CPI forecast used for 2024 and 2025.

E884

2. Please refer to the direct testimony of witness Michelle Napier, page 20, lines 4-19.

Please identify what date(s) and source(s) of CPI was(were) used to develop the 2024 and 2025 values shown on MFR Schedule C-33, Performance Indices.

Company Response:

Please refer to the response to number 1 and the attached file DR 13.2 CPI data. For the forecast periods, the Bloomberg Weighted Average CPI Forecast was used.

3. Using the source specified in the response to question 2 on the previous page, provide the most recent forecast of average CPI for 2024 and 2025 and the date of the data source relied upon to calculate it.

Company Response:

Please refer to the response to 1 and 2. Please refer to the attached file "DR 13.3 Updated CPI data" for the most recent CPI forecast. This reflects actual CPI data through October 2024 and forecasted data for November 2024 – December 2025. The Company used the September 30, 2024 Bloomberg Weighted Average CPI Forecast to generate the updated amounts for this request.

The updated amounts reflected in DR 13.3 are not materially different from what was used in the rate case filing.

4. Please refer to the direct testimony of witness Michelle Napier, page 20, lines 15-16.

   a) Please describe how FPUC determined that the proposed inflation trend factor, based on average CPI, is the "most appropriate" trend factor to use in this proceeding.

   b) Discuss whether FPUC considered other sources for an inflation trend factor, including, but not limited to, the PCE (Personal Consumption Expenditures Price Index). Address in your response how the utility evaluated the reasonableness of the average CPI it used against other sources.

Company Response:

a. **Average CPI is the trend factor that was used and approved in FPUC's last electric rate case, as well as the Company's 2022 Florida natural gas rate case. We reviewed these factors based on the actual account data and found the type of factors used historically to be reflective of past changes. Moreover, it was consistent with our last electric filing and gas rate case, which promotes consistency across all of our Florida regulated operations. Anything that would change the trended data, either up or down outside of these trends, was reflected in the over/under adjustments in MFR C-7 (2024, 2025) page 7 and 8. As discussed below in part b, CPI and PCE would produce a similar result based on the September 30, 2024 forecasts.**

b. **As discussed in response to No. 1 herein, no other sources of forecasted average CPI were considered as alternatives. However, as demonstrated in the attached file "DR 13.4 CPI vs PCE" both CPI and PCE would produce a similar trend factor for this proceeding.**

   Furthermore, the 2025 2.31 percent increase used in this proceeding is in line with

Federal Reserve Chair Jerome Powell's targeted rate for inflation.

Miscellaneous Service Revenue (Issue 27)

5. Please refer to MFR Schedule E-13b (for the Projected Test Year ended 12/31/25), to answer the following questions:

a) MFR Schedule E-13b (Page 1 of 1) for the Projected Test Year Ended 12/31/2025 reflects that the utility is projecting 289 service charge transactions for Type 1 service charges (Initial Establishment of Service). Please state the number of transactions that were recorded for this metric in each of the years between 2020 – 2023 (actuals), and the number estimated for 2024.

b) MFR Schedule E-13b (Page 1 of 1) for the Projected Test Year Ended 12/31/2025 reflects that the utility is projecting 3,619 service charge transactions for Type 2 service charges (Re-established Service or Make Changes to Existing Account). Please state the number of transactions that were recorded for this metric in each of the years between 2020 – 2023 (actuals), and the number estimated for 2024.

c) MFR Schedule E-13b (Page 1 of 1) for the Projected Test Year Ended 12/31/2025 reflects that the utility is projecting 304 service charge transactions for Type 3 service charges (Temporary Disconnect then Reconnect Service Due To Customer Request). Please state the number of transactions that were recorded for this metric in each of the years between 2020 – 2023 (actuals), and the number estimated for 2024.

d) MFR Schedule E-13b (Page 1 of 1) for the Projected Test Year Ended 12/31/2025 reflects that the utility is projecting 245 service charge transactions for Type 4 service charges (Reconnect after Disconnect for Rule Violation in normal hours).

Please state the number of transactions that were recorded for this metric in each of the years between 2020 – 2023 (actuals), and the number estimated for 2024.

e) MFR Schedule E-13b (Page 1 of 1) for the Projected Test Year Ended 12/31/2025 reflects that the utility is projecting 6 service charge transactions for Type 5 service charges (Reconnect after Disconnect for Rule Violation after hours). Please state the number of transactions that were recorded for this metric in each of the years between 2020 – 2023 (actuals), and the number estimated for 2024.

f) MFR Schedule E-13b (Page 1 of 1) for the Projected Test Year Ended 12/31/2025 reflects that the utility is projecting 1,973 service charge transactions for Type 6 service charges (Collection Charge). Please state the number of transactions that were recorded for this metric in each of the years between 2020 – 2023 (actuals), and the number estimated for 2024.

g) MFR Schedule E-13b (Page 1 of 1) for the Projected Test Year Ended 12/31/2025 reflects that the utility is projecting 0 service charge transactions for Type 7 service charges (Temporary Service). Please state the number of transactions that were recorded for this metric in each of the years between 2020 – 2023 (actuals), and the number estimated for 2024.

h) MFR Schedule E-13b (Page 1 of 1) for the Projected Test Year Ended 12/31/2025 reflects that the utility is projecting 1,179 service charge transactions for Type 8 service charges (Returned Check Charge). Please state the number of transactions that were recorded for this metric in each of the years between 2020 – 2023 (actuals), and the number estimated for 2024.

i) MFR Schedule E-13b (Page 1 of 1) for the Projected Test Year Ended 12/31/2025 reflects that the utility is projecting 1,437 service charge transactions for Type 9 service charges (Miscellaneous Allowance and Adjustments). Please state the number of transactions that were recorded for this metric in each of the years between 2020 – 2023 (actuals), and the number estimated for 2024.

Company Response:

a. **Please refer to the attached file "DR 13.5 2020-2024 Misc Service fees".**
b. **Please refer to the file referenced in 5a above.**
c. **Please refer to the file referenced in 5a above.**
d. **Please refer to the file referenced in 5a above.**
e. **Please refer to the file referenced in 5a above.**
f. **Please refer to the file referenced in 5a above.**
g. **Please refer to the file referenced in 5a above.**
h. **Please refer to the file referenced in 5a above.**
i. **Please refer to the file referenced in 5a above.**
j. **Please refer to the file referenced in 5a above.**

6. Please refer to MFR Schedule C-5 for the Prior Year Ended 12/21/24 (Line 19), which reflects that the Jurisdictional Miscellaneous Service Revenue for that period was $162,665. Please demonstrate the calculation of this amount.

Company Response:

Please refer to the attached file DR 13.6 2024 Estimated Revenue.

7. Please refer to MFR Schedule C-5 for the Historical Prior Year Ended 12/21/23 (Line 19), which reflects that the Jurisdictional Miscellaneous Service Revenue for that period was

$213,028. Please demonstrate the calculation of this amount.

Company Response:

Please refer to the attached file DR 13.7 2023 Misc Revenue.

Conservation Clause Removal (Issue 31)

8. Please refer to MFR Schedule C-2 (for the Projected Test Year ended 12/31/25), and explain how FPUC determined the Conservation Revenue adjustment of ($883,887) presented in Column 2.

Company Response:

To forecast the revenue for the conservation clause, the forecast billing determinants of number of customers and kilowatt hours were multiplied by the 2024 approved conservation rate. The regulatory assessment fee amount was calculated on the forecast revenue. The difference between the revenue and the regulatory assessment fee of $883,887 was projected to be the conservation expenses plus either the under or over-recovery true up amount. On MFR C-7 (2025) accounts 906-910 are specifically conservation related. Therefore, these expenses were adjusted in the forecast to equal $883,138 and Taxes Other Than Income Tax was adjusted by $749 in order to project a zero effect on base rates which is the goal of the clause. The Company further notes that, on a historical basis, the Company segregates conservation revenue and expenses from base revenue and expenses by recording these costs in separate accounts. As in the conservation clause docket, if the costs and expenses are not the same, the over or under amount is recorded as an over or under-recovery. Therefore, the conservation clause has a zero effect on base rate calculations.

9. Please refer MFR Schedule C-2 (for the Projected Test Year ended 12/31/25), and describe the “Other” Operating Expense of ($883,138) presented in Column 2. Include in your response how FPUC determined the adjustment amount ($883,138).

Company Response:

Please refer to the response to question number 8.

FPUC's Response to Staff's Fourteenth Data Request (No. 1)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S FOURTEENTH SET OF DATA REQUESTS

1. Please refer to Florida Public Utilities Company's (FPUC or Company) Reponses to Staff's 7th and 9th Data Requests, specifically the attachments titled "DR 7.2." and "DR 9.1a and b" for the following request. Please submit an accompanying C-2 (2025) Schedule that accounts for the depreciation adjustments indicated in DR 7.2 and that fully reflects the income tax adjustments indicated in response DR 9.1.

Company Response:

Please refer to the attached file "DR 14.1 Revised C-2(2025 with 7.2 and 9.1".

FPUC’s Response to Staff’s Fifteenth Data Request (Nos. 1-3)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S FIFTEENTH SET OF DATA REQUESTS

1. Has FPUC made the appropriate adjustments to remove all storm hardening revenues and expenses recoverable through the SPPCRC for the 2025 projected test year?

a) Please explain how FPUC made the appropriate test year adjustments to remove revenues and expenses recoverable through the SPPCRC and where this is shown in the filings.

b) Explain how FPUC ensures that there is no double recovery between base rate revenue and SPPCRC revenue.

c) Does FPUC have an audit process to ensure that the methodologies used to track costs recovered through its various storm hardening and protection riders, including the SPPCRC, are appropriately implemented and followed? If not, why not?

d) What percentage of FPUC's storm hardening revenue and expense is recovered through the SPPCRC and what percentage is recovered through base rates?

Company Response:

a. First, to calculate 2024 revenues, the Company multiplied the SPPCRC rates for each year times the projected billing determinants of customers and usage to arrive at revenue included in MFR C-5 for 2024 and 2025 and removed the same amounts on C-2 for 2024 and 2025.

E904

For expenses, Company has separate subaccounts for the SPPCRC costs. The Company increased 2023 costs for the accounts that included these SPP costs by inflation and growth in MFR C-7 for 2024 and 2025, and therefore, used the same methodology to determine the amount of SPP costs included in the filing by increasing the 2023 SPP costs using the same inflation and growth. In addition, MFR C-7 (2024, 2025) pages 7 and 8 reflect an increase to adjust these costs to the amounts projected in the Company's SPPCRC 2024 and 2025 filings. These total amounts were then removed on MFR C-2 for 2024 and 2025. However, in removing these costs, the Company inadvertently removed the 2024 cost for inspection instead of the 2025 inspection cost which resulted in expenses net of taxes for 2025 being overstated by $57,238.

Amounts were also removed for depreciation, taxes other than income tax, and income tax. The calculations of all are provided on the attached file "DR 15.1a for SPP Adjustments".

b. Actual revenues and expenses are recorded to specific general ledger accounts so they can be identified and incorporated in the reports filed for SPPCRC.

c. Yes, when new programs are approved by the Commission and a regulatory asset/liability is created, there is testing by internal audit to ensure amounts are recorded as approved. Also, costs determined by staff for filings are reviewed by several levels of managers and are audited by the PSC auditors.

d. When the Storm Protection Plan Cost Recovery Clause was implemented, the Company determined what costs that would now be reported in the recovery clause were included in the base rate calculation in Docket 20140025-EI. These costs amounted to $975,504 and have been consistently removed from the SPPCRC filings. Since base rates are again being proposed in this docket, the Company in now proposing the removal from base

rates of all Storm Hardening/SPP related costs and that those costs be recovered, going forward, through the SPPCRC clause. Therefore, the Company has removed the $975,504 as a separate adjustment on MFR C-2 (2025). The intent being that no tree trimming, pole inspection or other SPPCRC-related costs be included in base rates.

2. Provide a description of the methodology(ies) used by FPUC to track costs recovered through the SPPCRC, and exclude them from the components of the base revenue requirement in this proceeding.

Company Response:

Please refer to the response to question 1 above.

3. Please identify all SPPCRC includable costs that FPUC recorded, by account, in 2023 and expects to record in 2024 and 2025.

Company Response:

Please refer to the response to question 1 above.

FPUC’s Response to Staff’s Sixteenth Data Request (Nos. 1-3)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S SIXTEENTH SET OF DATA REQUESTS

1. Please explain why no adjustment was made to Working Capital when removing non-utility plant.

Company Response:

The Company propane, merchandising, and jobbing, as well as all other non-regulated business accounting are not merged with the electric division costs or revenues. Instead, each business maintains its own balance sheet and income statement. The only non-utility plant was related to five vehicles used by employees that work on other business units. Any payroll or costs related to those employees were charged directly to those non-regulated business units. Only a portion of the plant and accumulated depreciation assets related to the other business units were on the electric books.

2. Please explain why Account 228.3 - Accrued Pension & Post Retirement Medical for the Consolidated Electric Division, located on Minimum Filing Requirement (MFR) Schedule B-3 (2025), Page 6 of 6, is a positive $6,543,474; while the same account for the Florida Common Division Allocation on MFR Schedule B-3A (2025) Page 3 of 3 is a negative $6,482,906.

Company Response:

The difference between the allocated portion of the balance from Florida Common on MFR

E910

B-3A and the amount in the electric business unit represents the net benefit plan liability or over funded status. The liability continues to decline over time based on the actuarial data. The Company expects benefit payments for both the pension plan and the OPRB plan will continue to decline over time. Although both plans are frozen for new participants, the assets continue to perform at a level that enables them to meet future obligations and reduce the Company's requirement to have to make contributions to cover any shortfalls.

3. Please explain why there are no retirements associated with the following accounts found on MFR Schedule B-7 (2025):

    a) Account 3970 – Communication Equipment on page 10 of 12.
    b) Account 3911 – Computer and Periphery on page 12 of 12.
    c) Account 3912 – Computer Hardware on page 12 of 12.
    d) Account 3914 – System Software on page 12 of 12.
    e) Account 3920 – Transportation Equipment on page 12 of 12.

Company Response:

a. When a plant account is amortized instead of depreciated, retirements are no longer made since the asset automatically retires at the end of the amortization period.

b. Twenty percent of this equipment is for new additions, not replacements of old equipment. The Company does not budget for retirements of the corporate common equipment because the net effect on rate base is zero. Therefore, in the rate case filing, the retirement was overlooked. Since five percent of the additions are allocated to electric, $16,962 of additions in electric do not have the associated retirement. If the equipment retired costs the same as the new additions, the only change would be a reduction of depreciation expense of $3,392.

c. Most of this equipment is for new additions, not replacements of old equipment except for an addition of $230,446 for NAS Disk space storage. The Company does not budget for retirements of the corporate common equipment because the net effect on rate base is zero. Therefore, in the rate case filing, the retirement was overlooked. Since five percent of the additions are allocated to electric, $11,522 of additions in electric do not have the associated retirement. If the equipment retired costs the same as the new additions, the only change would be a reduction of depreciation expense of $2,204.

d. This software is for new additions, not replacements of old equipment.

e. These vehicles being replaced will be re-deployed to other employees. At this time no vehicles have been identified for retirement.

FPUC's Response to Staff's Seventeenth Data Request (Nos. 1-3)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S SEVENTEENTH SET OF DATA REQUESTS

1. Please refer to Florida Public Utilities Company (Company or FPUC) Minimum Filing Requirements (MFR), Schedules D-1 and B-22 (both B-22 Schedules). Please explain why the "Net Accumulated Deferred Income Taxes" balances on Schedules B-22 do not equal the "Deferred Income Tax" balance on Schedule D-1A.

Company Response:

The reason the two schedules do not equal is because the B-22 schedules are based on year end balances and the D-1 and D-1A schedules are based on 13-month average balances. The allocated amount on B-22 page 2 is based on the 13-month average allocated amount. Please refer to the attached reconciliation "DR 17 Reconciliation B-3, B-22, D-1".

2. Please refer to FPUC's MFR Schedules B-3 (2025) page 6 of 6, lines 66 & 67, and Schedule D-1a page 3 of 3, line 6. Please explain why the 13-month average balances for the Accumulated Deferred Income Taxes are different on these two schedules.

Company Response:

Please refer to the attached reconciliation "DR 17 Reconciliation B-3, B-22, D-1".

3. Please refer to FPUC's MFR Schedules B-3 (2025) page 6 of 6, line 62 and Schedule D-1a line 7. Please explain why the 13-month average balances for the Regulatory Tax Liability are different between these two schedules.

Company Response:

MFR Schedule D-1a line 7 includes the allocated 13-month average amount of $15,552 from MFR B-3A (2025) line 61 plus the 13-month average amount of $4,432,723 from B-3 (2025) line 62. The two balances total the Regulatory Tax liability on D-1a and D-1a supplement (2025) line 7 of $4,448,275.

FPUC's Response to Staff's Eighteenth Data Request (Nos. 1-3)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S EIGHTEENTH SET OF DATA REQUESTS

1. Referring to FPUC's response No. 4 in Staff's Eighth Data Request, regarding Enterprise Resource Planning (ERP) costs incurred to date, please state the amount excluded from AFUDC.

Company Response:

There are currently no ERP costs that are excluded from AFUDC and all ERP related costs that have AFUDC have been removed from rate base. An estimated $21,385 of AFUDC related to the projected ERP was correctly removed in the 13-month average reduction to rate base of $731,263 in MFR B-1 (2025) line 7 for all CWIP that accrued AFUDC. Since AFUDC expense is below the line, there is no amount that would require an adjustment to Net Operating Income.

2. Referring to FPUC's response No. 5 in Staff's Eighth Data Request, regarding the estimated cost of $50-$70 million ERP system, please explain if the additional Human Resource Information System (HRIS) is included in the above estimated cost or if it would be an additional cost. If not included in the estimate, please state the additional estimated cost of HRIS.

Company Response:

Although the scope of the project, total amount, and how it will be implemented is still in the development stage, the $50-70 million projection in the response included all the items listed including the HRIS.

3. Please explain if the integration of HRIS into the ERP system is exclusively to be used by FPUC or if Chesapeake Utilities Corporation will also be benefitting from HRIS.

Company Response:

Yes, the entire project, including HRIS, will benefit all of Chesapeake Utilities Corporation. A portion of the total costs of $50 to $70 million would be allocated to FPUC electric.

77

FPUC's Response to Staff's ' Nineteenth Data Request (Nos. 1-26)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S NINETEENTH SET OF DATA REQUESTS

1. Please refer to Florida Public Utilities Company's (FPUC or Company) electronic Minimum Filing Requirements (MFR), Schedule D, MS Excel tab D-4a, 25 supplement, for the following questions:

   a) Please explain the reasoning for the issuance of the future notes, SN28 and SN29, found on MS Excel rows 40 and 41.

   b) Please explain the methodology used to project the coupon rate of 5.75 percent accompanying the above-referenced notes.

   c) In reference to the question above, does FPUC expect the coupon rate of 5.75 percent to change?

   d) Do you still expect to issue SN28 on January 1, 2025? If not, what is the new expected issuance date?

Company Response:

1a. These issuances will help fund our growth capital construction program and maintain our target capital structure. As discussed in my testimony, CUC's target capital structure is 50to60 percent equity as a percentage of total capitalization (including short-term debt). Over time, we strive to approximate the midpoint of 55 percent equity to total capitalization. Earnings retained and

E921

reinvested in the business partially help the Corporation fund our growth capital construction program. Any capital spend that is in excess of earnings retained is initially funded with short-term debt. As projects come online, we issue additional long-term debt and equity to stay within the target capital range and accordingly, reduce our short-term debt balances.

1b. The analysis used to project the forecasted interest rate of 5.75% focused on the 10-year and 20-year duration Treasury rates. Attachment "DR 19.1 Treasury Rates and BBB Spreads" provides a chart of the 10-year and 20-year Treasury rates for January 1, 2023 through November 29, 2024. The attachment also provides the 5 -year historical BBB Index Spread for the last 5 years. To forecast the interest rate for the 2025 future issuances CUC took an average for the last twelve months ("LTM") for both the Treasury Rate and Spreads as of June 30, 2024 (which was the end of the most recent quarter and the most recent available data at the time of the analysis). The LTM average Treasury rate and BBB Corporate index spread were added together to create the all-in-rate for the forecasted issuances. This analysis produced an all-in-rate of 5.73% which was rounded to 5.75% for the Schedule D MFR's.

As discussed in my Testimony, Treasury rates have remained elevated in 2024, longer than originally expected and projected by the financial community. Any new issuances will increase the average long-term debt rate included in the calculation contained in the MFRs. These uncertain market conditions are expected to continue in 2025, which will likely leave Treasury rates at or around current levels. By using the average rate for the LTM, CUC is incorporating the current and expected rate environment into the 2025 forecasted issuances.

1c. As noted in response to 1b the coupon rate of 5.75% is a forecasted rate calculated at the time of the filing. The actual rate for any new debt placements will be determined at the time any new debt financing is executed. If we update the analysis to be the LTM as of November 30, 2024, also included in Attachment "DR 19.1 Treasury Rates and BBB Spreads", the all-in-rate has only moved by approximately 0.25%. This does not represent a material movement in all-in-rates since we filed the rate case. In addition, there is significant variability in the rates from day to day even intramonth, as illustrated in the month of November. Finally, as a new administration takes over in 2025, there remains overall uncertainty as to where long-term interest rates will land.

Also, CUC issued a portion of the forecasted debt in 2024. In November 2024 the Company executed a Note Purchase Agreement, pursuant to which CUC agreed to issue 5.20% senior notes due November 1, 2029 (five years) in the aggregate principal amount of $100,000,000. The original forecast assumed the issuance of notes with maturities between 10 and 20 years. The 5-year senior note fits nicely into the Company's debt maturity profile and allowed us to take advantage of a favorable coupon rate.

CUC still plans to issue the remaining $150,000,000 of forecasted debt in the first half of 2025 and will likely look towards the longer end of the curve (10-year to 20-year maturities). Based on tenor and timing, a 5.75% coupon rate is still a relevant rate for the forecasted issuance for these longer-term maturities.

1d. See 1c for an updated timing on the forecasted issuance of $250,000,000 of long-

E923

term debt in 2025.

2. Please refer to FPUC's response to Staff's 6th Data Requests, specifically No. 27, part E, for the following request. What amount of contracting expense, if any, will be reduced as a result of consolidating some of the work previously preformed by contractors to now be preformed by the two new line supervisors? Please specify the amount, if any, by the Northeast and Northwest Territories.

Company Response:

There will be no decrease in the contractor expenses based on the work being performed by the two new line supervisors. Currently, the contractor workforce resources exceed our internal workforce resources. Based on the number of contractor resources on our property, the contractor supervision of that group will remain at the current level in order to ensure the safest and most efficient work environment.

3. Please refer to FPUC's response to Staff's 11th Set of Data Requests, specifically No. 12, part G, for the following request. Which expenses for "other health-related benefits" where not included in the projected 2025 test year?

Company Response:

All other health benefits described in Staff's 11th Set of Data Requests, number 12f, were included in the projected test year. As stated in the first paragraph of the response, 2023 costs were trended and adjusted for other known items. Only the C-35, which was based on the total Chesapeake corporation, inadvertently excluded some costs identified as "other health related benefits" in its budget data for 2024 and 2025. Therefore, the response to Staff's 11th Set of Data Requests, item 12, included an electric specific schedule which correctly included the costs.

4. Please refer to MFR Schedule C-20, page 3 of 3, line 15, specifically the $2.286 million in total Company property tax expense shown for the test year ending on December 31, 2025, for the following requests.

   a) Please provide a copy of the computation of this test year amount, including all assumptions, data, and quantifications in MS Excel format with all formulas intact.

   b) Please provide the total Company property tax amounts for each calendar year 2020 through 2023.

