SECTION 3 - BASIC SERVICE DESCRIPTION AND RATES

3.13 Digital Subscriber Line (DSL)

Digital Subscriber Line Service (DSL) is a data communications service that provides for high-speed connectivity using Symmetric Digital Subscriber Line (SDSL) and ISDN Digital Subscriber Line (IDSL) technology. SDSL provides the customer the ability to transmit data to (upstream rate) and receive data from (downstream rate) a DSL Access Service Connection Point at the same speed using existing copper facilities. A DSL Access Service Connection Point is an interconnection point designated by the company that aggregates data traffic from and to Company DSL-equipped serving wire centers. SDSL service may be used for data communications.

Six types of DSL service are available based on the synchronous speeds chosen by the customer. Peak speeds are not guaranteed by the Company due to factors that may effect the actual speeds delivered, including the DSL Access Service customer's distance from the company's serving wire center, condition of the existing copper facilities, and the limitations in the telecommunications service provider's network design.

DSL Service will be provided over existing local exchange service facilities. When the customer orders DSL Service, the rates and charges are in addition to any rates and regulations that apply for the associated local service line provided under the terms and conditions of this tariff.

SECTION 4 - MISCELLANEOUS SERVICES

4.27 Direct Trunk Overflow

The Direct Trunk Overflow (DTO) feature, where available, gives the Customer another termination option if all of their DID trunks are busy. This all-trunks-busy condition may be caused either by legitimate heavy incoming traffic or by a trouble condition where the T-1 system is down and the 5ESS senses that trouble as an all-trunks-busy condition. During either busy condition, the incoming call attempts to terminate to the DID group. When the 5ESS sees all trunks busy, it will choose an alternate route for the call to a telephone number that is programmed in the 5ESS only. This telephone number has the Call Forward Remote feature assigned to it and forwards the call to a number chosen by the Customer.

Remote Access DTO enables the customer to activate and/or update the Call Forwarding on their DTO from any location. The customer uses a provided remote-access toll free number, the DTO Call Forwarding line and their four-digit PIN to review or change their call forwarding number.

If it is not a PAETEC network problem, then the Customer will be billed a non-recurring charge per line.