Company Response:

a. Please refer to the attached file "DR 19.4a property tax calculation".

b. The balances in property tax expense follow:

2020 $1,346,998

2021 $1,359,277

2022 $1,439,738

2023 $1,333,960

5. Please refer to MFR Schedule C-20, page 2 of 3, line 15, specifically the $1.534 million in total Company property tax expense (actual and/or projected) for the year ended December 31, 2024, for the following request. Please provide a copy of the computation of this projected prior year amount including all assumptions, data, and quantifications in MS Excel format with all formulas intact.

Company Response:

Please refer to the attached file "DR 19.4a property tax calculation".

6. Please indicate if the employee positions that are reflected in FPUC's payroll cost calculations in the 2025 test year reflect the Company's historic experience with vacancies or are at full complement pursuant to authorized levels. Please explain your response.

Company Response:

The employee positions reflected in Electric's payroll cost calculations in the 2025 test year reflect the Company's historic experience with vacancies. The 2025 monthly average vacancy is 29. The 2024 and 2023 monthly average vacancy is 29 as well.

7. Please provide a description of FPUC's, or Chesapeake Utilities Corporation's (Chesapeake) current merit and cost of living wage increase policies including policies that are expected to be effective in the test year.

Company Response:

We believe our employees are our most valuable asset and recognize that each employee must be valued as an individual and treated fairly and equitably. The Company has an annual merit wage increase process that occurs every year at the beginning of April. There is a projected budget increase of 3.5% of payroll expenses. Managers are allotted their merit pool of dollars to allocate pay increases to their team members based on Performance Scores, individual contribution and internal pay equity related to the job market value of the role where the team member is in their salary range. For example, if an employee is at the maximum of their salary range, they may be "red circled" and receive their merit in a one-time lump sum award, instead of a pay increase. Please see the attached file "DR 19.7 Compensation Administration Manual". Chesapeake does not have a cost of living wage increase policy.

8. Please list, by account, all stock-based compensation expense that FPUC, or Chesapeake, has included in its cost of service for the years 2020 through 2023, prior year 2024, projected test year ending December 31, 2025, and including, but not limited to, executive stock options, performance share awards and any other stock-based compensation awards that will result in such costs being charged to FPUC during the projected test year. In addition, please provide a description of each distinct stock-based compensation program that will result in charges to FPUC during the test year.

Company Response:

The Long-Term Incentive plan (LTI) is based on several components that benefit all customers including Earning Per Share, Return on Equity, Capital Investments and Growth. If annual goals are met, the LTI is awarded in company stock.

Below is the LTI included in Electric's cost of service for 2020 through 2023, prior year 2024 and projected test year ending December 31, 2025.

Stock Based Compensation:

FERC	2020	2021	2022	2023	2024	2025
5800	$ 4,517	$ 24,913	$ 14,661	$ -	$ -	$ -
5810	-	-	3,111	-	-	-
9010	2,008	5,750	8,366	1,411	1,465	1,521
9200	244,861	249,787	261,187	290,875	301,959	313,496
Grand Total	**$ 251,386**	**$ 280,449**	**$ 287,324**	**$ 292,286**	**$ 303,424**	**$ 315,017**

9. For FPUC, please provide the level of related incentive compensation bonus payments included in prior year 2024, and projected test year ending December 31, 2025.

Company Response:

The Company has a TIP (Team Incentive Plan) for all non-executive employees. The Electric incentive compensation (TIP) bonus payments in 2024 and projected test year ending December 31, 2025 are below:

	Capital	Expense	Total
2024 TIP Payment	164,745	291,440	456,184
2025 TIP Payment	170,965	302,317	473,283

10. Please provide the number of FPUC employees that were eligible to receive incentive compensation for each year 2020 through 2023, and for each year indicate how many did not or will not receive an award.

Company Response:

The number of direct Electric and allocated (each allocated employee counted as 1 instead of percent charged) non-executive employees that were eligible to receive TIP incentive compensation for 2020 through 2023, and those not receiving an award is below:

Description	2019 Paid in 2020	2020 Paid in 2021	2021 Paid in 2022	2022 Paid in 2023	2023 Paid in 2024
Total # of Eligible Employees	242	249	262	277	292
Total # of Employees Received Award	241	249	260	277	292
Total # of Employees Did Not Receive Award	1	0	2	0	0

11. Please provide a listing of the total compensation of each corporate officer of FPUC or any other entity whose executive compensation costs are charged or allocated to FPUC for 2020 through 2023 (and projected amounts for the same cost for 2024, and 2025). Please indicate the separate amounts charged to O&M expense and capitalized, and breakdown the total compensation by type including, but not limited to, salary, deferred compensation, stock options, vehicle allowances, etc.

Company Response:

Below is a listing of total compensation for each officer allocating to Electric.

	2020	2021	2022	2023	2024	2025
O&M Expense	$ 823,249	$ 929,726	$ 864,786	$ 780,675	$ 810,391	$ 841,275
Capitalized	$ 121,779	$ 172,928	$ 99,185	$ 35,519	$ 36,872	$ 38,281
Total Officer Compensation Allocated to Electric	$ 945,028	$1,102,654	$ 963,971	$ 816,194	$ 847,264	$ 879,556
Salaries	$ 429,224	$ 505,308	$ 491,933	$ 362,911	$ 376,739	$ 391,134
Short-Term Bonus	$ 255,974	$ 290,069	$ 160,358	$ 152,564	$ 158,349	$ 164,368
Long-Term Bonus	$ 255,983	$ 301,476	$ 297,098	$ 292,475	$ 303,619	$ 315,220
Signing Bonus & Other Awards	$ 3,847	$ 5,801	$ 14,583	$ 7,403	$ 7,685	$ 7,979
Vehicle Allowance	$ -	$ -	$ -	$ 841	$ 871	$ 854
Total Officer Compensation Allocated to Electric	$ 945,028	$1,102,654	$ 963,971	$ 816,194	$ 847,264	$ 879,556

A small number of officers receive a vehicle allowance. Most officers have a company vehicle.

12. Please provide a description of each of FPUC's employee benefit program(s) or plan(s) currently in effect, and projected test year 2025, if different from the current program(s) or plan(s).

Company Response:

Chesapeake's employee benefits program is an integral part of our commitment to provide an appropriate employee value proposition. Our benefits package is designed to support employee health, well-being, and financial wellness. In addition to competitive salaries,

and an incentive plan, our current benefit offerings include health, dental and vision plans, 401(k) plans, flexible spending accounts, paid time off and sick leave. We provide life insurance, and Short Term and Long-Term Disability Insurance along with an employee assistance program (EAP), tuition reimbursement, volunteer opportunities, paid bereavement leave, jury duty leave, along with flexible and hybrid work schedules. Chesapeake will continue to keep the same benefit plan design with the introduction of 2 added benefits beginning in 2025. The two added benefits include paid parental leave and two additional floating holidays.

Paid Parental Leave is a type of leave that allows eligible employees to take paid time off of work due to the birth or adoption of a child. We believe this enhancement to our benefits will support our employees during the life-changing moments of the birth or adoption of a child and contributes to a supportive work environment that fosters engagement and improves the overall employee experience. Our new paid parental leave consists of:

- **Up to four weeks of paid leave for the birth or adoption of a child**
- **The benefit is available to employees whose child is born or adopted January 1, 2025 or after**
- **Eligibility mirrors FMLA (1 year of employment)**

Floating holidays are paid days off of work that employees schedule for their personal use. We recognize that our employees bring a wide variety of backgrounds, beliefs, and experiences to the workplace. These two additional floating holidays will provide our team members an opportunity to take time off for occasions that are meaningful to them, whether cultural, religious, or personal. We believe these changes reflect our dedication to provide an inclusive and welcoming work environment.

13. Please refer to the direct testimony of FPUC witness Rudolf Davison, pages 8-9, for the following request. Please provide a copy of the compensation study used to evaluate FPUC's compensation and benefit programs against the external market discussed in this section of testimony.

Company Response:

Please see the attached compensation market study (Exhibit DR 19.13a and DR 19.13b) performed by external consultant Willis Towers Watson.

The following questions pertain to witness Crowley's direct testimony.

14. Please provide the work papers used by witness Crowley to develop his cost of equity analysis, that is, the Discount Cash Flow model (DCF), Capital Asset Pricing Model (CAPM), and Risk Premium model. If the work papers include spreadsheets, please ensure all links and formulas are intact.

Company Response:

Please refer to the attached file "DR 19.14 Work papers".

Please note that when preparing the Excel file for delivery, a slight discrepancy was observed between the Crowley Testimony presentation of market capitalizations in Exhibits NAC-28 and the Excel file's presentation of these exhibits. For example, in Table 7, in which the Risk Premia estimate of Natural Gas required return was presented as 9.90% in the Crowley Testimony document, but is 9.89% in the Excel file. Similarly, in Exhibit NAC-12, the weighted average CAPM beta for the gas proxy group was presented as 0.77 when in fact the correct weighted average beta is 0.76. In NAC-32, the weighted average market

returns are also affected. This is because some market capitalization weights were updated for the analysis prior to filing, after some of the appendix exhibits were finalized. These slight differences do not affect the final recommendation because, due to the formula structure of the spreadsheet, these older market capitalization numbers ultimately do not feed into the recommendations.

Also, please note that the attached file "DR 19.4 Workpapers" contains hidden sheets, which are integral to the analysis, but are hidden for ease of presentation.

15. Witness Crowley's testimony was filed on August 22, 2024. Please explain why he used market data from 2021, 2022, and 2023 in his DCF analysis.

Company Response:

The DCF analysis in this filing is used as one approach used to estimate FPUC's cost of equity capital. The cost of equity is an opportunity cost that cannot be directly observed, borne by the equity owners of FPUC's common shares. Estimations of this cost could be made using one year of data. However, a drawback to using a single year of information is that any single year could prove to be anomalous, or otherwise unrepresentative of the true cost of equity borne over the period of time during which rates are set. By using data from the three most recent available years, the analysis avoids the possibility of estimating a value that happens to be anomalous or unrepresentative.

As a secondary consideration, the estimation of a utility's cost of equity reflects the investment community's required rate of return on equity for a given level of risk. Investors assess the required return in relation to market expectations, which are set not only with information from a single year, but from several years of embedded experience. An investor's required rate of return on equity, and therefore FPUC's cost of equity capital, is

likely to correspond to several years of utility return expectations. Incorporating multiple years of DCF results in the cost of equity estimate therefore is sensible.

16. Please provide a list of the sources for all of the market data in Exhibits NAC-11 through NAC-36.

Company Response:

Individual Company Data (Market Sample Data) –

- **CAPM Betas - ValueLine**
- **Share Price – Morningstar Data**
- **Shares Outstanding – Morningstar Data**
- **Dividends Per Share - Morningstar Data**
- **CPI & Employment Data – Federal Reserve Economic Data (FRED)**

US Historical Return Data-

- **Treasury Bills – Center for Research in Security Prices (CRSP)**
- **Market Capitalization Data - Center for Research in Security Prices (CRSP)**
- **Inflation Data- Center for Research in Security Prices (CRSP)**
- **Long Term Debt Data - Center for Research in Security Prices (CRSP)**

FPUC Short- and Long- Term Debt Data- Provided by FPUC

17. Did witness Crowley compare any risk factors of the gas proxy group to the risk factors of FPUC? If yes, please list and explain the risk comparison.

Company Response:

Yes. A qualitative assessment of the risk factors of the gas proxy group was considered with respect to FPUC. The gas distribution utilities in this sample provide gas delivery services to end use customers (i.e., homes and businesses), through a distribution pipeline network which transports commodity gas from the transmission pipelines to individual customer delivery points and meters, acting as the final link in the natural gas supply chain to consumers. In this regard, risk metrics of the gas proxy group closely compare to that of

FPUC's electric operations: both provide essential services required for a functioning economy; own and operate substantial, long-lived capital infrastructure; and operate in a regulated utility environment. The gas proxy group consists of investor-owned utilities. Thus, gas utilities face many of the same financial, regulatory, and cybersecurity risks as electric utility operations, like those of FPUC.

Importantly, FPUC's electric operation faces weather-related risks that would generally not affect the gas utilities in this sample. While, to some extent, all electric utilities face weather risks, the geographic location of FPUC, in a state that may encounter hurricanes and tropical storms, could lead to more damage to the infrastructure assets of FPUC's electric operations than the industry average. Indeed, FPUC's western division was devastated by Hurricane Michael (2018). All else equal, this would make the gas proxy companies less risky, and therefore the inclusion of gas companies could bias the cost of equity estimation downward.

18. Please refer to page 49, lines 5 through 8 for the following requests.

a) Please explain how witness Crowley calculated the overall market return.

b) Did witness Crowley use an arithmetic average or a geometric average?

c) Please list the source of the equity returns.

d) Please explain how witness Crowley estimated the expected inflation rate of 2.46 percent and the source of his information.

Company Response:

a) **The overall market return was calculated using a 30-year average of capital appreciation plus dividends from 1993 to 2023 using data from the Center for Research on Securities**

E934

Prices.

b) **Arithmetic measures of historical growth is our general approach. Arithmetic measures of growth better capture expectations of future value (market value, earnings, dividends, etc.), and takes account of the inherent risk associated with growth essentially recognizing growth as a stochastic time-series process. Geometric measures of historical growth can understate future value. In essence, the use of geometric metrics to estimate future experience is deterministic and, all too often, understates future prospects.**

c) **The Center for Research on Securities Prices.**

d) **The inflation estimate of 2.46 percent was calculated as the average of two estimates:**

(1) an estimate using Treasury Inflation Protected Securities ("TIPS") that relates 5 to 10 -year inflation expectations, as shown in Table 1:

Table 1: US Treasury Constant Maturity Minus TIPS

Implied Expectations of Inflation, Inferred from Financial Markets (%)					
				Expected Inflation: Years 5 - 10	
Time of Sample of Market Yields	U.S. Treasury Yield Differences: Constant Maturity minus TIPS* 5-year	7-year	10-year	Expectations, year 5 through year 10	Difference between 2nd and 1st 5-year
2022	2.95	2.85	2.69	2.44	-0.51
2023	2.43	2.47	2.46	2.49	0.06
2024	2.48	2.49	2.46	2.44	-0.04

* Adjusted for inflation and liquidity risk premia

(2) the average of three surveys for the years 2024 and 2025: the Livingston Survey conducted by the Federal Reserve Bank of Philadelphia, the Survey of Consumer Expectations by the University of Michigan, and the Survey of Professional Forecasters

also conducted by the Federal Reserve Bank of Philadelphia. The results of these surveys is summarized in Table 2 below:

Table 2: Inflation Expectations, Survey Responses

Forward Period	Time of Survey of Projections of Price	*Surveys of Markets and Forecasters*				
		Livingston Survey		SRC Survey of Consumer Expectations	Survey of Professional	
		CPI	PPI		CPI	PCE
2024	2023	2.50	2.10	3.92	2.57	2.39
2025	2024	2.20	1.90	3.00	2.38	2.10
2023-2028	2023				2.57	2.42
2024-2029	2024				2.30	2.05

19. Please list the source from where witness Crowley obtained the risk-free rates in Table 4 on page 50.

Company Response:

The "Low" risk-free rate in this table was calculated as the average of monthly market yields on 30-year Treasury securities between January 2018 and June 2024, excluding the pandemic year of 2020. The "High" risk-free rate in this table was calculated as the average of monthly market yields on 30-year Treasury securities from April 2023 to June 2024. These data were obtained from the Federal Reserve Bank of St. Louis.

20. Please explain how witness Crowley adjusted the CAPM Betas in Exhibits NAC-11, 12, and 13. What is the reason for the adjustments?

Company Response:

Estimated betas were adjusted for central tendency based on the methodology pioneered by Marshall Blume. The so-called Blume methodology derives from the work of Marshall Blume, as first presented in the article, "On the Assessment of Risk," Journal of Finance,

E936

Vol. 26, 1971. In this paper, Blume demonstrated that the estimated values of risk coefficients in one period are biased assessments of future values. His methodology, adopted in this analysis, corrects for this bias of betas to "regress toward the mean" by adjusting the beta values toward 1.0. The specifics of this adjustment can be found in column F of sheet "CAPM" in the attached file "DR 19.14 Work papers".

In this case, because the 2023 unadjusted betas are close to 1.0 (for example, the weighted average electric sample beta equals 0.97), the adjustment is very small (adjusted to 0.98).

The alternative approach to adjust the estimated raw Betas is the so-called Vasicek technique, as proposed by O.A. Vasicek in "A Note on Using Cross-Sectional Information in Bayesian Estimation of Security Betas," Journal of Finance, vol. 28, 1973. The drawback to the Vasicek approach is that considerable information is required for implementation.

21. Please explain how witness Crowley estimated the expected growth rates in Exhibits NAC-16, 17, and 18. Please list the source of the information.

Company Response:

The expected growth rates used in the DCF analysis were based on a weighted average of the ten-year average of earnings per share growth rates for each company in the sample plus the ten-year average of dividend per share growth. For a given company in the sample, the calculation is as follows:

E937

$$\textit{Expected Growth}$$

$$= \left[(0.1) * \left(\frac{1}{10}\sum_{t=1}^{10} \textit{EPS Growth Rate}\right)\right]$$

$$+ \left[(0.9) * \frac{1}{10}\sum_{t=1}^{10} \textit{Dividend per Share Growth Rate}\right)\right]$$

22. Please explain how witness Crowley calculated the historical market returns for the utility companies in Exhibits NAC-29, 30, and 31. Please list the source of the information.

Company Response:

The historical market returns were determined by calculating annual capital appreciation plus dividends for each year for each company in the sample. Data was obtained from ValueLine and Morningstar Data.

23. Please refer to Table 7 on page 55 for the following requests.

a) Please provide all calculations, source materials, and spreadsheets with formulas and links intact used to develop the Risk Premia Analysis Results.

b) Please describe and list the source and companies included in the Equity Returns for the Large-Cap Stocks.

c) Please describe and list the source and companies included in the Equity Returns for the Small-Cap Stocks.

d) Please describe and list the source and type of U.S. Treasury Debt for the LT US Debt, InT US Debt and T-Bills.

Company Response:

a) **For calculations, source materials, and spreadsheets, please see "DR 19.14 Work papers".**

b) **Returns on Large Cap equities were obtained from the Center for Research in Securities Prices. This data includes U.S. companies that comprise the top 85% of investable market capitalization.**

c) **Returns on Small Cap equities were obtained from the Center for Research in Securities Prices. This data includes US companies that fall between the top 85% and 98% of investable equity market capitalization**

d) **Data on returns to US Treasury debt was obtained from the Center for Research in Securities Prices.**

24. Please refer to page 38, line 16, Please explain the meaning of the phrase ". . .future returns harbored by investors may assume a pattern of non-constant growth?"

Company Response:

Models of equity cost rates that utilize expectations of growth, like those used in the DCF framework, often assume static, constant growth rates of earnings and dividends. On average, these model assumptions are plausible and are key to the projections of stock analysts which in turn shape the expectations of investors. However, for a particular utility during a particular period of time, growth may not proceed at a constant rate. Instead, businesses often experience periods of temporary weakening or strengthening of realized returns, resulting from various random events inherent to revenue and cost flows. Investors may also incorporate ad hoc assumptions related to this kind of non-constant growth when making investment decisions.

25. Please explain why witness Crowley chose to use a proxy group of gas utilities in addition to the electric utilities proxy group.

Company Response:

As stated in response to Question 17, gas utilities face many of the same financial, regulatory, and cybersecurity risks as electric utilities like FPUC electric operations. It is reasonable to include a parallel utility industry to capture market expectations related to these risks.

26. Please explain why witness Crowley did not compare the capital structures and equity ratios of the utilities in the gas and electric proxy groups to that of FPUC.

Company Response:

The sample selection process utilizes capital structure information to assess whether the

sample's debt-equity ratio reasonably compares to FPUC. However, the data was not presented in the filed exhibits. The sample has a weighted average debt to equity ratio of 1.23, compared to FPUC's debt-equity ratio, which ranges from 0.95 to 1.10 from 2021 to 2025 (see Table 9 in Witness Crowley testimony).

Table 1, below, displays the debt-equity ratio for the utilities in the sample from 2014 to 2023. The data indicate that debt-equity ratios can vary substantially over time and across utilities.

Table 1: Debt-Equity Ratios for Sample Utilities (2014-2023)

Company	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
ATMOS Gas	86%	91%	87%	90%	64%	69%	67%	62%	63%	63%

COMPENSATION & BENEFITS PHILOSOPHY STATEMENT

Compensation Philosophy

Our compensation philosophy is to provide market competitive compensation and benefits that support our culture to be an employer of choice and increase our ability to attract, motivate and retain a talented workforce. We pride ourselves in offering competitive compensation and benefits structured to meet employees' personal and work-life needs and recognize their contributions to the organization.

We believe our employees are our most valuable asset and recognize that each employee must be valued as an individual and treated fairly and equitably.

Our Compensation Plan is structured to recognize and reward individual performance through merit pay and to ensure that compensation for each job is linked to the market (which approximately represents the 50th percentile), based on the job skills and requirements. We annually compare all jobs to the market through formal surveys to ensure competitiveness within our marketplace and industry.

Benefits Philosophy

As part of our goal to be an employer of choice, we provide a competitive benefits package that includes the following:

- Medical Insurance and Prescription coverage
- Dental and Vision Insurance
- Paid Time Off (PTO)
- Sick Time
- Disability and Life Insurance
- 401k Deferred Compensation Plans with a safe harbor matching component and the opportunity for a supplemental matching contribution as well (on up to 6% of eligible cash compensation)
- Flexible Spending Accounts
- Tuition Reimbursement
- Wellness Program
- Recognition Program
- Volunteer time
- And more (See benefits materials for details)

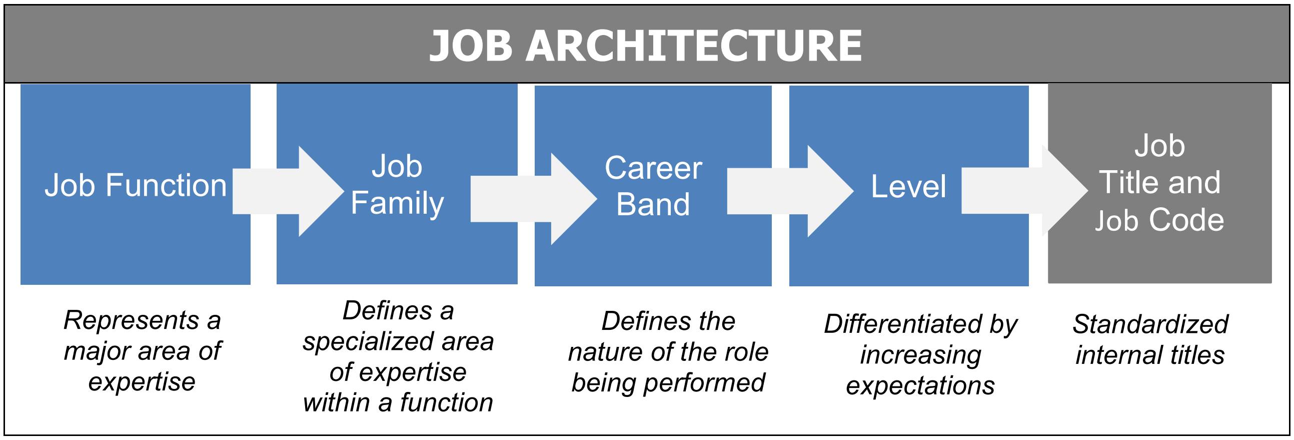
To ensure we are competitive, we also target the median (50th percentile) benefit levels in our market. We annually compare our benefit plans to the market and make changes as appropriate. As a result of our yearly analysis, we strive to provide a benefits package that will attract, motivate, and retain a talented workforce.

COMPENSATION SUMMARY

To carry out our Compensation Philosophy, a Job Architecture has been developed to provide the necessary foundation to manage jobs, roles, skills and careers across the Chesapeake organization. The Job Architecture will establish a framework for understanding comparable roles within the organization and provide a systematic approach for determining relative value based on the overall

E992

responsibilities, scope and expected contribution for each job (not the volume of work, the incumbent's performance or current pay).



See Appendix C - CUC Job Functions, Families and Career bands

Tools and Best Practices to Attract, Motivate and Retain

Below is a list of compensation tools and best practices that we use to ensure that we attract, motivate and retain a talented workforce.

<u>Annual Performance Evaluation (merit increases)</u>

Our pay for performance philosophy is to reward employees with merit increases resulting from their achieved performance level. Each full or part time employee may be considered for a merit increase at least once a year. Each year the Senior Leadership Team along with the Compensation Committee establish an annual merit increase pool of dollars.

The purpose of the merit increase system is to link the results of an employee's performance evaluation to increases in the employee's base pay. **Length of service or time spent in a job does not justify a pay increase.** Those employees whose performance meets or exceeds standards may see this reflected in their merit increase. However, those who fail to meet standards, or whose performance is unacceptable, may not be eligible for merit increases.

Further, employees at or above the pay grade maximum <u>will not</u> receive a merit increase. However, they may receive a lump sum payment based on the merit increase percentage and their annualized budgeted hours. The lump sum will be split in payments made in April and September.

Employees with pay currently below the pay grade maximum – but who would exceed the maximum if given the full merit increase – may receive a merit increase that brings their pay to the pay grade maximum. They may also receive a lump sum payment for the remainder of their merit increase.

Union employees will follow their respective collective bargaining agreements. New hires must have completed at least 90 days of employment by December 31 to be eligible for the merit increase.

Each year, Supervisors/Managers evaluate their staff using the Performance Review Form. Forms will be available in October and need to be finalized by the end of January. Employees are evaluated on a calendar year basis, and merit increases are effective on the first date of the pay period closest to April 1st of the following year.

Employees will be evaluated on a host of capabilities utilizing a 5-point scale, which is outlined below:

1	2	3	4	5
Unacceptable	**Needs Improvement**	**Meets Expectations**	**Exceeds Expectations**	**Outstanding**
Consistently fails to meet job requirements; Performance is below minimum requirements and immediate improvement is required in order to maintain employment.	Occasionally fails to meet job requirements; Performance must improve to meet all expectations of job position.	Able to perform 100% of job duties satisfactorily. Normal guidance and supervision required. Meets all required expectations.	Frequently exceeds job requirements; all planned objectives were achieved above the established standard and accomplishments were made in unexpected areas as well.	Consistently exceeds job requirements. This is the highest level of performance that can be attained.

Signed Performance Review Forms must be returned to HR Compensation no later than April 30 to be uploaded to employees' UKG profiles.

Internal Equity

When hiring new employees internally or externally, Human Resources / Compensation reviews the pay rates for employees within the same function, family, career band and level to maintain internal equity. This allows CUC to consistently monitor and ensure employees are paid market competitive wages based on total years of experience, expertise and performance.

See Appendix A for an internal equity example.

Market Analysis

The competitiveness of the pay structures and ranges are assessed annually, based on compensation surveys of comparable jobs to ensure external equity is maintained. Periodic structure adjustments will assure that jobs are placed in correct ranges. If there is evidence of a change in market position, ranges may be adjusted according to the program's objectives and ability to pay within budget.

If, indeed, HR determines to increase the ranges to maintain competitiveness, a percentage would be applied to the midpoint of the first pay grade. The remainder of the structure would be adjusted accordingly. These adjustments do not change the grades to which positions are assigned and do not result in automatic changes in individual employee pay levels. However, any employee who falls below the adjusted range minimum may receive a pay adjustment to the new minimum assuming acceptable performance.

E994

ANNUAL MARKET ANALYSIS TIMELINE	
SEPTEMBER (after Salary survey results are published)	Review and analyze all non-union positions at CUC versus the market.
OCTOBER	Present market analysis to HR Leadership and provide final market adjustment recommendations to CHRO. Request budget approval for market adjustments.
JANUARY	Implement approved market adjustments and new salary ranges, if applicable and subject to budget availability

New Hire Starting Pay

The CUC new hire starting pay strategy is to provide a market competitive rate for new hires based on their total years of experience as well as their knowledge and skills.

A new employee who is hired into a position is provided with a salary/wage that is commensurate with their knowledge, skills and experience. A new hire's pay is determined based on the following guidelines:

- The salary/wage cannot be below the minimum value of the position grade.
- The salary/wage typically should not exceed the midpoint value of the position grade. (10 years of experience is the mid-point)
- Within this range, the salary/wage is determined primarily based on qualifications and prior years of related experience, with consideration given to the range locations of incumbent staff.

Hiring new employees close to the midpoint of the pay range may present internal equity and compression issues with incumbents in the same position. It is the responsibility of the Hiring Manager and Human Resources to carefully consider the implications of such a decision. Exceptions should be made only when the candidate pool for a position is extremely limited and such a pay decision is the only way to ensure appropriate staffing levels.

New hire rates are recommended by Compensation Department and communicated to the HR Business Partner and/or Recruiter to communicate to the hiring manager or business unit leader.

Position Change Process

In the case of a promotion, lateral transfer or reassignment, the following steps will be taken to ensure appropriate pay adjustments:

1. The Human Resources Business Partner will process the Employee Change Form (ECF) for approval through Right-Signature.

2. The manager then forwards the completed ECF to the Human Resources Department.

3. Pay adjustments outside of the merit cycle must be approved by the Senior Leadership Team and the Human Resources Department prior to being communicated to the employee.

4. Within two weeks of the employee assuming the new position, the new manager provides the employee with a new job description and conducts a discussion regarding responsibilities and performance expectations for the next performance review.

The effective date of the job change should be the date the employee assumes the duties and responsibilities of the new position, and must coincide with the first day of a pay period.

Promotional Increase

A promotion is when an employee is moving into a higher pay grade or level, or there are additional higher-level responsibilities assigned. HR Business Partners will collaborate with Compensation Department as necessary to determine the appropriate pay increase and will be responsible for communicating with the Manager. The respective department and unit's budgets must always be considered by the hiring manager when making any adjustment to an employee's pay.

To determine the promotional increase, you would multiply the employee's current rate of pay by 5% for each pay grade to determine the promotional increase, or you can follow the guidelines on this table.

Current Position in **New Range**	**Recommended Increase** (as % of current base salary)
At or above max	No increase
Between mid and max	Up to 5%
Below mid	Up to 10%

If the new rate of pay calculates below the minimum of the new pay grade, then the minimum of the new pay grade is used.

If, after calculating the promotional increase, an employee's pay exceeds the pay grade maximum, their pay is brought to the maximum.

For more questions or help with a promotional increase, please contact the Compensation Department.

Demotion/Reassignment Decrease

Demotion is defined as an employee moving into a lower pay grade. To determine the amount of decrease to the base salary, you would reduce the employee's current rate of pay by 5% for each pay grade reduction to determine the decrease in their rate of pay.

In the event that this decrease still results in the employee being over the maximum of the new pay range, the new pay rate would equal the maximum of the new pay range. For more questions or help with an employee receiving a demotion, please contact Human Resources.

Under no circumstances can an employee's pay rate be decreased without consultation with HR, written advanced notice of the pay decrease and their new rate of pay. TIP target percentages may also be adjusted due to the demotion.

Position Re-evaluation

A position may be re-evaluated to recognize significant changes in job content and may be assigned to a different pay grade as a result.

Provided an incumbent has not demonstrated less than acceptable performance, an employee within a position that is reclassified to a higher pay grade may be treated as if he or she is receiving a promotion.

Lateral Transfers

A lateral transfer occurs when an employee assumes a job that has the same pay grade and pay range as the employee's current position, but is either in a different department or has substantially different duties. A lateral move provides an opportunity for employees to broaden their skills and experience to further career development in another area or location.

An employee transferring to a position of the same grade may not normally receive a change in salary/wage as a result of the transfer. However, various circumstances, for example the level of pay for other employees within the position or the transferred employee's prior related work experience applicable to the position, may be considered as reasons for a change in pay.

Under no circumstances, can an employee's pay rate be decreased without consultation with HR, as well as written advanced notice of the pay decrease and their new rate of pay.

Movement within the Range

Employees may progress to their pay range midpoint over time assuming they continue to develop their skills and become fully functional in their position. This period of time may vary for different levels of positions and is based upon demonstrated performance. Pay levels in the upper third of the range should be reserved as incentive compensation for those individuals, generally a small number, who consistently produce outstanding results or perform beyond the scope of their responsibilities.

Minimum: The lowest salary that may be paid to individuals qualified to hold positions in this range. Individuals with minimum experience who require extensive training, or who have transferred into the position from another field, should be hired close to or at the minimum.

Maximum: Highest salary that should be paid to individuals in this range. Any salary increase for individuals over the maximum is considered on a case-by-case basis. If warranted, performance may be recognized in the form of a one-time lump sum award.

CHESAPEAKE UTILITIES CORPORATION

SALARY RANGE POSITIONING			
Minimum	**Midpoint**		**Maximum**
1st Quartile 0-25th percentile of range	**2nd Quartile 25-50th percentile of range**	**3rd Quartile 50-75th percentile of range**	**4th Quartile 75-100% percentile of range**
Entry-level employees who are comparatively inexperienced and who are in the process of developing their skills, abilities, and knowledge in their field.	Employees progressing satisfactorily toward achieving a standard level of performance in their job duties and responsibilities or have a proven record of accomplishment in their field.	Employees fully qualified to hold positions within this range. Individuals with a few years' experience who require minimal or no training may be paid close to or at the mid-point.	Employees who have consistently demonstrated outstanding performance in a position, and/or have demonstrated consistently good performance over a long period.

Years of Relevant Experience

- Count all specific job-related experience at CUC and outside of CUC.
- May count a portion of indirect job-related experience at CUC and outside of CUC (e.g. – Customer Service Representative with 10 years of experience is hired as a CSR Supervisor – may count a portion of this experience towards Supervisor role).
- Experience related to gaps in employment of more than 10 years does not count.

Interns, Temporary and Part-time Employees

Interns, Temporary and Part-time (<30 hours/week) employees are not assigned a specific number of hours, are not eligible for employee benefits, and are not eligible for merit increases in hourly pay.

Employee Recognition

Leaders across CUC are encouraged to recognize their staff regularly in a variety of tangible and intangible ways including but not limited to: thank you cards, department outings, lunch appreciation days, bagel/coffee appreciation days, gift cards, verbal and other written forms of appreciation. It should be noted that any employee recognition with a cash or cash equivalent value is considered taxable fringe income and subject to Federal and State tax withholding. This should be communicated to employees and Payroll at the time of receipt of a cash or cash equivalent recognition.

In addition, employees may also be recognized through the Team Incentive Plan (TIP) which provides for a potential annual payout, no later than the end of March of the following calendar year for eligible employees that have contributed to the success of the Company. The following matrix may be used to calculate TIP payouts:

TIP TARGETS Job Level	Target Bonus Opportunity %
M3	20%
P5, M2	15%
P4, M1	12%
W4, U4, T4, P3	10%
W3, U3, T2, T3, P1, P2	8%
W1, W2, U1, U2, T1, Union	6%

What should you say when your employee(s) question their pay in relation to what they hear other employers are paying or compared to online pay information?

Here are some questions to ask:

- Is the rate of pay being quoted equal to base pay or does it include differentials, overtime or other types of compensation?
- Are you comparing similar jobs? Job duties and responsibilities vary by employer; therefore, positions with the same job title at another employer may be slightly to significantly different.
- Were multiple survey sources used? Many online compensation tools use market data from one source and this may skew the data too high or too low. CUC uses multiple survey sources and various cuts of market data to ensure we are comparing our jobs very closely to jobs in the marketplace.
- How current is the compensation data? CUC "ages" the market data it receives to make sure it reflects what the market is currently paying for jobs. CUC is also regularly in the market recruiting for jobs so this provides real-time access and knowledge regarding market trends.

See Appendix B for a list of CUC pay grades.

Appendix A

INTERNAL EQUITY EXAMPLE

Which example below best illustrates internal equity (employees all work in the same position and they are all Solid performers)?

A. Sue makes $13.00/hour and has 4 years of experience. Erin makes $16.00/hour and has 10 years of experience. Tom makes $14.00/hour and has 12 years of experience.

B. Sue makes $17.00/hour and has 15 years of experience. Erin makes $15.00/hour and has 11 years of experience. Tom makes $12.00/hour and has 5 years of experience.

C. Sue makes $13.00/hour and has 3 years of experience. Erin makes $12.00/hour and has 5 years of experience. Tom makes $11.00/hour and has 4 years of experience.

The answer is "B" because in this situation the employees with less years of experience are always making less than the co-workers with more years of relevant experience. CUC works hard to maintain internal equity and this is one of the main reasons why CUC Human Resources handles all new hire or promotion offers.

Appendix B

2024 SALARY RANGES
(Effective 01/01/2024)

Grade	Min	Mid	Max

• Achieves goals through the work of others ▪ Management responsibilities include performance appraisals, pay reviews, training and development ▪ Job focus is on managing others and applying operational or strategic management skills	▪ *Applies a theoretical knowledge-base to work to achieve goals through own work* ▪ *Characterized by specific functional expertise typically gained through formal education* ▪ *May provide guidance to others as a project manager using technical expertise*	▪ Performs technical work, often in support of professional roles ▪ Requires vocational training or the equivalent experience ▪ Performs duties according to established procedures	▪ Performs clerical or administrative work ▪ Uses administrative, data organizing and coordination skills to complete work ▪ Performs duties according to established procedures	▪ Performs operational, craft or manual tasks ▪ Typically requires vocational training, apprenticeships or the equivalent experience ▪ Performs tasks according to established procedures

APPENDIX E

Spot Awards Policy and Guidelines

Purpose
A **Spot Award** recognizes exceptional performance by an employee beyond regular day-to-day activities and assignments.

Eligibility
All employees, up to the director level, are eligible to receive a spot award. Independent contractors and temporary employees, whether contracted by the company or through an agency, are not eligible to receive an award.

Special Project/Assignment Definition

- Financial impact of the project
    - Tier 1 – Annual financial impact - $50,000 - $99,999
    - Tier 2 – Annual financial impact - $100,000 - $199,999
    - Tier 3 – Annual financial impact > $200,000
- Degree of difficulty and/or impact to overall organization
- Above and beyond normal job responsibilities
- Projects should have an approved budget to include spot awards
- Finance should determine if the project, including budgeted awards, can be capitalized

Award Criteria
The amount of a spot award should be dependent on the nature and complexity of the accomplishment and the ability of the department to fund the award.

An award is considered taxable income and will be reflected on the employee's pay statements. An award will **NOT** be grossed up for the tax impact.

The award should be presented to the employee within 30 days of the achievement with written recognition preferred regarding the accomplishment and award.

Award Levels	Contribution Level	Project Financial Impact		
		Tier 1	Tier 2	Tier 3
1	Basic contribution, but above and beyond	$500	$1,000	$2,000
2	Key contributor. Multiple hours contributed outside work hours.	$1,000	$2,000	$4,000
3	Engaged for extended hours during the project/process. Very high impact on incident management and made critical contribution	$1,500	$3,000	$6,000
4	Engaged through the entire project/process and were critical and central to the effort.	$2,000	$4,000	$8,000
5	Project Lead/Manager	$2,500	$5,000	$10,000

- A manager has the discretion to initiate an award for a specific employee and/or project participants, with approval from the department director and a senior officer.
- Spot awards must be proposed within 30 days of the project completion.
- Documentation must be submitted to CHRO for review and consideration with the SLT.
- Any deviations to the award amounts should be reviewed and approved by SLT.
- Once approved, the manager should clearly communicate to the recognized employee the specific outstanding achievements that led to the award. The appropriate paperwork will be submitted to payroll for processing, after final approval.

APPENDIX F

Sign-on Bonuses

A sign-on bonus is a discretionary bonus that serves as a recruitment incentive. This initiative aids in the employment of individuals for critical positions that have labor market shortages which may affect the business needs of the company.

Funding
Bonuses will be funded from the hiring department's budget.

Criteria

For a Specific Job Classification
To enhance the ability to recruit qualified candidates during labor market shortages, a supervisor may recommend offering sign-on bonuses to candidates hired into positions for a specific job classification within their department. To qualify, the department must demonstrate that the job classification is critical to the company's mission, there is a labor market shortage, and the inability to hire qualified candidates would impair delivery of essential services.

For an Individual Position
A department may request to offer a sign-on bonus for an individual position if the division can demonstrate that the position is critical to the company's mission, the labor market is particularly competitive for the skillset and experience required for that position, and the company's inability to recruit and hire a qualified candidate would negatively affect the delivery of essential services. This option is typically reserved for instances where the position is the sole individual, or one of two individuals, fulfilling a role at the company.

Responsibilities

- **Supervisor:** Identifies need(s) for bonus and discusses request with Business Unit Director.
- **Business Unit Director:** Consults with Senior Leadership regarding available funding, and pay equity considerations. Prepares and submits required form to Human Resources Compensation Manager.
- **Human Resources Compensation Manager:** Reviews the form and if approved, routes to additional approvers, if applicable. HR Compensation Manager communicates approved amount to Recruiter for inclusion in the offer letter.

Approvals
Human Resources reviews the bonus request form, the amount requested, and all supporting rationale to determine eligibility for approval. Depending on the bonus amount requested, additional approvals are required as identified below:

- Sign-on bonuses exceeding $5,000 must be approved by the SVP, CHRO.
- Critical to fill non-exempt jobs may qualify for up to $5,000.
- Critical to fill exempt non-management jobs may qualify for up to $10,000.
- Critical to fill exempt management jobs may qualify for up to $25,000.

Eligibility

- Must be hired for a permanent full-time position
- Must not have previously worked as a permanent full-time position for the company

E1006

Declining Participation
If a sign-on is offered to an applicant, the applicant is free to decline it. Sign-on bonuses are not mandatory, and it is not a condition of employment for someone to accept a sign-on bonus.
Applicants may elect to decline a bonus agreement and not receive a sign-on or retention bonus, but the employee must sign the repayment agreement to receive the bonus

Repayment
Employee must execute an agreement explaining the terms and conditions, including repayment requirements. The repayment shall be based on the following formula:
Pro-rated Monthly Amount = Amount of Sign-On / Employment Commitment Period / Period of Consecutive Service in Months

Example

Employee received a $5,000 sign-on bonus for 2-year employment commitment, with a first installment of $2.500 at sign-on and a second installment of $2,500 six months later, but the employee leaves after eight months.

$5,000 Sign-On Bonus Received / 24 Month Period of employment commitment = $208.33 Prorated Monthly Amount

$208.33 x (24 months – 8 months) = $3,333.28 Amount Owed

Exemptions from Repayment
An employee does not need to repay any amount of a bonus if the employee's termination of employment was due to death or severe illness resulting in permanent disability of the employee, separation because employee was unable to perform all the position's essential duties because of a medical condition; elimination of the employee's position; or a reduction in force (RIF).

Description : Function Description: Directs, coordinates, implements and plans distribution activities that provide electric and/or gas service to customers, including operation, line construction and/or maintenance. Discipline Description: Calculates and controls the flow of natural gas through the system to maintain volume and pressure for adequate supply. Monitors telemetric instruments to determine gas pressure, volume and consumption. Reviews supply and demand data such as gas quality, pressure, weather conditions and time of day to forecast load adjustment. Career Level description: Band: Provides leadership and direction through Senior Managers and Managers. Has accountability for the performance and results of: A large, strategically important discipline in an extremely large market; and/or. Related disciplines or a medium-sized function in a large market or medium-sized division; and/or. A medium-sized discipline or department in a major region. Adapts and executes functional or departmental business plans and contributes to the development of functional or departmental strategies. Decisions are guided by functional or major operational segment strategies and priorities.

Data Cut: 2018 WTW Energy Services Middle Management, Professional & Support Survey - United States - Org Wtd

Description : Function Description: Performs engineering work in operations, production, construction or maintenance environments. Designs and scales up manufacturing processes, instruments and equipment and tests manufactured products to maintain quality. Plans, designs and estimates time and cost and oversees construction and maintenance of structures, facilities, systems and components. Analyzes and develops solutions to engineering problems related to manufacturing equipment and systems or the causes of component failures. Develops and applies engineering standards and procedures and provides advice on issues within the engineering field. Discipline Description: Develops, implements and monitors engineering applications, processes and services associated with the performance of all coordinated operations responsibilities assigned to the Independent Coordinator of Transmission (ICT) to prevent power outages and maintain reliable electric service. Requests and collects information, prepares and validates data and executes computer runs for current, next-day and other operational assessments of the transmission network to support coordination and approval of generation and transmission maintenance outage requests and to comply with external standards and requirements, including reporting for market participants, government entities and legal. Participates in identification of issues and researches, analyzes and resolves disputes and inquires relating to market and grid operations data. Develops and periodically updates network model data as necessary for the Interchange Distribution Calculator (IDC) load flow model. Develops, maintains and supports coordinated operations applications, processes and documentation. Identifies opportunities for improved analyses of electric system operations data and prioritizes, develops and implements improvements, including automated tools for monitoring and reporting operations data. Career Level description: Band: Has working knowledge and experience in own discipline. Continues to build knowledge of the organization, processes and customers. Performs a range of mainly straightforward assignments. Uses prescribed guidelines or policies to analyze and resolve problems. Receives a moderate level of guidance and direction.

Analyzes and develops solutions to engineering problems related to manufacturing equipment and systems or the causes of component failures. Develops and applies engineering standards and procedures and provides advice on issues within the engineering field. Discipline Description: Plans and implements the design, manufacture, installation and/or maintenance of electrical systems and apparatus, such as electric motors, machinery controls, lighting, wiring and power systems/devices, for the generation, transmission and control of electric power. Career Level description: Band: Has working knowledge and experience in own discipline. Continues to build knowledge of the organization, processes and customers. Performs a range of mainly straightforward assignments. Uses prescribed guidelines or policies to analyze and resolve problems. Receives a moderate level of guidance and direction.

Description : Positions in this sub-family are responsible for performing engineering technician para-professional work to support/assist engineers in the organization. This sub-family captures various types of technicians, regardless of their area of specialization. Technicians who work in an Engineering discipline, or a related Engineering trade, but that do not possess the formal educational and experience requirements of a certified Engineer should be matched to this sub-family. A Senior Para-Professional (S3) requires broad knowledge of operational procedures and tools obtained through extensive work experience and may require vocational or technical education. May require the following proficiency: Works under limited supervision for routine situations. Provides assistance and training to lower level employees. Problems typically are not routine and require analysis to understand.

Description : Function Description: Performs supply chain and logistics functions, which may include, but are not limited to, material procurement, production planning, inventory control, outsourcing, vendor selection and distribution. Creates integrated processes among internal functions such as operations, purchasing and logistics, and outside suppliers. Focuses resources on continuous improvement of the movement of materials through various production processes and establishes key performance metrics and benchmarks relating to supply chain planning/forecasting to measure actual performance against goals on a regular basis. Promotes alignment by understanding and communicating customer needs and requirements throughout the organization. Discipline Description: Administers and operates the organization's warehouses, including processing, packaging and storage of supplies, materials and equipment. Accounts for all materials and supplies in the stores facilities; audits goods received into warehouse. Oversees receipt, storage and shipment of materials, and related reporting in accordance with established procedures. Prepares and coordinates schedules for shipping and receiving materials to control the flow of goods and regulate warehouse space. Ensures the effectiveness of operating procedures, space utilization, and maintenance and protection of facilities and equipment. Career Level description: Band: Has advanced skills, typically gained through a combination of job-related training and considerable work experience. May act as a lead, coordinating the work of others, but is not a supervisor. Works autonomously within established procedures and practices. Has developed a specialized level of skill to perform assigned tasks.

Survey: WTW Energy Services Middle Management, Professional & Support Survey - United States - Org Wtd

Scope: Total Sample

Data Cut: 2018 WTW Energy Services Middle Management, Professional & Support Survey - United States - Org Wtd

Description : Function Description: Performs supply chain and logistics functions, which may include, but are not limited to, material procurement, production planning, inventory control, outsourcing, vendor selection and distribution. Creates integrated processes among internal functions such as operations, purchasing and logistics, and outside suppliers. Focuses resources on continuous improvement of the movement of materials through various production processes and establishes key performance metrics and benchmarks relating to supply chain planning/forecasting to measure actual performance against goals on a regular basis. Promotes alignment by understanding and communicating customer needs and requirements throughout the organization. Discipline Description: Administers and operates the organization's warehouses, including processing, packaging and storage of supplies, materials and equipment. Accounts for all materials and supplies in the stores facilities; audits goods received into warehouse. Oversees receipt, storage and shipment of materials, and related reporting in accordance with established procedures. Prepares and coordinates schedules for shipping and receiving materials to control the flow of goods and regulate warehouse space. Ensures the effectiveness of operating procedures, space utilization, and maintenance and protection of facilities and equipment. Career Level description: Band: Has advanced skills, typically gained through a combination of job-related training and considerable work experience. May act as a lead, coordinating the work of others, but is not a supervisor. Works autonomously within established procedures and practices. Has developed a specialized level of skill to perform assigned tasks.

Description : Function Description: Directs, coordinates, implements and plans distribution activities that provide electric and/or gas service to customers, including operation, line construction and/or maintenance. Discipline Description: Constructs, removes and maintains gas distribution facilities and equipment, including pipe, gauges and valves. May be responsible for field engineering and/or operating activities. Coordinates, schedules and supervises crews engaged in the construction, removal and maintenance of facilities and equipment for gas distribution. Dispatches field crews engaged in the construction, maintenance and emergency restoration of gas service. Responsibilities may be limited to an assigned district or area. Career Level description: Band: Has advanced and specialized expertise, typically developed through a combination of job-related training and considerable work experience. Proposes improvements to processes. May act as a lead, coordinating and facilitating the work of others but is not a supervisor. Works autonomously within established procedures and practices. Spends a majority of working time performing the same work processes and activities as employees on team.

Description : IT Data/Voice Network Administration work focuses on planning the network implementation, determining physical and logical layouts, installing, configuring, and maintaining ICT data and voice networks including: Meeting end user needs by ensuring the uptime, performance, resource availability, and security of the networks managed within established budgets and operational guidelines. Determining and diagramming the physical layout which illustrates the physical location of and the connections between devices participating on the network. Determining and diagramming the logical layout which documents the communication protocols (e.g., IP, TCP, POP3, etc.) and type of service/application (email, file transfer, web browsing, etc.) for each segment of the network. Automating routine tasks using scripting and writing basic computer programs to address more complex systems software configuration and enhancement Level: An Experienced Para-Professional (S2) requires basic knowledge of job procedures and tools obtained through work experience and may require vocational or technical education. May require the following proficiency: Works under moderate supervision. Problems are typically of a routine nature, but may at times require interpretation or deviation from standard procedures. Communicates information that requires some explanation or interpretation. Typical Title: IT Data/Voice Network Administration Assistant.

Survey: WTW Energy Services Middle Management, Professional & Support Survey - United States - Org Wtd

Scope: Industry Group: Energy Services and Utilities

Data Cut: 2018 WTW Energy Services Middle Management, Professional & Support Survey - United States - Org Wtd

Description : Function Description: Plans, monitors and manages internal projects from initiation through completion. Secures required resources and uses formal processes and tools to manage resources, budgets, risks and changes. Manages projects to ensure on-time completion according to specifications and within budgeted costs. At the higher levels, incumbents manage large multifaceted projects; at lower levels, incumbents may be concerned with clearly identifiable elements or functions within a larger project. Typically incumbents matched to this function are working towards or have achieved certification in project management. Discipline Description: Plans, monitors and manages internal projects from initiation through completion. Leads or coordinates project planning, resourcing, staffing, supply and subcontract management, progress reporting, troubleshooting and people management. Ensures project results meet requirements regarding technical quality, reliability, schedule and cost. Monitors performance and recommends schedule changes, cost adjustments or resource additions. Responsibilities are within the Project/Program Management Function as a generalist or in a combination of Disciplines. Career Level description: Band: Has in-depth knowledge in own discipline and basic knowledge of related disciplines. Solves complex problems; takes a new perspective on existing solutions. Works independently; receives minimal guidance. May lead projects or project steps within a broader project or have accountability for ongoing activities or objectives. Acts as a resource for colleagues with less experience. May represent the level at which career may stabilize for many years or even until retirement.

Description : Function Description: Manages the Information Technology (IT) infrastructure within an organization, including the physical network (e.g., LANs/ WANs, servers, terminals) as well as server applications and software (e.g., PeopleSoft, Oracle). Configures, installs, maintains and upgrades server applications and hardware. Discipline Description: Administers database utilities, monitors the relationships between the database users and applications, and maintains the organization's databases across multiple platforms and computing environments. Applies understanding of relational database concepts and query languages in order to design required summary or aggregation tables to support analyses. Collaborates with technology/infrastructure staff to identify data relationships and functional requirements; analyzes and resolves issues related to information flow and content. Maintains database support tools, database tables and dictionaries and recovery and back-up procedures. Performs data modeling studies and develops detailed data models; maintains data model and entity relationship diagrams. Career Level description: Band: Has full proficiency in a range of technical processes or procedures (or deep skills in a single area) through job-related training and considerable work experience. Completes a variety of atypical assignments. Works within defined technical processes and procedures or methodologies and may help determine the appropriate approach for new assignments. Works with a limited degree of supervision, with oversight focused only on complex new assignments. Acts as an informal resource for colleagues with less experience.

FPUC's Response to Staff's Twentieth Data Request (Nos. 1-17)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTIETH SET OF DATA REQUESTS

1. Please refer to MFR Schedule B-13, page 3, line numbers 15, and 21 through 28 for the following questions.

a) For purposes of clarity, please list the total estimated cost for each project. If this amount differs from the amount provided in column (4) of this schedule, please explain why for each.

b) For each project, please indicate if an economic analysis, such as a cumulative present value revenue requirement analysis or other cost-effectiveness analysis, was completed. If so, please provide the results of the analysis. If not, please explain why.

Company Response:

a. The total amount on line 15 should have been $2,700,000. The CWIP balance as of November 2025, which was $1,500,000, was inadvertently recorded in MFR B-13 instead of the estimated amount projected to be closed in December 2025 of $2,700,000.

The total amount on line 21 was correctly recorded at $720,000 for 5 replacements.

The total amount on line 28 of $500,000 was the amount budgeted and included in the filing. The estimate provided in Data Request 6 item 12 for this item of $750,000 is a more recent estimate.

b. These projects are being performed for system reliability purposes in order to provide for safe and reliable electric service as the existing equipment is nearing the end of life expectancy. Given that reliability is a major priority for the Company and likewise important to our customers, a cost-effectiveness analysis was deemed irrelevant in this context.

2. Please refer to MFR Schedule C-7(2025), page 1, lines 8 through 27, page 3, lines 68 through 71, and page 5, lines 72 through 84. Please provide a general explanation of how FPUC typically estimates projected transmission and distribution O&M expenses.

Company Response:

Interviews are conducted on a department by department basis with each department manager, typically between the May – July time frame, to assess and evaluate the future cost projections and to establish the budget for the upcoming year. We typically use the actuals for the preceding 12-months ending in May as the starting point, apply a grossed up factor, and then the respective department managers make additional adjustments based on any known changes, historical outliers, etc.

3. Please refer to MFR Schedule C-7(2025), page 3, lines 68 through 71, and page 5, lines 72 through 84. Please provide a brief description of what is included in the costs for each of the transmission and distribution maintenance categories.

Company Response:

Please refer to the attached file "DR 20.3 Summary of Maintenance Expenses".

4. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 1 for the following questions.

a) Regarding the blanket projects, please indicate if the Commission has previously approved similar projects for FPUC. If so, please identify the Commission order(s) approving those projects.

b) Regarding the replacements of NW Florida substations, please identify the typical service life and the current age of the assets to be replaced.

Company Response:

a. **Blanket projects were included in the forecast of plant additions in the Company's last natural gas rate case, Docket No. 20220067-GU. Also, please note that the response to DR 6.4 and DR 6.14 net rate base amount of $8,373,855.39 included net plant for blankets in 2024 of $5,883,947. As of November 2024, actual costs of $6,270,123 have already been charged to these work orders. Blanket work orders are a normal rate base cost incurred by the Company.**

b. **Given that these are not currently FPUC assets, a visual inspection was done to evaluate the age of the transformers. Base on that inspection, it appear that there are four transformers that are 58 years old, and one transformer that is 17 years old. The average service life of distribution substation equipment based on information from FPUC and other IOUs in Florida indicates a range of useful life of 45 to 60 years. The exact age of the other equipment can't be determined visually and will require additional information to accurately determine the age of the equipment. Other information such as previous and current equipment test results are needed to verify the actual condition of the equipment. This information, along with the age, will feed into the final determination on when it is best to replace the equipment. Since actual age and testing information has not been made available at this time, it**

was necessary to make some assumptions based on visual information and substation design on what upgrades and redesign may be necessary going forward. Based on these assumptions, we developed some preliminary construction designs to address the upgrades and redesign of the substations, which will be confirmed when additional information becomes available.

5. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 2. For each project listed below, please explain why the total cost provided in the associated Excel file response differs from the value provided for the test year on MFR Schedule B-11.

   a) AIP Substation.

   b) JL Terry Substation.

Company Response:

The higher costs provided in the response to Staff's Sixth Set of Data Requests, No. 2 for both AIP Substation and JL Terry substation, are based on the most recent estimate updates and, are therefore, more accurate than the original projection. Both files provided in the data request show the total amount of costs that are projected to be closed to plant in 2025.

6. Please refer to FPUC's responses to Staff's Sixth Set of Data Requests, Nos. 2 and 12. For each of the projects that include contingency costs, please explain how these amounts were determined. As part of this response, please identify the percentage of the overall project cost that the contingency cost amounts to for each project.

Company Response:

Below are listed the projects in which contingency cost was included in the project cost

estimate. Contingency costs are an estimate that is based on the confidence level of the overall cost estimate.

- **AIP Substation – $629,000 contingency cost for approximately 10% of total cost.**
- **Step Down Substation Upgrades - $100,000 contingency cost for approximately 3.1% of total cost.**
- **Transformer at JLT - $100,000 contingency cost for approximately 4.3% of total cost.**
- **Refurbish NW FL Substations - $310,000 contingency cost for approximately 4.8% of total cost.**
- **Install 69 KV UG Cable and 69 KV Switches - $50,000 contingency cost for approximately 6.6% of total cost.**
- **The total contingency cost percentage included in all projects is approximately 3.1%.**

7. Please refer to FPUC's responses to Staff's Sixth Set of Data Requests, Nos. 2 and 22(b). Regarding the purchase of NW Florida substations project, please indicate if the final purchase contract has been completed. If so, please provide the contracted purchase price for each of the listed substation assets.

Company Response:

We are currently finalizing the final purchase contract with FPL for the NW Florida substations.

8. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 5. Please describe FPUC's established purchasing guidelines for purchases or services below the O&M and capital amounts in Chesapeake Utilities Corporation's purchase policy.

Company Response:

E1232

Please refer to the attached file "DR 20.8 CHPK_Approved Purchasing Methods.docx".

9. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 7. Regarding the purchase of NW Florida Substations project, please provide the results of the analyses conducted for the alternatives listed. As part of this response, please provide a cost comparison between the total cost of purchasing the NW Florida substation assets and the total cost associated with each identified alternative.

Company Response:

The primary alternative considered was to construct five new substations as opposed to purchasing the substation assets from FPL. Although there was no detailed cost analysis completed, we did have the cost to rebuild the AIP Substation, which is included in this rate proceeding in the amount of $6,300,000. Not included in this estimate was the cost of two substation transformers which are being reused and no land cost since the land is currently owned by FPUC. These additions could have pushed the cost closer to $7,500,000 for one new substation. With the need for five substations the total cost could have been $30,000,000 compared to the initial estimate for purchasing FPL assets and upgrades, which are around $11,400,000. Please refer to the attached file "DR 20.9" for the cost/benefit analysis.

10. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 11 for the following questions.

a) Regarding the Self Healing project, please indicate how often FPUC typically experiences energy supply interruptions. As part of this response, please provide examples of instances when this project would be utilized.

b) Regarding the SD Substation 69 KV Loop and Switch project, please explain why backup transmission service to the substations on Amelia Island is necessary, and detail the modifications to the Step Down Substation that would occur. As part of this response, please indicate whether or not other backup transmission service is currently available to the substations on Amelia Island.

Company Response:

a. **A review of the reliability indicators shows that the SAIDI, CAIDI and SAIFI results have been extremely variable through the years. When comparing 2022 to 2023, you will notice a slight improvement. However, when compared to the other large IOU's, the FPUC reliability indicators do not compare favorably, which to some degree may be related to the significant size difference of the companies. The indices are impacted the most dramatically when large sections, such as an entire distribution feeder, are tripped off line due to an issue such as a tree on the line, car hitting pole, etc. With the self-healing technology projects, the approximate location of the issue can be determined and then line switches can be automatically opened or closed to restore power to a portion of the customers. This allows the bulk of the customers to have service restored with only the impacted section to remain off line until personnel are dispatched to restore power. Currently, the entire feeder would remain out of service until personnel can be contacted, travel to the location, determine the issue, and perform switching operations in an effort to get most of the customers back in service.**

b. **It is good utility practice to have back up transmission service to most substations in order to keep substations energized when one of the transmission lines is out of service or when maintenance work is necessary on the line. Unlike distribution lines**

that can be worked while still energized, FPUC does not have the ability to work on transmission lines while still energized. If there are not at least two transmission lines feeding a substation, maintenance activities would require the substation to be deenergized which would impact all customers served from that substation. Having the back up transmission line allows more reliability, allows maintenance to be performed without impact to customers, and provides for an improvement to the reliability indicators. The backup lines must also have connections to the substations on each end of the line to be the most effective. Work at the Step-Down substation would involve the installation of additional busses and switches that are necessary to connect the additional backup transmission line into the substation.

11. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 12 for the following questions.

a) Multiple projects include "Labor – ES&I" in the sheet titled "COST" and under the "Breakdown of Job Costs" category. Please define "ES&I".

b) For the SD Substation 69 KV Loop and Switch and Substation Upgrades projects, please explain why the total cost provided in the associated Excel file response for each project differs from the value provided on MFR Schedule B-13, column (4).

c) Regarding the Substation Upgrades project, please identify what percentage of the costs provided in the DR 6.12 Stepdown Cost and DR 6.12 Bypass Loop Excel files are included in MFR Schedule B-13, column (4), for each.

d) For purposes of clarity, please provide the total estimated cost for the manhole project.

Company Response:

a. **"Labor – ES&I" is the support from contractors for Engineering, Supervision and Inspection.**

b. **The $750,000 estimate for the 69KV cable and switches was projected to be done over two years, with $250,000 being closed in December 2024 and $500,000 being closed in May 2025. Since MFR B-13 only related to the 2025 projected test year, only the 2025 portion of the project was included as the total project balance.**

c. **The two files provided in Staff's Data Request 6, number 12, represent the total for both the 2024 and 2025 projected costs. Estimated costs for 2025 were $1 million. Since these costs were estimated closing quarterly, MFR B-13 column (4) should have shown the $250,000 projected cost for the last quarter.**

d. **The total estimated cost for manholes for 2025 was $400,000.**

12. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 18. For each of the projects listed below, please explain in detail how denial of each project will have a direct negative impact on the reliability of FPUC's electric system.

a) Self Healing Project.

b) SD Substation 69 KV Loop and Switch.

c) Substation Upgrades.

d) Minor Projects.

Company Response:

a. **Please refer to the response to 10a above.**

b. **Please refer to the response to 10b above.**

c. **As with any equipment, workload and aging eventually result in the reduction of**

E1236

reliability, which is the same for substation equipment. Within the substation's design, there is some level of redundancy which allows short term emergencies, that are caused by equipment failure, to be manageable. However, most substation equipment has long lead times when purchasing the equipment, which creates the possibility of a second failure causing a significant event that may result in a large, extended outage. With continued maintenance and testing, the life of the equipment can be extended but it is still necessary to make a determination of when it is time to replace the equipment rather than be forced into the replacement.

d. The Endeavor project is needed to upgrade facilities, at a location that has extremely antiquated equipment, in order to support the load requirements in that area. The substation voltage regulators, electronic reclosers and removal of manholes is also similar to what is mentioned in 12(c) above. This equipment has been in service for a number of years handling the workload and needs to be replaced prior to failure while still in service. Getting this replacement equipment takes time and should not wait until it is too late.

13. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 22(b). Regarding the purchase of NW Florida Substations project, please explain why the estimated cost of $4.2 million differs from the estimated cost of $4.9 million as provided in MFR Schedule B-11 for the test year, and MFR Schedule B-13, column (4), for this project.

Company Response:

The $4,900,000 shown in MFR B-11 and B-13 consisted of both the purchase price of $4,200,000 and $700,000 for additional work to connect the substations to our system.

14. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 23(i). Please explain why the total cost provided in the Excel file response for the NW Florida IMC Technician differs from the value provided for this position on MFR Schedule C-7 (2024, 2025), page 7.

Company Response:

The total costs in the file support for Staff's Sixth Set of Data Requests No. 23 for NW Florida with the account number 582 in column C total $194,500. Since this amount was based on 2024 costs, the costs were increased by $582 or 3% to get to the amount shown in MFR C-7 page 7 for account 582 for 2025. The 3% was estimated at a composite between payroll times growth and inflation times growth.

15. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 23(m). Please list the procedures FPUC is attempting to comply with as it relates to the replacement of aging equipment and rebuilds of the AIP and JL Terry substations.

Company Response:

FPUC is registered with NERC and SERC/FRCC as a Transmission Owner and Distribution Provider, which places certain responsibilities on FPUC related to electric substations. NERC standard PRC-005-6 – Protection System, Automatic Reclosing and Sudden Pressure Relaying Maintenance is applicable to Transmission Owners and Distribution Providers. Within this standard, the Company must identify "Requirements and Measures" that will be followed to ensure "Compliance" with this standard. As the substation equipment ages, it becomes much more difficult to have the equipment meet all the testing requirements within the standard and must be replaced. This standard must

be complied with in order to avoid financial penalties enforced by NERC and to ensure reliable electric service to customers.

16. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 24(a). For purposes of clarity, please identify the substation to be rebuilt referenced in the direct testimony of witness Haffecke, page 16, lines 14 through 17.

Company Response:

The statement "the rebuild of an existing substation" on line 16 is in reference to the rebuild of the AIP substation and work at both the Step Down and JL Terry substations.

17. Please refer to FPUC's response to Staff's Sixth Set of Data Requests, No. 27(c). Please provide a salary breakdown for each line supervisor position similar to the format provided in the Microsoft Excel file titled "DR 6.6 GM450 engineering increase".

Company Response:

Please refer to the attached file "DR 20.17 Line Operation Supervisors".

Policy #:	
Effective Date:	
Revision #:	1

1. Policy Summary	
Title	Approved Purchasing Methods
Version / Date	July 13, 2022
Audience	All employees of Chesapeake Utilities Corporation and its Subsidiaries
Risks Addressed	Using unauthorized methods for purchasing leading to potential fraud, operational, or reputational loss
Procedure Location and Owner	Procurement is the Owner of this Policy. The policy is located on the Procurement SharePoint Site.

2. Purpose

This policy defines and outlines all approved purchasing methods for securing goods and services on behalf of the Company, unless superseded by those established by a governing regulator agency. This policy is effective January 1, 2021 and will be socialized throughout the organization. Upon the policy being socialized and mature, the Procurement Team will continue to inform and answer questions about the policy to all employees at that point.

3. Scope	
In Scope:	This policy applies to all persons involved in the purchase of goods or services for the Company or otherwise required to conduct business.
Out of Scope:	Energy commodities/cost of gas

909 Silver Lake Boulevard, Dover, DE 19904 | 302.734.6799 | Fax: 302.734.6750 | www.chpk.com

4. Mandatory Requirements

Role	Responsibility
VP Treasurer/Controller	• Approving changes to this policy • Resolving conflicts that may arise in the application of this policy
Procurement Team	• Acting as a partner during the competitive bidding process • Maintaining and managing this policy • NOTE: The Procurement Team may be engaged throughout the other related processes, such as purchase requisitions, vendor set up, contract negotiations, etc., which are out of scope for this Policy
Business Units and Corporate Departments	• Submitting notification to the Procurement Team when non-approved purchasing methods are used

Approved Purchasing Methods
All procurement requests and transactions must occur using one of six approved purchasing methods, as listed below:

- Negotiated Agreements or Contracts
- Competitive Bidding Process, unless approved via Sole Source
- Purchase Requisition (PR) or Purchase Order (PO) Process
- Company Purchasing Cards (P-Cards)
- Corporate Travel Card (Travel and Expense Only)
- Personal Re-imbursement

For additional information about Petty Cash or Imprest Checks, see the appropriate policy.

Employees who desire to purchase goods/services utilizing a method other than one of the methods listed above must receive approval from the Procurement Team.

All procurement transactions require a Non-Disclosure Agreement (NDA) to be signed when confidential information is shared from Chesapeake Utilities Corporation to the vendor.

The table below provides an overview of each purchasing method and additional requirements that must be followed when purchasing, with the exception of Travel and Expense purchases.

E1247

	Total Cost of Ownership/Transaction Value		
Purchasing Requirement	**Less than $10,000**	**Between $10,000 and $250,000**	**Equal to or $250,000 OpEx or Greater than $1,000,000 Capital**
Purchase Method	Purchasing Card or PR/PO Process	PR/PO Process or Competitive Bid	Competitive Bid
Engagement of the Procurement Team	✗	✗	✓
Approval Required Prior to Purchase	✗	✗	✓
Competitive Bid	✗	✗	✓
Contract Required	✗	✗	✓
Non-Disclosure Agreement If Required (Legal Department)	✓	✓	✓
Vendor Setup Required – Purchasing Cards	✗	✗	N/A
Vendor Setup Required – PR/PO	✓	✓	✓
Receipt Submission Required	Required >= $75 for personal credit cards and >= $75 for Purchasing Card	✓	✓

Transaction value is determined based on the lesser of total contract spend or Total Cost of Ownership (TCO) for a year after the initial purchase. Stringing or splitting a purchase into two or more smaller transactions to intentionally circumvent this policy and the use of a higher level purchase method requirement is strictly forbidden.

909 Silver Lake Boulevard, Dover, DE 19904 | 302.734.6799 | Fax: 302.734.6750 | www.chpk.com

5. Policy Governance & Compliance

At the point this policy is completely socialized and adopted throughout the organization, any individual found in violation of this Policy could be subject to discipline, up to and including termination. Any exceptions to this Policy must be approved, in writing, by the Vice President/Controller.

FPUC's Response to Staff's Twenty First Data Request (Nos. 1-8)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTY FIRST SET OF DATA REQUESTS

1. Please refer to FPUC's response to Staff's Fourth Set of Data Requests, Question No. 10, Excel file titled, "DR 4.1 Weather Normalization Forecasts(35111451.1)," tab "NE Hist Data – MFR." Please state whether the Company agrees that staff's calculations shown in the table, listed on the following page, accurately depict FPUC's average annual residential customers and resulting growth rates for the Northeast service territory. If not, please explain why not.

	NE Residential Customers (12 mo. Avg.)	Percent Growth (Y/O/Y)	Average Historical Growth (2016-2023)
2015	13,910	-	
2016	14,091	1.31%	
2017	14,322	1.64%	
2018	14,518	1.37%	
2019	14,806	1.99%	
2020	15,188	2.58%	
2021	15,343	1.02%	
2022	15,440	0.63%	
2023	15,599	1.03%	1.44%
2024*	15,645	0.30%	
2025**	15,690	0.29%	

*Includes 4 months of actual data and 8 months of forecasted data
**Test Year

Company Response:

The Company agrees with the mathematics of the calculation based on the monthly data.

2. If the Company's answer to Question No. 1 is affirmative, please reference the table

above and explain why FPUC's 2024 and 2025 residential customer growth projections for the NE service area are lower than any other year in the historical period as well as substantially lower than the average growth rate experienced from 2016-2023.

Company Response:

The Company's NE service area is on Amelia Island which is substantially built out. While developers are still finding some land to develop, the size and frequency are far less than the historical norm. This has translated into lower-than-average growth projections for FPUC's NE service area. This is supported by a review of the number of recently completed Residential building permits for the City of Fernandina Beach, which is the primary municipality on Amelia Island. The number of completed building permits has been steadily declining since 2019.

Residential Building Permits[1]

Year Permit Issued	Completed
2019	159
2020	120
2021	128
2022	123
2023	55
2024	11

3. Please refer to FPUC's response to Staff's Fourth Set of Data Requests, Question No. 2(c). FPUC states that customer growth for the Northeast Residential class was

[1] City of Fernandina Beach, FL, *Citizen Self Service – Online Portal for Permits, Plans, Municipal Code Complaints and Inspections* (https://egselfservice.fbfl.us/EnerGovProd/SelfService#/search).

estimated to be 0.1 percent per month, which would equate to approximately 1.2 percent growth annually. Since FPUC's forecasted annual growth rate for the Northeast Residential class was 0.29 percent, please explain the apparent contradiction between these growth figures.

Company Response:

The Company's response to Staff's Fourth Set of Data Requests, Question No. 2(c) did not intend to imply that the growth rate for the NE Residential class is estimated to be 0.10 percent per month. Months May through December 2024 are forecast to be 0.10 percent higher than the average monthly Residential customers in 2023 and then adjusted by a seasonality factor, as customer numbers are seasonal. The calculation would have produced an annual average growth rate of 0.10 percent, not 1.2 percent, for 2024, had January through April not been actual. Because January through April 2024 were actuals, the calculated 2024 average annual growth rate was 0.30 percent. The underlying growth rate for 2025 is approximately 0.30 percent over 2024, and then adjusted by a seasonality factor.

4. Please refer to FPUC's response to Staff's Fourth Set of Data Requests, Question No. 10, Excel file titled, "DR 4.1 Weather Normalization Forecasts(35111451.1), tabs "Northeast Forecast Detail" and "Northwest Forecast Detail." Please explain the cause(s) for the relatively high error rates between actuals and forecasts for the following:

- NE Residential UPC – June 2024 (11.7%)
- NE Commercial Small UPC – June 2024 (14.1%)
- NE Commercial UPC – June 2024 (13.3%)
- NW Residential UPC – August 2024 (11.7%)

Company Response:

The likely primary cause of NE Residential, Commercial Small and Commercial UPC being above normal (forecast) in June 2024 is that May and June 2024 in Jacksonville were warmer (higher Cooling Degree Days) than normal. For example, the warmer weather in May and June 2024 implied that NE Residential UPC should have been 18.2% above normal. The difference between 18.2% and the observed 14.7% is due to regression error (i.e.; the NE Residential UPC for June 2024 was 14.7% above normal, not 11.7% as indicated in the question). July and August 2024 in Tallahassee were also warmer than normal, likely contributing to August 2024 NW Residential UPC being above normal. Regression analysis is a statistical exercise and contains a level of error. Even if actual weather is exactly normal, the actual UPC is unlikely to be exactly the normal value of UPC indicated by the regressions.

5. Please refer to Page 7, Line 23 of witness Taylor's Direct Testimony, where it appears there is a word or phase omitted after the word "during." Please amend.

Company Response:

The text omitted after "during" on Page 7, Line 23 of witness Taylor's Direct Testimony is "2025".

6. Please refer to FPUC's response to Staff's Fourth Set of Data Requests, Question No. 2(e). Please identify and provide the data that the utility relied upon in its determination that electricity demand is relatively price inelastic in the short term.

Company Response:

It is generally accepted that electricity demand is relatively price inelastic in the short term, and numerous research studies support this conclusion. Data was not used or

evaluated in developing this conclusion. Two research studies that support the conclusion that electricity demand in inelastic in price in the short term are:

***Price Elasticity for Energy Use in Buildings in the United States*, U.S. Energy Information Administration, January 2021.**

***The price elasticity of electricity demand in the United States: A three-dimensional analysis*, Paul J. Burke and Ashani Abayasekara, Center for Applied Macroeconomic Analysis, Australia National University, August 2017.**

7. Please provide the company's monthly residential price (at 1000 kwh or average usage - please specify) for the period January 2015 to December 2025 – historic and forecasted, with forecasted prices based on FPUC's proposed base rates, beginning April 2025 and approved clause rates beginning Jan 2025.

Company Response:

Please refer to the attached file "DR 21.7 Jan 2015 to Dec 2025 Monthly Res Price" which shows the typical bill in 2025 to be lower than in 2023 and 2024. In 2026, this bill will be lowered by an additional $12.80 since the Hurricane Michael costs will be fully amortized.

8. Please refer to FPUC's response to Staff's Fourth Set of Data Requests, Question No. 12, Excel file titled, "DR 4.1 Weather Normalization Forecasts (35111451.1)."

a) Referring to the tabs titled "NW - Residential," "NW – Commercial Small," and "NW – Commercial," please explain why the fit lines and error rates were omitted for the time period January 2015 to December 2018 for these UPC models, reducing each model to 64 observations.

b) Referring to the tab titled "NE – Commercial Small," please explain why this UPC model omits January 2015 – December 2019, reducing the model to 52 observations.

c) Referring to the tab titled "NW – Residential," please explain the (963) kwh UPC data point entry for November 2018.

d) Referring to the tab titled "NW Hist Data – MFR," under the Residential billed column, the data point entry for November 2018 is a negative (9,593,612) kwh. Please explain how this negative data point entry is possible. Please also explain how the data point entry for December 2018 is 23,464,792 kwh which is significantly higher than any other month, historical and forecasted. Please also explain in detail how the data points for these two successive months vastly differ.

For the Northwest service territory, if the historical data for the months of October 2018, November 2018, and December 2018 were influenced or distorted greatly by the effects of Hurricane Michael, please explain whether FPUC considered other modelling options to represent those three months in the UPC models (e.g. binary variables, data adjustments, etc), as an alternative to omitting all data point entries for the months prior to and surrounding Hurricane Michael (January 2015 – December 2018).

Company Response:

a) **The fit lines and errors in the regression analysis in tabs "NW - Residential," "NW – Commercial Small," and "NW – Commercial," for the time period January 2015 to December 2018 were not omitted; they were simply not calculated because the regression analysis started in January 2019.**

b) **Only data starting in January 2020 was used in the regression analysis, as this period more accurately reflects current Use Per Customer (UPC) behavior than data prior to January 2020. The 52 monthly observations from January 2020 to April 2024 is sufficient to perform a statistically valid and significant regression analysis.**

c) **The (963) kWh UPC data point entry for November 2018 on the "NW _Residential" tab is due to billing disruptions caused by Hurricane Michael. This data point was not used in the analysis.**

d) **The data for October, November and December 2018 in the "MW Hist Data – MFR" tab, including the Residential (9,593,612) data point in November 2018 and the Residential 23,464,792 data point in December 2018 is due to the disruptions caused by Hurricane Michael and adjustments/corrections in the FPUC billing system. This data was not used in the analysis.**

e) **The "distorted" data for the Months of October, November and December 2018 in the Northwest service area is due to Hurricane Michael. FPUC considered, but chose not to use, other modeling options for dealing with the distorted data. There was sufficient data after Hurricane Michael starting in January 2019, through April 2024, to perform a statistically valid and significant regression analysis.**

FPUC's Response to Staff's Twenty Second Data Request (Nos. 1-2)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTY SECOND SET OF DATA REQUESTS

1. Please refer to testimony of Florida Public Utilities Company (FPUC or Company) witness Napier, page 16, lines 5 through 8 for the following request:

   a) Please specify the total projected 2025 amount of economic development expense, exclusive of any sharing (i.e., total amount), contained in the Company's rate request.

   b) Please confirm the Company intends for its 2025 economic development expenditures to conform to the guidelines set forth in Rule 25-6.0426, Florida Administrative Code.

Company Response:

a) The total amount of economic development expense projected in 2025 is $19,055.

b) Yes, the Company intends the economic development expenditures to conform to the rule.

2. Please refer to Florida Public Utilities Company (Company or FPUC) Minimum Filing Requirements (MFR), Schedule C-35. Please provide this "Payroll and Fringe Benefit Increases Compared to CPI" schedule containing FPUC electric data, rather than Chesapeake/total company basis data.

Company Response:

This schedule was already provided as a response to Staff's Data Request 11 question 12. Please refer to file "DR 11.12 C-35 Electric", which is provided again for ease of reference.

FPUC's Response to Staff's Twenty Third Data Request (Nos. 1-4)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTY THIRD SET OF DATA REQUESTS

1. In response to staff's tenth data request, FPUC indicated it is still testing out the range of its proposed radio system. Please explain how the radio system will adequately cover FPUC's service territory. As part of your response, please explain what alternative communication systems were evaluated, if any.

Company Response:

As part of the project, FPUC commissioned and just recently received the completed radio propagation study to ensure reliable radio coverage would be available over the entire electrical service territory. Changes in the vendors organization created the delay which pushed back the completion date for this project. The actual geographical electric service territories were provided to the vendor and, based on the coverage necessary, radio repeaters and antennas will be placed at strategic locations to ensure adequate, reliable inbound and outbound communications from different types of devices. Prior to beginning this project to install radios, the company explored options using cell phone technology to provide communications in place of radios. Although cell phones do work well in most situations, cell phone service after severe storms has not worked effectively which is when the communications are needed the most. Additionally, there are times during certain operations where it is necessary to communicate information to a large group of personnel. In this situation, radios work well at doing this where cell phone use

during this type of activity was very difficult. The company also evaluated which type of radios worked most effectively electric operations where consideration for working during inclement weather is required.

2. On MFR Schedule B-13, page 4 of 87, FPUC budgeted $800,000 for the cost of the radio system. However, on page 15 and 16, line 10 of witness Haffecke's testimony, the cost of the radio system is $1.3M. Please identify the total cost of the radio system and provide an itemized breakdown of what is included in the total cost.

Company Response:

MFR B-13 was only related to the open projects that had a balance in construction work in progress in 2025. The $800,000 was the budgeted amount for the Northeast part of the system which was projected to be closed in 2025. There was a separate project forecast for the Northwest part of the system for $500,000 which was expected to be closed in December 2024. However, given the radio vendor's organization changes, this project will now be completed in the first quarter of 2025. The two projects total the $1.3 million. However, as mentioned in Item #1 above, the radio propagation study was just recently completed which will push completion of the project into the first quarter of 2025.

3. Please refer to witness Haffecke's testimony, page 16, lines 6 through 8 and MFR Schedule B-13, page 4 of 87, Radio system (line 33). For purposes of clarity, please explain if both project names used are associated with one project. If not, please explain the difference.

Company Response:

Internally, projects are usually named separately for the Northeast and Northwest divisions. In our forecast for the rate case, the radio projects were reported separately for each division with one closing in December 2024 and one in March 2025.

4. Please refer to the direct testimony of witness Napier testimony page 22, lines 14 through 18. Please provide the estimated storm reserve charge per 1,000 kWh with FPUC's requested storm accrual increase of $446,979.

Company Response:

The increase in storm reserve costs in the filing are incorporated into the base rate calculation based on the cost of service study. But, if these were included separately as a storm surcharge, the charge for a year per 1,000 kWh would be $0.7282 or $0.0607 per month.

FPUC's Response to Staff's Twenty Fourth Data Request (No. 1)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTY FOURTH SET OF DATA REQUESTS

1. Referring to response No. 12 in Staff's Third Data Request filed in October 2024, the response states that the large industrial standby tariff customer to be moved to the GSLD- 1 tariff has questions regarding the move and that the Company is working through the process of providing information to the customer. Please provide an update regarding the current status of the process of moving the customer to the GSLD-1 tariff and if the customer's concerns have been addressed.

Company Response:

There have been several conversations with the customer regarding the move from the Standby tariff to the GSLD-1 tariff as part of this rate proceeding. The GSLD-1 tariff will reduce the demand charge and provide a financial benefit to the customer. The customer is in favor of this change. At this time, we believe all the customer's outstanding questions regarding the GSLD-1 tariff have been answered.

83

FPUC's Response to Staff's Twenty Fifth Data Request (Nos. 1-2)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTY FIFTH SET OF DATA REQUESTS

1. Please refer to Florida Public Utilities Company's (FPUC or Company) Response to Staffs 19th Data Request, No. 21.

a) Please explain in detail how witness Crowley calculated the Earnings Per Share (EPS) growth rate and the Dividend Per Share (DPS) growth rate in the equation provided in the response.

b) Please explain the source from which he obtained the EPS growth rate and DPS growth rate and provide the calculations for each electric utility in each Exhibit NAC 16, 17 and 18.

c) Please explain how historical growth rates are reliable indicators of expected growth rates.

d) Please provide copies of the pertinent pages of any academic text, publications or studies that support using 5-year and 10-year trends of historical EPS, DPS, and Cash Flow per share as reliable estimates of future growth in earnings.

COMPANY RESPONSE:

1a. For years 2021 and 2022, the Earnings per Share growth rate used in the DCF analysis equals the ten-year average historical growth rate of Earnings per Share for each company. These were calculated by taking the average of two methods of

determining average growth. The first method, a "deterministic" growth rate is calculated as geometric growth rate of earnings over a 10-year period (nine annual growth periods). The deterministic measure of earnings growth is calculated as follows, where *i* represents "company i" and *y* represents the year:

$$\boldsymbol{Deterministic\ EPS\ Growth_i = [\frac{(Earnings_{i,y=10})}{(Earnings_{i,y=1})}]^{(\frac{1}{9})} - 1}$$

The "trend" growth rate reflects an arithmetic average growth rate, as follows:

$$\boldsymbol{Trend\ EPS\ Growth_i = \frac{1}{9} * \sum_{y=1}^{9}\left[\frac{Earnings_{i,y}}{Earnings_{i,y-1}} - 1\right]}$$

Thus, the average used in the DCF analysis for years 2021 and 2022 was:

$$\boldsymbol{Average\ EPS\ Growth = \frac{Deterministic\ EPS\ Growth + Trend\ EPS\ Growth}{2}}$$

Historical growth rates were used as proxies for expected growth rates for the 2021 and 2022 analysis because expected growth rates from 2021 and 2022 were not available from Zacks and Yahoo Finance at the time of the analysis.

For the year 2023, such calculations were not used as expected earnings growth rates were available via Zacks Investment Research and Yahoo Finance, which provide financial services. Thus, for 2023, the earnings growth rates were calculated as the average of the earnings growth expectations published by each organization.

1b. For Exhibits NAC-17 and NAC-18, company earnings per share data were obtained from Morningstar, Inc. The calculations used to determine the growth rates follow the formulas provided in response to (1a). For Exhibit NAC-16, earnings growth expectations were obtained from Zacks Investment Research and Yahoo Finance. As explained in response to (1a), the earnings growth rates for 2023 were calculated as the average of the earnings growth expectations published by each organization.

1c. Historical rates of earnings and dividend growth are considered reasonable estimates of near-term growth for stable firms. Electric and gas utilities generally exhibit stable earnings and dividend growth. Utilities understand that past growth rates are embedded in investor expectations for the future, and deliberately seek steady ongoing earnings performance, as reflected in year-over-year earnings growth, with the potential for acceleration. The increased pace of the macroeconomy, particularly for the Southeast region, coupled with increased electrification portends a highly positive contemporary outlook. While not perfect predictors of the future because of unforeseen economic events, historical growth rates in earnings and dividends serve as a benchmark and are a reasonable estimate of near-term earnings growth.

1d. Chapter 11 of New York University Professor Aswath Damodaran's textbook *Security Analysis for Investment and Corporate Finance* states:

> **"There are three basic ways of estimating growth for any firm. One is to look at the growth in a firm's past earnings – its historical growth rate. While this can be a useful input when valuing stable firms, there are both dangers and limitations in using this growth rate for high growth firms."[1]**

As stated in response to (1c), energy utilities are considered a highly stable sector, such that historical growth rates provide a reasonable approximation of near-term future growth rates.

[1] Text can be found online, here: https://pages.stern.nyu.edu/~adamodar/pdfiles/valn2ed/ch11.pdf

2. Please refer to the Excel worksheets provided in DR 19.4 attached to FPUC's Response to Staff's 19th Data Request, No. 19.

a) In the DCF_EL worksheet, please explain what "cash flow per share" represents.

b) In the DCF_EL worksheet, please explain why the expected growth rates for 2021 in column O, lines 78, 79, 81, 86, and 90 are all the same and have the same formula in the cell?

c) In the DCF_EL worksheet, please explain why the expected growth rates for 2022 in column O, lines 117, 118, 120, 125, and 129 are all the same and have the same formula in the cell?

d) In the DCF_EL worksheet, please provide the calculations for the growth rates in columns Y and Z from Zack's and Yahoo for each electric utility in rows 153 through 167. Please provide copies of the source documentation for which the estimates were obtained.

e) In the DCF_EL worksheet, please explain why the expected growth rates for 2023 in column O, lines 163 and 169 are the same have the same formula in the cells. Please explain why the expected growth rates for Northwestern Energy Corporation and Until Corporation do not reflect eh results in the table in Column T, Row 152, though Column AA, Row 152.

f) In the hidden worksheet "YCP", please explain from what time period the share prices for the Companies in the years 2021, 2022, and 2023, in Column X, Y, and Z are derived. That is, is it a singular daily price or an average of a particular time period?

g) In the hidden worksheet "T R," all of the data under the headings in Row 1 are hard coded in. Please provide an explanation of what this worksheet represents.

h) In the hidden worksheet "T R," the data under the header "Total Market" is apparently used to derive the estimated market return for the Capital Asset Pricing Model (CAPM) result. Please provide the source from were this data was obtained and provide copies of the information to support the data.

COMPANY RESPONSE:

2a. In this case, "Cash Flow per Share" reflects the free cash flow of each firm divided by the number of outstanding shares of common stock for that company. Free cash flow is a measure of profitability that excludes the non-cash expenses. Although the information is included in the spreadsheet, the Cash Flow per Share is not used in the DCF calculation. Our firm generally include cash flow within our general cost of capital analysis package primarily to highlight potential issues. Though less of a concern currently, our analyses have found utility share prices to be sensitive to internal cash, particularly for utilities engaged in large construction projections. Sensitivity to internal cash is not surprising in view of long-term history: on occasion, large construction expenditures have caused electric utilities to operate with negative internal cashflow.

2b. For some companies, the historical growth rate of earnings or of dividends was clearly not reflective of forward-looking growth, as the historical

experience was anomalous. In these instances, a sample average of dividend growth was applied for the purpose of estimating the DCF model, rather than the historical average growth rate of dividends for the particular company. This approach aligns with financial market experience: investors take account of industrywide experience in the formation of expectations of individual entities within the relevant sector. For example, the 10-year deterministic (i.e., geometric) average growth rate of earnings for Black Hills in the 2021 DCF model was negative, even as earnings per share growth between 2021 and 2022, were highly positive. Using a sample average growth rate was a reasonable adjustment for these cases. To implement this methodology, the same formula is used in these cells—namely, an industry average calculation, and this results in the same number appearing for the cells in column O, lines 78, 79, 81, 86, and 90.

2c. See answer to (2b).

2d. Witness Crowley did not perform any calculations to obtain the growth estimates in columns Y and Z. These values are direct inputs from reported numbers obtained from Zacks and Yahoo Finance. Documentation from the time the analysis took place is no longer available. However, for purposes of illustration, I provide current estimates from both sources in the attached file "DR 25-2d". Note that the estimates from these publications will have changed since the model was filed.

2e. A sample average growth rate was used for the 2023 DCF estimate for NorthWestern Energy Group and Unitil Corporation. In the case of

NorthWestern Energy Group, the sample average was used because the growth rate estimates from Zacks and Yahoo Finance diverged so significantly that neither was believable. In the case of Unitil Corporation, earnings growth estimates were not available at the time from Zacks or Yahoo Finance. A reasonable alternative to dropping the two companies was to use a sample average growth rate for the purpose of calculating a single stage DCF estimate.

2f. The share prices that are used in the calculation of market returns (i.e., data from 2014 onward), found in sheet "YCP," reflect the close price of shares for each company, or the price at the market close, on the first trading day of May for each year. I use market valuations of equity in early May because, by this time, prior year 10-K filings have been released and the information has been priced into market expectations. Note that the column headers in this sheet are mislabeled and indicate December dates rather than the correct May dates.

2g. The data in sheet "T R" reflects the total return of various relevant asset classes, as reported by the Center for Research in Securities Prices ("CRSP") at the University of Chicago. For example, CRSP reports the total return, inclusive of dividends, of Large Cap Equities dating back to 1926. This spreadsheet draws upon this CRSP data.

2h. This data was obtained from the Center for Research in Securities Prices ("CRSP") at the University of Chicago. CRSP Data can be obtained here: https://www.crsp.org/research/crsp-historical-indexes/.

FPUC's Response to Staff's Twenty Sixth Data Request (No. 1)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTY SIXTH SET OF DATA REQUESTS

1. Please refer to cell 12d in DR 15.1a Support for SPP Adjustments (35335290.1).xlsx, filed as a supplement to FPUC's Responses to Staff's Fifteenth Set of Data Requests. It states that the "Per C-3 Adj for O & M SPP" for 2024 is -1,915,798. However, FPUC's MFR C-3 lists the adjustment to eliminate SPP expenses as -1,915,769. Please explain the $29 discrepancy.

Company Response:

The $29 difference in the 2024 SPP adjustment of .0015% was due to rounding of the inflation factor used to adjust 2023 expenses.

85

FPUC's Response to Staff's Twenty Seventh Data Request (Nos. 1-2)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTY SEVENTH SET OF DATA REQUESTS

1. A customer at the Marianna service hearing testified that credit card payments are limited to $750 per transaction. As a business owner, the customer found that to be an issue as multiple payments needed to be made to completely pay her bill. Please explain why credit card payments are limited to $750 and discuss if that payment limit can be removed.

Company Response:

The $750 limit for payments through FPUC's EZ-Pay one-time payment option was set through the agreement with our payment processing vendor, Kubra. This threshold was established based on average payment amounts at the time to maintain a lower processing fee of $2.25 for both residential and commercial customers. Customers needing to make larger payments can opt for the free EZ-Billing option, an automated online payment method, which has a higher maximum payment threshold of $100,000.

2. FPUC's website refers to third-party payment centers. Please provide a list for both Northeast and Northwest divisions of the third-party payment centers, including the address, and state where customers can find information about the location of the centers. If they are listed on the FPUC website, please provide the link.

Company Response:

Please refer to the attached file DR 27.2 – RCP Locations in Florida for the details including the addresses, of locations in the Northeast and Northwest divisions where customers can pay their bills through a third-party vendor.

The information regarding location of the Company's third-party payment locations may be found on the back of the customer bill which is attached as "DR 27.2 - FPU Bill Back".

Additionally, FPUC's website refers customers to our payment centers where they can pay their bills with cash. Customers can locate these centers by:

- **visiting our EZ-Pay webpage (https://fpuc.com/customer-care/ez-pay/),**
- **clicking the EZ-Pay option,**
- **entering their account number,**
- **selecting the "Pay with Cash" option.**

A search page is then displayed, allowing users to enter their zip code and filter by preferred store type (e.g., 7-Eleven, CVS Pharmacy, Family Dollar). A map and list of matching locations will appear.

The Company also has printed field cards (Please refer to the attached file DR 27.2 – Field Cards"). These cards are provided to all our field technicians. They have them available with them in the field and copies available to provide to the customers if they ask about payment options.

Your Safety is Our Top Priority

Review these Important Safety Tips and Guidelines

DOWNED POWER LINES

Always assume all power lines are active and dangerous, so be sure to stay away.

Do not drive on them.
Do not touch them.

Should you come across a downed power line, including lines that could be downed within a tree, or across a tree line, report it to us immediately at **800.427.7712**.

CALL BEFORE YOU DIG

Hitting underground utility lines could result in fines, injury or worse. Call the free **8-1-1** service number to have your utility lines marked before you start digging (at least two days in advance).

811®

Know what's below.
Call before you dig.

HOW TO DETECT A GAS LEAK

SMELL: A distinct 'rotten egg odor' is added to natural gas to help you identify a leak.

SEE: Blowing dirt or bubbling creeks or ponds.

HEAR: Listen for hissing sounds near gas appliances or pipeline.

FPUC's Response to Staff's Twenty Eighth Data Request (Nos. 1-5)

(Including All Attachments)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTY EIGHTH SET OF DATA REQUESTS

1. Please refer to MFR Schedule E-13c, titled "Base Revenue By Rate Schedule – Calculations," and FPUC's supplemental response to Staff's Fourth Set of Data Requests, Question No. 12, Excel file titled, "DR 4.1 Weather Normalization Forecasts - with Annual (002)(35386069.1) (SUPPLEMENTAL)," tab titled "Annual Summary." Please confirm the following rate classes appearing in MFR Schedule E-13c are the following rate classes appearing in the Excel file:

    a) Residential Service = Residential
    b) General Service = Commercial Small
    c) General Service Demand = Commercial

Company Response:

Confirmed

2. Please refer to MFR schedule E-13c, titled "Base Revenue By Rate Schedule – Calculations." For each customer class listed below, and by division (Northeast, Northwest), please provide FPUC's annual actual customers and UPC for 2015 through 2023, annual actual/forecast of customers and UPC for 2024, and annual forecast of customers and UPC for 2025 for the following rate classes. Please provide this data in Excel format similar to the data provided in FPUC's supplemental response to Staff's Fourth Set of Data Requests, Question No. 12, Excel file titled, "DR 4.1 Weather Normalization Forecasts - with Annual (002)(35386069.1) (SUPPLEMENTAL)," tab

titled "Annual Summary."

a) General Service Large Demand (GSLD)
b) General Service Large Demand1 (GSLD1)
c) Lighting Service (OL and SL)

Company Response:

Please refer to the attached file "DR 28.2 General Service Large & Lights Annual".

3. Please refer to MFR schedule E-13c, titled "Base Revenue By Rate Schedule – Calculations." For each applicable customer class, and by division (Northeast, Northwest), please provide FPUC's annual actual demand (KW) for 2015 through 2023, annual actual/forecast of demand for 2024, and annual forecast of demand for 2025.

Company Response:

Please refer to the attached file "DR 28.3 KW Demand (2015-2025)".

4. Please refer to MFR Schedule F-5, page 1 of 3, titled, "Forecasting Models." The third paragraph on this page appears to address FPUC's models for peak demand for the GSD and GSLD rate classes. These models do not appear alongside the UPC models in MFR Schedule F-7, pages 1-6 of 21. Please provide equivalent information regarding the demand models similar to that provided for the UPC models.

Company Response:

Models of the type in MFR Schedule F-7, pages 1-6 of 21 were not used to forecast peak demand (kW), only to forecast UPC (kWh). Please refer to the Company's response to Staff's Fourth Set of Data Requests, Question No. 4.

5. Please refer to MFR Schedule F-5, page 1 of 3, titled, "Forecasting Models." The fourth

paragraph on this page appears to address FPUC's methodology for forecasting billing determinants for the GSLD1 rate class. FPUC states that a "direct" forecast of KWH purchases, billed KW demand, and kVar were utilized. Please explain, in more specific terms, the methodology used.

Company Response:

KWH for GSLD1 is not used in the calculation of base rates since the rates are KW and kVar based. But, KWH was used for projections of clause revenue. KWH for GSLD1 was forecast using the prior 2-year average of the existing GSLD1 customer and the Standby customer who is being proposed as GSLD1 in this case. The total estimated KWH was then split between Firm and Non-Firm usage based on the Firm projections for the prior year since those were thought to most closely represent future usage.

KW and kVar usage were based on the prior 3-year average of both the existing GSLD1 customer and the current Standby customer using actuals from June 2021 to May 2024.

FPUC's Response to Staff's Twenty Ninth Data Request (Nos. 1-3)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S TWENTY NINTH SET OF DATA REQUESTS

1. At the Service Hearings in both Fernandina and Marianna, customers testified regarding their extreme difficulty trying to contact FPUC by phone to address and/or resolve billing issues.

   a) Please describe FPUC's current process for handling customer calls. As part of your response, please indicate how many employees are available to answer customer calls during normal business hours.

   b) Please provide the average call wait time customers experience when attempting to contact FPUC. If this is unknown, please explain why. Staff's Twenty Ninth Data Request January 13, 2025

   c) Please describe alternative methods available to customers for contacting FPUC, if any (e.g., website or email).

   d) Please describe the methods by which customers can submit their payments and the fees associated with each.

Company Response:

1a. The call center utilizes skill-based routing that distributes incoming calls to the most suitable agent based on specific service type and agent availability. There are approximately 30 customer service agents available to answer customer calls during normal business hours.

1b. The average call wait-time customers experience when attempting to contact FPUC is 4 minutes and 36 seconds.

1c. The various methods available to customers for contacting FPUC are:

- **Phone**
  800.427.7712

- **Mail**
  Florida Public Utilities
  P. O. Box 610
  Marianna, FL 32447

- **Email**
  CustomerSupport@fpuc.com

- **Online**
  fpuc.com

1d. The company offers several payment options available to meet our customer's needs. The payment options with no fees include:

- **EZ-BILLING**
  Customers can enroll in our online bill management platform to set up automatic payments from their checking or savings account. They can also customize email and text notifications, payment reminders and confirmations.

- **MAIL**
  Florida Public Utilities
  P.O. Box 825925
  Philadelphia, PA 19182-5925

- **AUTHORIZED RETAIL LOCATIONS**
  Pay in person with cash, money order or debit cards. Please see Staff's Data Request 27.2 for the list of locations.

The payment options with fees ($2.25 per $750)

- **EZ-PAY**
  Submit one-time payments, using a credit or debit card24/7 via phone, online, or any mobile device.

- **PHONE**

Automated phone system: 877.337.3145

2. Please explain whether FPUC was aware, prior to the Service Hearings, of the issues expressed by customers regarding difficulty contacting them. If so, what actions has FPUC taken to improve this situation?

Company Response:

The company was aware, prior to the Service Hearings, of the issues expressed by customers regarding difficulty contacting them. Since mid-2023, the company has made significant improvements to call handling practices such as , increased staffing, empowered our team members, enhanced training, streamlined processes and placed a focus on performance monitoring to maximize the caller's experience., The company uses a Plan, Do, Check, Act (PDCA) model, which allows for continuous improvement.

3. Did FPUC reach out to each customer that testified at the Service Hearings. If so, when was contact made and how were the customer concerns addressed? If not, please explain why.

Company Response:

Yes, company representatives have reached out to a all of the customers that delivered testimony either in person immediately following the hearing, or later by phone. In several cases, the company representative had to leave a message and continues to attempt contact. The company will provide a detailed report of all customer contacts and resolutions.

88

FPUC’s Response to Staff’s Thirtieth Data Request (Nos. 1-5)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S THIRTIETH SET OF DATA REQUESTS

For the following questions, please refer to the direct testimony of witness Haffecke, beginning on page 22.

1. Please explain why FPUC's proposed flat rate recovery method is preferable over the existing variable rate.

COMPANY RESPONSE:

When the Company implemented the Experimental Non-Firm Energy Tariff, the GSLD1 customers began using less regular usage and more non-firm energy usage which was billed separately. This resulted in less storm revenue than was projected in the original filing for the Hurricane Michael docket. Since the Experimental Non-Firm Energy Tariff will still be in effect, at least until the one year expires, the change to a flat rate was proposed to ensure recovery of storm revenue.

2. Please explain why FPUC is proposing a flat rate for the recovery of Hurricane Michael costs for the GSLD1 customer class only.

COMPANY RESPONSE:

Please refer to the response to item 1. GSLD1 and Standby customers are the only ones that the Experimental Non-Firm Energy tariff applied to, and the Company is requesting Standby be merged into the GSLD1 tariff.

3. Please demonstrate how FPUC's proposal to charge a flat rate will not have an impact on the total recovery of the surcharge.

COMPANY RESPONSE:

The proposed flat rate was calculated to ensure that only the amount originally requested in the Hurricane Michael docket for industrial customers would be recovered.

4. Please explain whether FPUC has had conversations with GSLD1 customers about the proposed change from variable rate to flat rate.

COMPANY RESPONSE:

Yes, the customers are aware of the change. If the customers' total usage was to continue at the current level of both their firm and non-firm usage after expiration of the non-firm tariff, this change will benefit the customer.

5. Please explain any benefit to either the GSLD1 customer or FPUC associated with the proposed change to a flat rate recovery method.

COMPANY RESPONSE:

Please see the response to item 4 above for the benefit to the customer, which occurs after the expiration of the non-firm tariff. The benefit to the Company is full collection of the amount originally requested in the Hurricane Michael docket even if the customers switch their usage from firm to non-firm. This does not harm the customer as the Company is only seeking to recover what the Commission has already approved.

89

FPUC’s Response to Staff’s Thirty First Data Request (Nos. 1-8)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S THIRTY FIRST SET OF DATA REQUESTS

For the following questions, please refer to the direct testimony of witness Haffecke, beginning on page 22.

1. Please refer to the direct testimony of witness Haffecke, page 13, lines 17 through 19. Please indicate if there are any potential cost savings, O&M or otherwise, associated with the replacement and rebuild of FPUC's Northeast substations, JL Terry and AIP. Please quantify these savings, if possible. If there are no savings associated with these projects, please explain why.

Company Response:

The intent of these projects is focused more on reliability as opposed to a reduction in expense. The FPU maintenance program is a time-based program which is intended to perform maintenance on equipment prior to operational issues or failure. Maintenance on the substation equipment varies, depending on the equipment, but can occur monthly, quarterly, annually, five years or 10 years and is independent of the age of the equipment. Assuming the plan works as intended, equipment is maintained during the normal time schedule and then removed from service prior to operational issues or failure so there is no added expense. There will be the occasional failure that occurs but this is an extremely small percentage of the overall maintenance cost.

2. Please refer to the direct testimony of witness Haffecke, page 16, lines 14 through 17.

Please explain why FPUC did not elect to seek recovery of the self healing equipment through the Storm Protection Plan Cost Recovery Clause.

Company Response:

The self-healing equipment was proposed in the 2022 FPU SPP initial filing. During the hearings it was determined by the Commission that this type of project was more appropriate to be included in an electric rate proceeding and was removed from the final approved SPP.

3. Please refer to the direct testimony of witness Haffecke, page 16, lines 20 through 21, and FPUC's response to Staff's Sixth Data Request, No. 25 for the following questions.

a) Please confirm that the manhole removal project consists of the replacement of eroding fibercrete vaults inside the manholes and explain how the Utility determined the vaults were eroding.

b) Please explain what FPUC uses the fibercrete manhole vaults for.

c) If additional activities outside of replacement of the fibercrete vaults are being conducted under this project, please identify these activities, how these activities were determined to be needed, and identify what costs requested are associated with them.

Company Response:

a. Yes, the project consists of replacing eroding fibercrete vaults. During work to

relocate manholes due to a road relocation project, it was identified that the sides of the manholes were collapsing in toward the center of the manhole. When attempting to remove the manholes, the entire manhole collapsed and was not able to be removed.

b. The manhole vaults are used in conjunction with underground distribution feeders. The manholes allow the cable to be pulled from one location to another using the vaults at these locations or allow for splicing of separate cables that are being connected.

c. This project was only associated with the replacement of the fibercrete manhole vaults that have failed in service.

4. Please refer to FPUC's response to Staff's Sixth Data Request, No. 2. Regarding the Excel file provided for the new 75 MVA transformer installation project, please explain how the retirement amount was determined for the 50 MVA transformer. As part of this response, please identify the MFR schedule reflecting this retirement amount.

Company Response:

The $10,000 credit shown on this schedule was the estimated salvage, not the actual retirement. The $10,000 salvage estimate was based on a quote received for a similar unit. The salvage was not properly included as a credit to accumulated depreciation but, instead decreased the projected plant addition recorded.

The Company did project a $250,000 retirement related to this project for December of 2025 based on the estimated original cost of the transformer being

retired. The amount can be found in MFR B-7 (2025) in account 353E as part of the $305,200 retirement and included in the balances in B-8 (2025) for the same plant account. It can also be found on B-9 (2025) in the same account for accumulated depreciation and included in the balances in B-10 for the same account.

5. Please refer to FPUC's response to Staff's Sixth Data Request, No. 6(a). Please identify how much of the $61,041 allocation to electric expense is internal employee costs, and how much is material costs. As part of this response, please detail what materials will be included in the material costs.

Company Response:

The amount is all internal employee costs. There were no material costs.

6. Please refer to FPUC's response to Staff's Sixth Data Request, No. 13. Please explain how FPUC selected the 10 live front projects.

Company Response:

Each year, FPU conducts an inspection of the pad-mounted equipment in order to assess the condition of the equipment and identify any issues that may have occurred since the prior inspection. The intent is to complete the replacement of live front equipment over time while using the inspection information as a basis for the selections. In order to determine the live front equipment to be replaced, the condition of the equipment along with the efficiency of replacing the equipment is considered when selecting the appropriate equipment to be

E1337

replaced.

7. Please refer to FPUC's response to Staff's Sixth Data Request, No. 27(f). Please detail the "other tasks" that other personnel will be able to focus on with the addition of the Line Supervisor positions.

Company Response:

The "other tasks" are related to management items such as strategic planning, evaluation of operating/construction efficiencies, addressing operations issues, and supervising employees, etc.

8. Please refer to FPUC's response to Staff's Twentieth Data Request, No. 10(b) for the following questions.

   a) Please indicate if other backup transmission service is currently available at the stepdown substation. If so, please identify the backup transmission service that is currently available, and explain why the installation of the 69 kV underground cable and switches is also necessary.

   b) Please explain how FPUC currently minimizes interruptions to customers served by the stepdown substation during maintenance activities.

Company Response:

a) We do not have backup service. The Step-Down substation takes 138 KV transmission service from FPL. That voltage is stepped down to 69 KV in order to provide service to three different distribution substations. One 69 KV line

E1338

goes radially to the AIP substation which provides service to the south end of Amelia Island. If the line is out of service, there is no other back up line to keep the power on while repairs are made. The second 69 KV line goes to the JL Terry Substation that serves the north part of Amelia Island. This line does have a partial back up loop that allows the ability to keep the power on while approximately half the line is out of service. The third 69 KV line provides service to the distribution section of the Step Down substation. This section of Step Down substation provides service to the central part of Amelia Island. Due to a recent Step Down substation switch failure, it was necessary to remove one of the main transformers from service. Since it is impossible to replace the switch in the current configuration, the substation capacity was reduced by 37.5% even though load requirements have increased with the cold weather. The Company has a plan to build a temporary, back-up 69 KV line which will allow the replacement of the switch and bring the capacity of the substation back to 100%. This temporary line will serve the same purpose as the 69 KV loop and switch project. With the completion of this project, the current issue and other similar issues within the substation can be avoided.

b) As described in 8a above, it is necessary and possible to put temporary poles and wire in place in certain areas of the Step Down substation to make some repairs without causing power interruption. However, there are other locations in the Step Down substation where it is not possible to place poles and wire to construct temporary facilities. Should maintenance or a repair be necessary at these locations, with no back up facilities in place and placement of temporary

facilities not an option, an outage would need to be scheduled during low load periods, such as at night or on weekends. Notifications regarding the planned outage would be made to customers via the FPUC website or direct mailings noting the time that maintenance or repairs are to occur. The Company notes that installing and removing temporary facilities results in increased costs; therefore a permanent backup is preferred.

FPUC's Response to Staff's Thirty Second Data Request (Nos. 1-5)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S THIRTY SECOND SET OF DATA REQUESTS

1. Please explain in detail how the Company's pricing structure operates with respect to transmission and distribution charges that are associated with its Purchase Power Agreement (PPA) for Northwest Florida.

Company Response:

Currently FPU receives a Network Transmission Bill from FPL monthly. This bill is a single consolidated bill that contains billing from both the NE FL and NW FL divisions. Although this is a consolidated bill, the details from both NE FL and NW FL are shown separately. The NW FL detail shows the network transmission billing, meter reading and processing charge and the distribution facilities charge. These charges are included in the total wholesale power purchase and network transmission billing bill that are included in the annual purchased power filing.

The structure of the Network Transmission billing is based on two separate contracts, one for NW FL and one for NE FL that are then combined into a single bill for accounting purposes.

The Network Integration Transmission Service Agreement and Network Operating Agreement between FPL and FPU for the NW FL was executed August 5, 2022 and will continue until December 31, 2029. This agreement sets the following as the billing parameters for this agreement with cost defined by the FPL Open Access Transmission

Tariff (OATT). The kw-month amount used below is determined using the FPU KW demand value coincident with the FPL system peak.

Schedule 1 – Transmission Charge ($/kw- month)

Schedule 2 – Reactive Supply and Voltage Control from Generation or Other Sources Service ($/kw- month)

Schedule 4 – Energy Imbalance ($/kw- month)

Schedule 10 – Losses ($/kw- month)

FERC Assessment Fees ($/kwh)

Network Meter Reading and Processing Fee ($/meter)

Distribution Facilities Charge ($/month)

2. By what specific method and point in time will the relevant distribution charges associated with the PPA for Northwest Florida cease being assessed to FPUC?

Company Response:

FPU and FPL are currently working through the details to enable modifications to the substations to allow the sale of the substations to FPU. There will be four substations which currently have distribution facility charges to FPU on a monthly basis. As these modifications are completed and the sale occurs for each substation, the distribution facilities charges will be dropped from the monthly transmission billing. Although each substation sale may occur at different times, the goal is for all four substations to become part of FPU by the end of 2025.

3. Were any projected savings associated with the Northwest Florida substations included in the 2025 fuel factor? If so, what was that projected savings amount?

Company Response:

The savings associated with the NW FL substation was included in the 2025 Fuel Factor. The projected savings amount was $1,380,657.

4. Will the Company's current PPA require re-negotiation in order to achieve the savings alluded to in FPUC's response to interrogatory No. 12[1]?

Company Response:

Although we do plan to consolidate all the Network Transmission Billing into one agreement, there is nothing required to achieve the savings.

5. Has the projected fuel clause-related savings amount of $1.4 million been updated since the filing of interrogatory response No. 12? If so, what is the new projected savings amount?

Company Response:

No, the projected savings have not been updated.

[1] It is not clear what Interrogatory 12 is referenced here. As such, respondent has assumed that the referenced interrogatory is Interrogatory No. 12, in Staff's Fifth Set of Interrogatories to the Company in Docket No. 202400001-EI.

E1344

91

FPUC's Response to Staff's Thirty Third Data Request (No. 1)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S THIRTY THIRD SET OF DATA REQUESTS

1. Please refer to witness Russell's direct testimony. On page 11, line 15, witness Russell explained that Florida Public Utilities Company's (FPUC) calculation of the interest rate of 4.51 percent only includes 21 percent of the six debt issuances totaling $550 million used to finance the purchase of Florida City Gas (FCG).

a) Please explain how the Company determined 21 percent relates to funding overall FPUC operations and is appropriate for calculating the embedded cost of debt for FPUC.

b) How much of the $550 million debt was used to purchase FCG?

Company Response:

a) FPUC utilizes the capital structure of Chesapeake Utilities Corporation (the parent) when calculating the capital structure of its regulated businesses or subsidiaries. This methodology is used because CUC is the entity that issues the debt and equity capital necessary to support the funding needs to its regulated businesses including FPUC. FPUC does not issue third party equity nor is it a party to any third-party debt agreement. Using the equity/debt ratios for the entire company is consistent with a prior City Gas order PSC-1996-1404-FOF-GU, page 17: "We find that the appropriate capital structure for City Gas should be based on NUI's capital structure for investor sources. Amounts for customer deposits, deferred taxes, and investment tax credits should be

specifically identified at the City Gas level…NUI Corporation is the source of investor capital for City Gas. The Company does not raise capital on its own. Therefore, the Company filed a divisional capital structure using the ratios of investor sources of capital adjusted to reflect NUI's capital structure." The final order in Docket No. 20220067-GU was consistent with this methodology.

Before the FCG acquisition, our equity to total capital structure was 53%. As discussed in Witness Russell's testimony, the board approved range is 50% to 60% equity to total capitalization. From time to time, the Company may fluctuate above or below this target range, given the economic markets and the Company's capital investment plans. Strategically, the board authorized the company to temporarily operate below the target range immediately following the FCG acquisition, with the expectation to get back within target range within twelve to twenty-four months.

The amount of the $550 million of debt issued that related to the Florida City Gas (FCG) acquisition was determined by multiplying the acquisition cost times Chesapeake's estimated long-term debt ratio at 12/31/23 (long-term debt divided by the total capitalization). The difference between the long-term debt to purchase City Gas and the $550 million resulted in 21 percent of the debt related to Chesapeake's estimated long-term debt financing plan.

All our filings have maintained Chesapeake's equity/debt ratios consistently with the methodology that has been utilized, and approved, since the FPU merger.

b) **The portion of the $550 million debt issued that was used to purchase FCG was $432M since the Company used debt, newly issued equity and existing equity to purchase FCG.**

92

FPUC's Response to Staff's Thirty Fourth Data Request (Nos. 1-3)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSE TO STAFF'S 34TH SET OF DATA REQUESTS

1. Please refer to the Stipulation and Settlement Agreement (Settlement), filed in Docket No. 20240099-EI, Section III. "Revenue Requirement," for the following request.[1] Will a carrying charge apply to any amounts potentially deferred as indicated in subsection c.? If so, what will be the carrying charge?

COMPANY RESPONSE:

There will not be a carrying charge applied to the deferred amount.

2. Please refer to the Settlement, Section III. "Revenue Requirement," subsection d. for the following requests.

   a. Does this section imply that the Company will apply a weighted average cost of capital of 6.36 percent to an actual investment balance related to the relevant substation and transmission assets, but, will not seek to implement an annual revenue requirement amount in excess of $727,778?

COMPANY RESPONSE:

Yes, the Company will apply a weighted average cost of capital of 6.36% to an actual investment balance related to the relevant substation and transmission assets up to an annual revenue requirement of $727,778.

   b. If the response to subpart a. is affirmative, staff understands the revenue requirement figure of $727,778 was calculated using a cost of equity of 10.15 percent. Please explain how the Company will achieve the same (or less than) revenue requirement while assessing a higher cost of capital than originally estimated.

COMPANY RESPONSE:

The $727,778 was based on projected costs. If the costs are higher, the amount recoverable through the step increase will be capped at the $727,778, and the Company will not earn its

[1] [1]Document No. 03457-2025.

allowed return on that additional cost until the next rate case. If the amount is lower, the amount submitted for recovery through the step increase will be less than the $727,778 based on the actual costs. The potential for a temporary under-recovery was not material enough to cause an issue in settlement negotiations.

3. Please refer to the Settlement, Section VIII. "Rate Case Expense" for the following request. Is staff correct that this this section amends the previous 4-year (originally requested 3-year) rate case expense amortization period?

COMPANY RESPONSE:

The Company originally requested a 4-year amortization period. At the March 4, 2025, Agenda conference, OPC requested that a 5-year amortization period be applied. The Company stated it would not object to the period be extended to 5 years. The Settlement reflects the 5-year amortization period included in Commission Order No. PSC-2025-0114-PAA-EI, at page 55, and the Company will use that period to amortize the actual balance of rate case costs at completion of the case.

93

FPUC’s Response to Staff’s Thirty Fifth Data Request (No. 1)

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S 35TH SET OF DATA REQUESTS

1. Please refer to the Stipulation and Settlement Agreement (Settlement), filed in Docket No. 20240099-EI, Section II. "Return on Equity and Equity Ratio," for the following requests.[1]

   a. Staff understands this section of the Settlement to amend the Return on Equity (ROE) approved by (protested) Order No. PSC-2025-0114-PAA-EI of 10.15 percent to 10.20 percent, while maintaining the same equity ratio of 50.04 percent.[2] Is staff's understanding correct?

COMPANY RESPONSE: Yes, the ROE midpoint will be 10.2% and the equity ratio fixed at 50.04% during the settlement period.

   b. If the response to a. is affirmative, what is the annual dollar value associated with this change?

COMPANY RESPONSE: The dollar amount associated with changing the ROE from 10.15% to 10.20% is $29,011 - all else being equal. However, the overall dollar values to the participants are not calculable due to the give and take of negotiations. The $29,011 was calculated as follows: ($144,170,636*.02% (Difference 6.36% and 6.34%) =$28,834-$7,308 income tax=$21,526*1.3477=$29,011).

   c. Please explain why Florida Public Utilities Company (FPUC or Company) believes an ROE of 10.20 percent is in the public interest and should be approved as part of a larger or "global" settlement of all issues in this docket.

COMPANY RESPONSE:

The settlement was agreed to by the parties to avoid further litigation costs being borne by the customers and to provide a reasonable revenue requirement for the Company while lowering the rates for the customers. The increase to 10.20% is still within staff's range of reasonableness discussed in paragraph 20 and Table 19 on pages 44-45 of Commission Order No. PSC-2025-0114-PAA-EI and does not cause a material increase for the customers.

   d. Does FPUC agree with the statement in paragraph 20, which correspond to values in Table 19 on page 45 of Order No. PSC-2025-0114-PAA-EI: "[w]e have calculated a ROE of 10.15 percent which is within the range of ROEs that we have recently approved for other Florida electric and natural gas companies (9.50% - 11.00%) as summarized in Table 19. The Florida electric companies' authorized ROEs range from 10.30 percent to 10.80 percent[?]"

COMPANY RESPONSE: While it is not entirely clear as to which of the two statements referenced on page 45 of the PAA Order staff is referring, FPUC agrees that the 10.15 percent approved in the PAA Order, which has since been protested, was and is within the range of 9.50% to 11% of approved ROEs for all Florida regulated electric and natural gas utilities, and that other Florida electric companies have authorized ROEs that range from 10.30% to 10.80%. Even with the slight increase to the ROE midpoint agreed to in the Settlement, FPUC's authorized mid-point ROE will remain the lowest of all the Florida electric IOUs.

e. If the response to d. is affirmative, does FPUC agree that this information is still comparable to an ROE of 10.20 percent?

COMPANY RESPONSE:

The 10.20% is still lower than the average ROE shown on Table 19 of Commission Order PSC-2025-0114-PAA-EI but is within the range of 9.50% to 11.00% in the paragraph quoted in item d above.

---

[2]Order No. PSC-2025-0114-PAA-EI, issued April 7, 2025, in Docket No. 20240099-EI, *In re: Petition for rate increase by Florida Public Utilities Company.*

94

FPUC's Response to Staff's Thirty Sixth Data Request (Nos. 1-3)

(Including All Attachments)

FPSC EXH NO. 94
ADMITTED

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC's Responses to Staff's 36th Set of Data Requests

1. Please provide MFR Schedules A2 and A3 reflecting the differences in Order No. PSC- 2025-0114-PAA rates and proposed Stipulation and Settlement (2025 Agreement) rates.

COMPANY RESPONSE:

Please see attached file DR 36.1.

2. Please provide an updated MFR Schedule E10 in Excel format with formulas unlocked, reflecting the agreed base rate revenue of $7.4M for the 2025 test year.

COMPANY RESPONSE:

Per email from Sevini Guffey on 5/19/2025 the question was corrected to ask for E8 instead of E10. Please see the attached file DR 36.2.

3. With reference to Paragraph X. Enhanced Local Presence, of the 2025 Agreement, items a through f lists multiple activities the Company will undertake to improve customer service. Please explain how the associated costs will be accounted for with the Enhanced Local Presence and also discuss who will bear the costs.

COMPANY RESPONSE:

Please see the comments below for each item a through f.

Enhanced Local Presence

a) The Parties hereto acknowledge that Company provides thirty-three (33) walk-in payment locations in and around Marianna (NW Division). Of those locations, seven (7) do not require an additional fee. On Amelia Island, the Company provides twenty-six (26) walk-in payment locations, of which nine (9) do not charge an additional fee. To improve the process of paying bills at these walk-in locations, a bar code has been added to the back of all billing statements.

The Company currently offers these walk-in payment locations as part of the current vendor contract to do so. The barcode was added in early 2024 to enhance the customer's experience.

b) The Company commits to add enhanced bill messaging, social media messaging, and website visibility sharing the identities and locations of these payment centers. The Company will also promote an enhanced customer support email option for Florida electric customers at customersupport@FPUC.com, which is already available to customers.

The Company does not anticipate additional costs for the enhanced bill messaging, social media messaging and website visibility of payment centers, as this is a normal course of business and messaging will be adjusted to accommodate this commitment. The noted email is currently in use, and managed appropriately, should the volume of emails received by this email increase significantly, the Company will prudently assess the appropriate resourcing plan to ensure timely responses.

c) The Company will host periodic virtual townhall meetings for its customers, at mutually agreeable times, which will provide customers with an opportunity to speak directly with members of FPUC's team, which will include, as may be necessary, members of the Customer Care team, Operations, and Billing and Accounts team members. Customers will be able to interact with these team members via a live video feed. These sessions may, as necessary, also include break-out sessions to protect customers' identifying and account information.

The Company does not expect an increase in costs for these virtual townhall meetings, as the Company already has the software required to host these meetings, and the planning and execution of such events are normal course of business type functions.

d) The Company will also host periodic in-person townhall meetings in each service territory. It is the intent of the Parties hereto that the Company conduct one to two such meetings per

E1357

year, as scheduling allows, in each service territory at mutually agreeable times. Noticing for such meetings will be provided in bill inserts, as well as publication in local newspapers within 7 days of such an event.

The expected cost for the periodic in-person townhall meetings would include travel expenses, as required, refreshments for the events, and marketing materials such as newspaper ads or other promotional collateral to raise awareness and encourage attendance at the events.

e) The Parties also agree that conducting such in-person, townhall meeting will be considered a pilot initiative, and the Company will provide follow-up reports to the Consumer Parties and the Commission regarding the effectiveness of these events, including, but not limited to, participation by customers.

The Company does not expect incremental costs for the follow-up reports, as this is normal course of business for the Company to ascertain if events are beneficial and prudent.

f) In addition, the Company will, at a minimum, conduct semi-annual reviews of the effectiveness of actions listed above, including conducting periodic surveys to gather customer feedback to help guide the Company's continuing improvement efforts.

The expected costs for surveys would be minimal, if any, as the Company has the toolset required to produce and manage customer surveys. The potential cost incurred could be through the survey distribution channel (i.e. mass emails, etc.).

In sum, to the extent that any of these activities cause additional cost, such cost will not affect the rates set in this case because the revenue requirement has already been agreed upon, and these costs were not specifically included.

Schedule E-8 Company-Proposed Allocation of The Rate Increase By Rate Class Page___of___

Florida Public Service Commission

COMPANY: FLORIDA PUBLIC UTILITIES
Consolidated Electric Division
DOCKET NO.: 20240099-EI

Explanation: Provide a schedule which shows the company-proposed increase in revenue by rate schedule and the present and company-proposed class rates of return under the proposed cost of service study. Provide justification for every class not left at the system rate of return. If the increase from service charges by rate class does not equal that shown on Schedule E-13b or if the increase from sales of electricity does not equal that shown on Schedule E-13a, provide an explanation.

FPUC's Response to Staff's Thirty Seventh Data Request (Nos. 1-5)

FPSC EXH NO. 95

ADMITTED

E1368

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC's Responses to Staff's 37th Set of Data Requests

1. Referring to Paragraph III, section b., of the Stipulation and Settlement, please clarify if the reference to March 30, 2026 is a scrivener's error and if the correct date should be March 20, 2026.

COMPANY RESPONSE:

Yes, the correct date should be March 20, 2026.

2. Referring to the footnote on page 3 of the petition, please state whether the reference to March 30, 2026 is a scrivener's error (similar to the question above) and the $7.4 million would be for the period March 20, 2025 through March 19, 2026.

COMPANY RESPONSE:

Yes, the correct dates should be March 20, 2025 through March 19, 2026.

3. Referring to Paragraph III, section d., of the Stipulation and Settlement, please state when the substation and transmission projects are expected to be placed in service and provide the residential 1,000 kWh bill impact (on base rates and the purchased power cost recovery clause) when these assets are placed into service.

COMPANY RESPONSE:

At this time, the Company is still in the process of completing the substations and does not have an exact date of when they will be completed or how much the final revenue

E1368

requirement would be. Current contractor projections show full completion in December 2026. However, as stated in settlement paragraph III.d., the Company will file a notice of intent to implement this increase with the proposed tariff sheets when the work is complete and with all revenue requirement calculations. If the Company were to recover the maximum allowed amount, this would increase a residential 1,000 kWh bill by $1.11.

4. Please provide the residential 1,000 KWH bill impacts on the base rates portion of the bill that will go into effect on March 20, 2026.

COMPANY RESPONSE:

The Company is not able to determine the rates that will go into effect on March 20, 2026 until the over-recovery between the current rates and the settlement rates are approved and the 3-year average of that difference is computed. Paragraph XV.a. states that the "tariffs reflective of the rates that will be effective March 20, 2026 and for the subsequent years of the Minimum Term will be provided within 90 days of the data a Commission Order approving this 2025 Agreement becomes final. This is necessary to enable the Company to determine the over-recovery and thus the adjusted recovery for March 20, 2026 forward and to have our consultants determine the rates based on that adjusted number.

5. Please confirm the following table is correct; or provide a corrected table:

Period	Base Rates Revenue Req. Increase	Miscellaneous Charges Increase	Deferral of collection of $1 M first year rev req increase (over 3 years)	Difference between revenues received from PAA rates and Settlement rates (over 3 years)
3/20/25-7/1/25	$9.6M	+ $164,495		

Period	Base Rates Revenue Req. Increase	Miscellaneous Charges Increase	Deferral of collection of $1 M first year rev req increase (over 3 years)	Difference between revenues received from PAA rates and Settlement rates (over 3 years)
7/1/25-3/19/26	$7.4M	+ $164,495		
3/20/26-3/19/27	$8.4M	+ $164,495	+ $1 M / 3 = $0.33 M	- amount to be determined
3/20/27-3/19/28	$8.4M	+ $164,495	+ $1 M / 3 = $0.33 M	- amount to be determined
3/20/28-~~3/19/29~~ Until Next Rate Proceeding	$8.4M	+ $164,495	+ $1 M / 3 = $0.33 M	- amount to be determined

COMPANY RESPONSE:

This table is correct except for any addition for the substation step-up when the substation work is completed and the correction highlighted above. For clarity, the last column will reflect the difference in revenues received from the PAA rates and the Settlement rates for the period that the PAA rates were in effect; i.e. March 20, 2025 until the date the Settlement is approved.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO. 20240099-EI

FPUC'S RESPONSES TO STAFF'S FOLLOW UP DATA REQUESTS

1. **For the following projects can FPUC please provide the third-party/vendor being used for each and how they were selected? Also, was a bidding process utilized to select the vendor(s)?**

   a. **Security Camera Project**
   b. **Two-way communication system**
   c. **New Customer Information System (NCIS)**

Company Response:

A. Advantech is the vendor for the security cameras and video management. Advantech won a bid back in 2017 for the role of security integrator for Chesapeake. The Company has continued to use them for other similar projects; therefore, there was no separate formal bidding process.

B. Radio One is the anticipated vendor for the radio communication system. The Company received two bids thus far for the radio end user equipment, but prefers Radio One due to its reputation and equipment.

C. In order to select its new Customer Information System (CIS), which has been installed and activated, Florida Public Utilities sought expertise from industry leaders to support strategic direction, analyze approach to CIS enhancement / replacement, and provide industry and peer utility insights. One vendor, TMG, supported from system assessment and procurement process, while the second vendor, Ernst & Young (EY) focused on analysis of approach and alternatives. FPUC also consulted with KPMG to perform quality assurance checks and entered into a second engagement to evaluate security and controls testing identifying any deficiencies. Storm Runner was used for performance testing.

The TMG engagement established our strategic vision, direction, and standards aligning to business objectives for operating in the most cost-effective manner for a world-class solution. TMG has followed the TMGVAST© (Value Added Services & Tools) methodology which consist of a detailed upfront planning phase followed by a procurement process that they have executed over 150 times.
This methodology began with a current state analysis of the FPUC utility's operations of core CIS systems and its extended or edge systems (CSS, GIS, etc.). The next steps of the

process included a strategic analysis to identify the future-ready target state for business operations and necessary supporting technologies to provide improvement recommendations, alternatives, an implementation/upgrade plan for core and supporting systems and technologies to help achieve economic, financial, and operational goals.

Development of the utility's digital roadmap consolidated all findings from the previous analysis activities to assemble roadmap recommendations budget, resource requirements, and ongoing costs to be included in a comprehensive RFP package.

Workshops were completed to formally document project alignment to the utility's expectations. The RFP engagement included management of vendor responses, pricing (software bill of material and tools), informational attachments for integrations, technology, platforms, and utility documents covering items such as security, utility terms, corporate diversity programs, insurance, etc.

Throughout this process, FPUC identified more than 3,200 CIS system requirements and leveraged TMG to review and provide recommendations for systems best suited to support FPUC's requirements and expectations.

During the RFP and selection phase, TMG managed follow up, conducted additional workshops (if required), assisted with creation of an evaluation matrix, performed initial review of alignment to base requirements, and verified references scheduling interviews as appropriate.

Concurrently, FPUC refined project scope and developed an implementation blueprint ahead of contract negotiations where TMG again provided their industry expertise to facilitate cost management and maximize customer benefits.

In addition to partnering with TMG, we collaborated EY to conduct an analysis of system replacement alternatives. The alternatives analyzed were: 1) maintain current systems as they are, 2) upgrade/invest in existing systems, 3) outsource ongoing maintenance and support, 4) replace our current systems, and 5) migrate customers to one of the two CIS systems being replaced. This effort confirmed FPUC's approach to replace our current systems with a new modern CIS.

During the alternative assessment, EY evaluated each potential option to provide a rating against the following set of risk factors: execution, vendor health, ongoing operations and support, reliability and security, and business enablement. EY was uniquely positioned to share additional expertise regarding peer utility challenges and decisions.

These two engagements ultimately led us to the selection of our new CIS system, SAP, after an exhaustive evaluation of alignment to system requirements and business objectives as well as strategic direction and approach.

Over the course of the installation process, the Company also utilized IFS Mitigation, Starnik, Redwood BPA for batch jobs, Storm Runner for performance testing, One Source for Tax Software, Azure, Vertex, and Kubra, among others.

2. **With respect to Two-Way Communication System, please provide the updated total capital cost of the two-way communication system (the current proposed capital cost is $1.3 million). Was this based off of the lower of the two bids received for the equipment?**

Company Response:

FPUC's revised, best estimate for the cost is $326,430 based upon updated information and bids.

The $326,430 is a combination of the Radio One bid, which contemplates Motorola equipment, the amount anticipated for additional antenna and poles, installation, and FAA regulatory compliance.

The Company got 2 bids for radio service. Although one has not been definitively chosen yet, the Company is leaning towards Radio One because it is more reputable and uses Motorola equipment.

3. **Please provide the anticipated in-service date for the two-way communication system (the current in-service date is Q1 of 2025).**

Company Response:

The Company has since determined it needs approval from the FAA, so the estimated in-service date is now June 2025.

4. **Please provide the adjustments to remove any over-estimated amounts (e.g., plant, depreciation).**

Company Response:
The change is a reduction to rate base of $940,711 and a reduction to depreciation expense of $187,357 as shown on the attached worksheet.

5. **Please explain the methodology behind the depreciation rate used in the provided spreadsheet (rows 5 and 12)?**

Company Response:

In the filing, the radios were charged to account 397 Communication Equipment which has a 5 year amortization rate. The formula takes the prior month plant balance divided by 5 years divided by 12 months to get the monthly depreciation.

6. **For NCIS, the two main vendors were TMG and EY. Were any alternative vendors considered for these leading roles? What led FPUC to ultimately go with**

TMG/EY (e.g., was it the cost or specialization they provided?)?

Company Response:

TMG and EY were considered and ultimately selected because both had relevant experience with Utility billing system projects and related software implementation. They were also priced reasonably.
The Company also considered Deloitte, which also has expertise in this area, but their cost and implementation time frame were much longer than FPUC's budget and expected timelines.

7. **How is the "self-healing" project in the rate case distinguished from the "Distribution and Connectivity Automation" program in the updated SPP filed by FPUC in Docket No. 20250017-EI?**

Company Response:

The self-healing project in the rate case is essentially the Future Transmission and Distribution Enhancements program eliminated by the Commission from FPUC's 2022 SPP because it was primarily a "reliability" program, as opposed to "storm protection." It is the implementation of the "underlying data gathering system" noted in Order No. PSC-2022-0387-FOF-EI, issued in Docket No. 20220049-EI, at page 17, which the Commission found was a reliability project, rather than hardening.

In contrast, the Distribution Connectivity and Automation program included in FPUC's updated SPP is a hardening project that, while related to and dependent upon completion of the "self-healing" project in the rate case, is more aligned with storm protection and restoration in that it entails the implementation of the distribution automation systems that the Commission indicated would more likely be considered "storm protection" in that they will help "identify and facilitate restoration efforts" following a storm. FPUC'S RESPONSES TO STAFF'S ADDITIONAL DATA REQUESTS

In response to Staff's Follow Up Data Requests, DR #7, the Company explained the distinction between the "self-healing" project in the rate case and the "Distribution and Connectivity Automation" program in the updated SPP filed by FPUC in Docket No. 20250017-EI. Please respond to the following follow up:

1. To confirm, is the self-healing project included in the rate case essentially the SCADA system upgrades, and the SPP program entails installation of the actual equipment to self-heal?

Company Response: Yes, generally speaking, that is correct.

2. The response to Staff's 6th Data Request, No. 13, indicates that a total of 12 "units" are being installed for the self-healing project. Can you identify these "units" and where they are being installed on the system?

Company Response:

1. The devices being installed are the S&C IntelliRupter Pulse Closer Fault Interrupter that will allow the data collected by the device to determine what has occurred downstream and react accordingly. This will do both improving the reliability and help improve storm restoration by more thoroughly collecting data and reacting to keep power on where possible thereby allowing crews to work on damaged lines rather than patrol areas the could have power maintained.

2. The Company has identified the following locations that are appropriate for the installation of these twelve (12) devices. *(following page)*

Northeast Florida

FPUC'S SUPPLEMENTAL RESPONSE TO STAFF'S ADDITIONAL DATA REQUESTS, No. 1

In response to Staff's Follow Up Data Requests, DR #7, the Company explained the distinction between the "self-healing" project in the rate case and the "Distribution and Connectivity Automation" program in the updated SPP filed by FPUC in Docket No. 20250017-EI. Please respond to the following follow up:

1. To confirm, is the self-healing project included in the rate case essentially the SCADA system upgrades, and the SPP program entails installation of the actual equipment to self-heal?

Company Response: Yes, generally speaking, but to be clear, FPUC does not currently have a SCADA system installed, and SCADA is not included in either the rate case or the SPP. What is included in the rate case are the devices that will be placed out on the distribution system. These devices have the ability communicate with each other, as well as an eventual SCADA system, to sense where the faulted section of line is located.

2025 Joint Stipulation and Settlement Agreement, including implementing rates and tariffs..

ATTACHMENT A

JOINT STIPULATION AND SETTLEMENT

OF

FLORIDA PUBLIC UTILITIES COMPANY
OFFICE OF PUBLIC COUNSEL
CITY OF MARIANNA, FLORIDA
JACKSON COUNTY, FLORIDA
JACKSON COUNTY SCHOOL BOARD

E1386

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for rate increase by Florida Public Utilities Company.	DOCKET NO.: 20240099-EI

STIPULATION AND SETTLEMENT

WHEREAS, Florida Public Utilities Company ("FPUC" or "Company"), the City of Marianna, Florida ("City"), Jackson County, Florida ("County"), the Jackson County School Board ("JCSB"), and the Office of Public Counsel ("OPC") have signed this Stipulation and Settlement (the "2025 Agreement"); and

WHEREAS, unless the context clearly intends otherwise, the term "Party" or "Parties" shall mean a signatory or signatories to this 2025 Agreement; and

WHEREAS, the City, the County, the JCSB, and the OPC are collectively referred to herein as the "Consumer Parties;" and

WHEREAS, on August 22, 2024, FPUC filed a Petition with the Florida Public Service Commission ("Commission") seeking approval to increase rates and charges to produce an additional $12,593,450 in revenues, based upon a projected test year ended December 31, 2025, and requested utilization of the Commission's Proposed Agency Action ("PAA") process; and

WHEREAS, OPC filed a notice of its intervention on September 4, 2024; and

WHEREAS, the Commission issued PAA Order No. PSC-2025-0114-PAA-EI, on April 7, 2025 ("PAA Order"), wherein the Commission approved a reduced increase in base revenues of $9,675,171, as well as an increase in miscellaneous fees and charges of $164,495; and

WHEREAS, on March 20, 2025, FPUC increased its base rates to produce increased annual base revenues of $9,675,171 and increased miscellaneous fees and charges to produce annual base revenues of $164,495; and

WHEREAS, the Consumer Parties have filed timely filed petitions protesting the PAA order on April 21, 2025 and on April 24, 2025; and

WHEREAS, the Parties have endeavored in good faith to resolve the areas of disagreement in order to provide regulatory certainty with regard to FPUC's rates and to avoid the uncertainty associated with further litigation; and

WHEREAS, the American legal system, as well as the Commission, favor settlement of disputes for many reasons, including that they promote the public interest; and

E1387

WHEREAS, the Parties to this 2025 Agreement, individually and collectively, agree that this 2025 Agreement, taken as a whole, is in the public interest;

NOW, THEREFORE, in consideration of the foregoing recitals of fact, which are hereby incorporated into this 2025 Agreement, and the mutual covenants set forth herein, which the Parties agree constitute good and valuable consideration, the Parties hereby stipulate and agree as follows:

I. Term

a. This 2025 Agreement will take effect upon the date that the Commission votes to approve it. The base rates, charges and related tariff sheet terms and conditions established as a result of this 2025 Agreement will be deemed effective as of March 20, 2025, ("Implementation Date") and shall continue through September 20, 2028, and beyond, unless and until changed by Commission Order. The period from the Implementation Date through the billing cycle that includes September 20, 2028, may be referred to herein as the "Minimum Term".

b. The base rates, charges, and related tariff sheet terms and conditions set in accordance with this 2025 Agreement shall not be changed during the Minimum Term, except as otherwise permitted or provided for in this 2025 Agreement, and shall continue in effect until next reset by the Commission.

c. The Parties reserve all rights, unless such rights are expressly waived or released, expressly limited, or expressly eliminated by the terms of this 2025 Agreement.

II. Return on Equity and Equity Ratio

a. For purposes of this 2025 Agreement, the phrase "authorized ROE" shall mean the midpoint authorized return on common equity ("ROE") and the phrase "authorized ROE range" shall mean the range that starts at 100 basis points below the midpoint and extends to 100 basis points above the midpoint as determined in this 2025 Agreement. Consistent with this understanding, FPUC's authorized ROE shall be within an authorized ROE range of 9.20% to 11.20%, with a mid-point of 10.20%. FPUC's equity ratio shall be 50.04% based on investor sources and shall be used for all regulatory purposes including, but not limited to, cost recovery clauses, recovery mechanism(s), earnings surveillance reporting, authorizing a potential exit from this 2025 Agreement pursuant to Paragraph VI, the calculation of the Company's Allowance for Funds Used During Construction ("AFUDC") rate and associated amounts of AFUDC in accordance with Rule 25-

E1388

6.0141, Florida Administrative Code, and the implementation and operation of this 2025 Agreement ("Regulatory Purposes"). Customer deposits, investment tax credits, and accumulated deferred income taxes shall be the balances recorded on FPUC's books.

b. The authorized ROE, authorized ROE range, and equity ratio shall continue in effect until the return on equity is next reset by order of the Commission; however, FPUC may petition the Commission to allow it to reflect a different equity ratio for Regulatory Purposes at any time after the conclusion of the Minimum Term.

<u>III. Revenue Requirement</u>

a. Upon approval of this 2025 Agreement, the authorized annual increase in FPUC's base revenues initially approved by the PAA Order in the amount of $9,675,171, shall be reduced to $8.4 million, excluding the increase in miscellaneous fees and charges of $164,495, which shall remain in effect, as well as the substation step increase addressed separately herein. The reduction to the authorized base revenue increase will be deemed effective as of March 20, 2025.

b. The Company will defer collection of $1.0 million of the first year's agreed base rate revenue increase, such that the first-year level of base rates, effective March 20, 2025, will yield an increase in annual base revenues of $7.4 million. The deferred $1.0 million in authorized annual revenues will be collected over the subsequent three-year period through a one-time increase in base rates of $1.333 million on March 30, 2026, subject to the netting provision in subparagraph (c) herein.

c. Any difference between the amount collected from the rates that originally went into effect on March 20, 2025, with the Commission's vote of that same date, and the final revenue requirement of $8.4 million established by this 2025 Agreement, excluding the $1.0 million deferred reduction, for the period that the higher PAA Order rate levels were in effect ("One-time True-up Period"), will be netted against the $1.0 million deferral ("Net Deferral") discussed in Paragraph III b. above, in a manner that spreads the Net Deferral amount evenly over the three-year period beginning March 20, 2026.

E1389

d. The Company will file any step increase calculations resulting from FPUC's acquisition and replacement of the substation and transmission assets addressed in its filing initiating this proceeding. Using a weighted average cost of capital of 6.36%, based upon a 10.20% return on equity midpoint and an equity ratio of 50.04%, the additional allowed revenue requirement associated with these substations and transmission assets, grossed up for taxes, regulatory assessment fees, and bad debt, shall not exceed $727,778. FPUC shall be authorized to increase its base rates by the incremental revenue requirement, in the manner provided herein, associated with the substation and transmission projects once these assets are placed in service and shall accordingly file an appropriate notice of intent to implement this step increase, including proposed tariff sheets, once the assets are in service. The Parties support the PSC Staff being authorized to approve the step increase tariff sheets administratively, upon their confirmation that the rates therein will produce the correct revenues.

IV. <u>Other Cost Recovery</u>

a. Nothing in this 2025 Agreement shall preclude the Company from requesting the Commission to approve the recovery of costs that are: (a) of a type which traditionally and historically would be, have been, or are presently recovered through cost recovery clauses or surcharges, or (b) incremental costs not currently recovered in base rates which the Legislature expressly determines are clause recoverable subsequent to the approval of this 2025 Agreement. Except as provided in this 2025 Agreement, it is the intent of the Parties in conjunction with the provisions of this Paragraph IV, that FPUC shall not seek to recover, nor shall FPUC be allowed to recover, through any cost recovery clause or charge, or through the functional equivalent of such cost recovery clauses and charges, costs of any type or category that have historically and traditionally been recovered in base rates, unless such costs are: (i) the direct and unavoidable result of new governmental impositions or requirements; (ii) new or atypical costs that have not been litigated before the Commission because they were unforeseeable and could not have been contemplated by the Parties resulting from significantly changed industry-wide circumstances directly affecting FPUC's operations; or (iii) costs that would otherwise be recoverable through base rates that the Florida Legislature has expressly authorized as clause recoverable by public utilities. As part of the base rate freeze agreed to herein, FPUC will not seek Commission approval to defer for later recovery in rates, any costs incurred or reasonably expected to be incurred from the Implementation Date

E1390

through and including September 20, 2028, which are of the type that historically or traditionally have been or would be recovered in base rates, unless such deferral and subsequent recovery is expressly authorized herein or otherwise agreed to in a writing signed by each of the Parties. The Parties are not precluded from participating in any proceedings pursuant to this Paragraph IV, nor is any Party precluded from raising any issues pertinent to any such proceeding or the enforcement of this 2025 Agreement.

b. Notwithstanding the anti-deferral language in Paragraph IV a. above, the Company shall retain the ability to capitalize the specific types of costs that are the subject of, and consistent with, the Uniform System of Accounts as specified in Order No. PSC-2022-0429-PAA-PU, and shall also retain its ability to seek recovery of the net unrecovered cost of new LED lights, as specified and contemplated in Order No. PSC-2025-0091-PAA-EI.

V. Storm Damage Recovery

a. Nothing in this 2025 Agreement shall preclude FPUC from petitioning the Commission to seek recovery of costs associated with any tropical systems named by the National Hurricane Center or its successor without the application of any form of earnings test or measure and irrespective of previous or current base rate earnings.

b. Consistent with the rate design and cost allocation methods approved in the PAA Order, the Parties agree that recovery of storm costs from customers will begin, on an interim basis (subject to refund following a hearing or a full opportunity for a formal proceeding), sixty days following the filing by FPUC of a cost recovery petition and tariff with the Commission and will be based on a 12-month recovery period if the storm costs do not exceed $4.00 per 1,000 kWh on monthly residential customer bills. In the event FPUC's reasonable and prudent storm costs exceed that level, any additional costs in excess of $4.00 per 1,000 kWh shall be recovered in a subsequent year or years as determined by the Commission, after hearing or after the opportunity for a formal proceeding has been afforded to all substantially affected persons or parties. All storm related costs shall be calculated and disposed of pursuant to Commission Rule 25-6.0143, F.A.C., and shall be limited to (i) costs resulting from a tropical system named by the National Hurricane Center or its successor, (ii) the estimate of incremental costs above the level of storm reserve prior to the storm

E1391

and (iii) the replenishment of FPUC's storm reserve to the level as of March 20, 2025 with the use of this storm cost recovery mechanism. The Parties to this 2025 Agreement are not precluded from participating in any such proceedings and opposing the amount of FPUC's claimed costs or whether the proposed recovery is consistent with this Paragraph V, but not the mechanism agreed to herein.

c. The Parties expressly agree that any proceeding to recover costs associated with any storm shall not be a vehicle for a "rate case" type inquiry concerning the expenses, investment, or financial results of operations of FPUC and shall not apply any form of earnings test or measure or consider previous or current base rate earnings.

d. The provisions of this Paragraph V shall remain in effect during the Minimum Term except as otherwise permitted or provided for in this 2025 Agreement and shall continue in effect until the Company's base rates are next reset by the Commission. For clarity, this means that if this 2025 Agreement is terminated pursuant to Paragraph VI hereof, FPUC's rights regarding storm cost recovery under this 2025 Agreement are terminated at the same time, except that any Commission-approved surcharge then in effect shall remain in effect until the costs subject to that surcharge are fully recovered. A storm surcharge in effect without approval of the Commission shall be terminated at the time this 2025 Agreement is terminated pursuant to Paragraph VI herein.

VI. Earnings

a. Notwithstanding Paragraph II-Return on Equity and Equity Ratio, the Parties agree that, in the event that the Company's earned return on common equity falls below 9.20% during the Minimum Term on an FPUC compliant monthly earnings surveillance report stated on a thirteen-month average actual Commission adjusted basis, the Company may file a Petition for Rate Increase with the Commission either as a general proceeding under Sections 366.06 and 366.07, Florida Statutes, or as a limited proceeding under Section 366.076, Florida Statutes. Nothing herein shall be construed as an agreement by any of the Consumer Parties that a limited proceeding would be appropriate, and FPUC acknowledges and agrees that the Consumer Parties reserve and retain their individual and collective rights to challenge the propriety of any limited proceeding or to assert that any request for base rate changes should be properly addressed through a general rate case, as well as challenge any substantive proposals to change the Company's rates in any such future proceeding.

E1392

Throughout this 2025 Agreement, "actual Commission adjusted basis" and "actual adjusted earned return" shall mean results reflecting all adjustments to FPUC's books required by the Commission by rule or order. FPUC acknowledges that the Consumer Parties shall be entitled to participate and oppose any request initiated by FPUC to increase its rates.

b. Likewise, notwithstanding Paragraph II-Return on Equity and Equity Ratio, the Parties agree that if the Company's earned return on common equity exceeds 11.20% on an FPUC compliant monthly earnings surveillance report stated on a thirteen-month average actual Commission-adjusted basis, as further described and defined in subparagraph (a) herein, any Consumer Party may file a petition with the Commission seeking a review of the Company's rates. In any case initiated by any of the Consumer Parties, all Parties will have full rights conferred by law.

c. This Paragraph VI shall not: (i) be construed to bar FPUC from requesting any recovery of costs otherwise contemplated by this 2025 Agreement, (ii) apply to any request to change FPUC's base rates that would become effective after the expiration of the Minimum Term of this 2025 Agreement, or (iii) limit any Party's rights in proceedings concerning changes to base rates that would become effective subsequent to the Minimum Term of this 2025 Agreement to argue that FPUC's authorized ROE range should be different than as set forth in this 2025 Agreement.

VII. General Liability Reserve

a. The Parties agree that FPUC shall be authorized to increase its General Liability Reserve ("self-insurance") reserve annual accrual by $189,432.

b. The Company shall continue to report the annual balance of the general liability reserve in its annual report to the Commission, and the credit balance shall be used to offset working capital in rate base for all applicable regulatory purposes.

VIII. Rate Case Expense

Rate case expense in an amount not to exceed $1,536,000 shall be amortized over a 5-year period.

E1393

IX. Storm Accrual

The Company shall maintain its annual accrual of $121,620 to its Storm Reserve until the existing target of $1.5 million is achieved.

X. Enhanced Local Presence

a. The Parties hereto acknowledge that Company provides thirty-three (33) walk-in payment locations in and around Marianna (NW Division). Of those locations, seven (7) do not require an additional fee. On Amelia Island, the Company provides twenty-six (26) walk-in payment locations, of which nine (9) do not charge an additional fee. To improve the process of paying bills at these walk-in locations, a bar code has been added to the back of all billing statements.

b. The Company commits to add enhanced bill messaging, social media messaging, and website visibility sharing the identities and locations of these payment centers. The Company will also promote an enhanced customer support email option for Florida electric customers at customersupport@FPUC.com, which is already available to customers.

c. The Company will host periodic virtual townhall meetings for its customers, at mutually agreeable times, which will provide customers with an opportunity to speak directly with members of FPUC's team, which will include, as may be necessary, members of the Customer Care team, Operations, and Billing and Accounts team members. Customers will be able to interact with these team members via a live video feed. These sessions may, as necessary, also include break-out sessions to protect customers' identifying and account information.

d. The Company will also host periodic in-person townhall meetings in each service territory. It is the intent of the Parties hereto that the Company conduct one to two such meetings per year, as scheduling allows, in each service territory at mutually agreeable times. Noticing for such meetings will be provided in bill inserts, as well as publication in local newspapers within 7 days of such an event.

e. The Parties also agree that conducting such in-person, townhall meeting will be considered a pilot initiative, and the Company will provide follow-up reports to the Consumer Parties

E1394

and the Commission regarding the effectiveness of these events, including, but not limited to, participation by customers.

f. In addition, the Company will, at a minimum, conduct semi-annual reviews of the effectiveness of actions listed above, including conducting periodic surveys to gather customer feedback to help guide the Company's continuing improvement efforts.

XI. Effective Date

Consistent with the Minimum Term set forth in Paragraph I-Term, the Parties agree that the rates to be implemented as a result of this 2025 Agreement shall be deemed to have gone into effect on March 20, 2025.

XII. Commission Approval

a. The provisions of this 2025 Agreement are contingent upon Commission approval of this 2025 Agreement in its entirety without modification. It is the desire of the Parties that this 2025 Agreement be noticed for consideration and a Commission decision as soon as possible, but in any event, no later than June 6, 2025. The Parties agree that:

i. Consideration by the Commission of this 2025 Agreement at an appropriately noticed hearing , at which all interested persons are allowed to speak to address the 2025 Agreement, satisfies the applicable requirements of Chapter 120, Florida Statutes, for Commission action on the approval of the 2025 Agreement; and

ii. The Commission's decision approving this 2025 Agreement may be issued as a final order.

b. The Parties agree that there is good cause to expedite approval of this 2025 Agreement, in that approval of the 2025 Agreement will avoid additional litigation costs for all Parties. To the extent necessary, the Parties agree to waive:

i. Their right to require a hearing on the merits;

ii. Their respective rights to seek reconsideration of any Final Order that approves this 2025 Agreement in its entirety without change; and

E1395

iii. Their respective right to judicial review of any such final agency action approving this 2025 Agreement afforded by Section 120.68, Florida Statutes.

c. The Parties further agree they will support this 2025 Agreement and affirmatively assert that this 2025 Agreement is in the public interest and should be approved. The Parties likewise agree and acknowledge that:

i. The revenue increase and resulting rates and charges developed from and in accordance with this 2025 Agreement are fair, just and reasonable; and

ii. Approval of this 2025 Agreement promotes planning and regulatory certainty for both FPUC and its customers.

Approval of this 2025 Agreement in its entirety resolves all matters in Docket No. 20240099-EI addressed herein and the Docket will be closed effective on the date the Commission's order approving this 2025 Agreement becomes final and no longer subject to appeal.

d. No Party will assert in any proceeding before the Commission or before any court that this 2025 Agreement or any of the terms in this 2025 Agreement shall have any precedential value. The Parties' agreement to the terms in this 2025 Agreement shall be without prejudice to any Party's ability to advocate a position that differs from the terms of this Agreement in future proceedings not involving this 2025 Agreement. The Parties further expressly agree that no individual provision, by itself, necessarily represents a position of any Party in any future proceeding, and the Parties further agree that no Party shall assert or represent in any future proceeding in any forum that another Party endorses any specific provision of this 2025 Agreement by virtue of that Party's signature on, or participation in, this 2025 Agreement. It is the intent of the Parties to this 2025 Agreement that the Commission's approval of all the terms and provisions of this 2025 Agreement is an express recognition that no individual term or provision, by itself, necessarily represents a position, in isolation, of any Party or that a Party to this 2025 Agreement endorses a specific provision, in isolation, of this 2025 Agreement by virtue of that Party's signature on, or participation in, this 2025 Agreement.

XIII. Disputes

To the extent a dispute arises between or among the Parties about the provisions, interpretation, or application of this 2025 Agreement, the Parties agree to meet and confer in an effort to resolve the dispute. To the extent that the Parties cannot resolve any dispute within 30 days following such conferral, the matter may be submitted to the Commission for resolution.

XIV. Resolution of Issues

Approval of this 2025 Agreement resolves all issues in this proceeding, with the exception of issues regarding Cost of Service and Rate Design. The Consumer Parties take no position on the Cost of Service and Rate Design issues.

XV. New Rates

a. The New Rates for Year 1, calculated in accordance with Paragraph III of this 2025 Agreement and which are attached and incorporated herein as Exhibit A, shall be designed to accurately reflect the terms as presented in the 2025 Agreement, at the time of implementation. In addition, the New Rates presented in Exhibit A shall be designed in accordance with the methodology of the Cost of Service and Rate Design approved by the PAA Order, as shall each subsequent rate increase reflected herein. Tariffs reflective of the rates that will be effective March 20, 2026 and for the subsequent years of the Minimum Term will be provided within 90 days of the date a Commission Order approving this 2025 Agreement becomes final. Such rates will be reflective of the subsequent years' revenue requirements, as provided for in this 2025 Agreement, as reflected in Paragraph III, as well as the one-time netting of any overcollection, during the One-time True-up Period, in accordance with Paragraph III b. and c..

b. The Consumer Parties take no position with regard to the design of the rates and new service charges reflected therein, consistent with Paragraph XIV-Resolution of Issues, above.

c. Attached hereto and incorporated herein as Exhibit B are the appropriate tariff sheets reflecting these rate changes, which, upon Commission approval, shall become effective as of March 20, 2025.

XVI. Execution

This 2025 Agreement is dated as of May 5, 2025. It may be executed in one (1) or more counterparts, all of which will be considered one and the same 2025 Agreement and each of which will be deemed an original.

Docket No. 20240099-EI

EXHIBIT B

Revised Tariff Sheets

For Florida Public Utilities Company

(clean/legislative)

RATE SCHEDULE RS
RESIDENTIAL SERVICE

Availability

Available within the territory served by the Company in Jackson, Calhoun and Liberty Counties and on Amelia Island in Nassau County.

Applicability

Applicable for service to a single family dwelling unit occupied by one family or household and for energy used in commonly-owned facilities in condominium and cooperative apartment buildings.

Character of Service

Single-phase service at nominal secondary voltage of 115/230 volts; three-phase service if available.

Limitations of Service

The maximum size of any individual single-phase motor hereunder shall not exceed five (5) horsepower.

The Company shall not be required to construct any additional facilities for the purpose of supplying three-phase service unless the revenue to be derived therefrom shall be sufficient to yield the Company a fair return on the value of such additional facilities.

Monthly Rate

Customer Facilities Charge:

$24.40 per Customer per month

Base Energy Charge:

2.696¢/KWH for usage up to 1000 KWH's/month

4.415¢/KWH for usage above 1000 KWH's/month

Purchased Power Charges

Purchased power charges are adjusted by the Florida Public Service Commission, normally each year in January. For current purchased power costs included in the tariff, see Sheet Nos. 7.021 & 7.022.

Minimum Bill

The minimum monthly bill shall consist of the above Customer Facilities Charge.

The minimum monthly bill shall consist of the above Customer Facilities Charge plus the Demand Charge for the currently effective billing demand.

Terms of Payment

Bills are rendered net and are due and payable within twenty (20) days from date of bill.

Purchased Power Costs

See Sheet No. 7.021 & 7.022.

E1414

RATE SCHEDULE GSLD 1
GENERAL SERVICE - LARGE DEMAND 1

Availability

Available within the territory served by the Company in Jackson, Calhoun, and Liberty Counties and on Amelia Island in Nassau County.

Applicability

Applicable to commercial and industrial services of Customers contracting for at least 5,000 kilowatts of electric service.

Character of Service

Three-phase, 60 hertz, electric service delivered and metered at a single point at the available transmission voltage, nominally 69,000 volts or higher.

Monthly Base Rates

Customer Facilities Charge:	$1,104.48
Base Transmission Demand Charge:	$2.56/KW of Maximum/NCP Billing Demand
Excess Reactive Demand Charge:	$0.50 kVar of Excess Reactive Demand

Purchased Power Charges

Purchased power charges are adjusted by the FPSC annually. Current purchased power rates are listed on Sheet Nos. 7.021 and 7.022. The Purchased Power Charges recover Energy and Demand Charges billed to FPUC by FPUC's Wholesale Energy Provider and Wholesale Cogeneration Provider including applicable line losses and taxes. See Sheet Nos. 7.010 and 7.011 for the methodology used to determine purchased power rate and calculation to develop annual true-up calculations.

Minimum Bill

The minimum monthly bill is the sum of the Transmission Demand Charge and the Customer Charge plus any Purchased Power Charges attributed to Transmission Demand Fuel Charge.

Terms of Payment

Bills are rendered net and due and payable within twenty (20) days from date of bill.

Conservation Costs

Not applicable.

Franchise Fee Adjustment

Customers taking service within franchise areas shall pay a franchise fee adjustment in the form of a percentage to be added to their bills prior to the application of any appropriate taxes. This percentage shall reflect the Customer's pro rata share of the amount the Company is required to pay under the franchise agreement with the specific governmental body in which the Customer is located.

RATE SCHEDULE LS
LIGHTING SERVICE

Availability

Available within the territory served by the Company in Calhoun, Jackson and Liberty Counties and on Amelia Island in Nassau County.

Applicability

Applicable to any Customer for non-metered outdoor lighting service.

Character of Service

Lighting service from dusk to dawn as described herein.

Limitations of Service

Service is limited to lighting by high-pressure sodium vapor, metal halide, or light emitting diode lamps mounted on Company-owned poles as described herein. Company-owned facilities will be installed only on Company-owned poles.

Monthly Rate

When lighting fixtures are mounted on existing poles and served directly from existing overhead secondary distribution lines:

RATE SCHEDULE OSL
MERCURY VAPOR LIGHTING SERVICE
(Closed To New Installations)

Availability
Available within the territory served by the Company in Calhoun, Jackson and Liberty Counties and on Amelia Island in Nassau County.

Applicability
Applicable to any Customer for mercury vapor lighting service.

Character of Service
Lighting service from dusk to dawn as described herein.

Limitations of Service
Service is limited to lighting by mercury vapor lamps of 7,000 or 20,000 initial level of lumens mounted on wood poles, as described herein.

Monthly Rate
When lighting fixtures are mounted on existing poles and served directly from existing overhead secondary distribution lines:

Lamp Size Lumens	KWH/Mo. Estimate	Facilities Charge	Maintenance* Charge	Energy Charge	Total Charge
7,000	72	$1.57	$1.40	$4.19	$7.16
20,000	154	$1.73	$1.50	$9.01	$12.24

For concrete or fiberglass poles and/or underground conductors, etcetera, the Customer shall pay a lump sum amount equal to the estimated differential cost between the special system and the equivalent overhead-wood pole system.

Purchased Power Charges
Purchased power charges are adjusted by the Florida Public Service Commission, normally each year in January. For current purchased power costs included in the tariff, see Sheet Nos. 7.021 & 7.022.

Minimum Bill
The above rates times the number of lamps connected.

Terms of Payment
Bills are rendered net and are due and payable within twenty (20) days from date of bill.
