A. M. Lemberde
Assistant Vice President-Regulatory Relations

150 South Monroe Street Suite 400 Tallahassee, Florida 32301

June 24, 1991

Mr. Walter D'Haeseleer Director, Division of Communications Florida Public Service Commission 101 East Gaines Street Tallahassee, Florida 32301 RECEIVED JUNEARIN

Dear Mr. D'Haeseleer:

Pursuant to Florida Statute 364.05 we are filing herewith revisions to our General Subscriber Service Tariff. Following are the affected pages:

# General Subscriber Service Tariff

(See Attachment I)

The purpose of this filing is to introduce additional new or newly unbundled network services which are being offered in Sections A3. and A13. of the GSST:

Service	Tariff Section
Trunk Side Access Facility	A3.28
Uniform Access Number (UAN)	A13.58
Custom Service Area (CSA)	A13.60
Automatic Number Identification (ANI)	A13.59
Call Detail Information (CDI)	A13.62

These represent additional features, as identified by the Enhanced Service Provider (ESP) industry during the ONA process. They will further enable the ESP industry, or any other customer with applications that these features could make possible, to broaden the scope of their services and make them more useful to their clients. This filing is also responsive to the Commission's order in Docket Number 880423-TP dealing with the Information Services Industry.

D'Haeseleer Ltr. Page 2

Southern Bell anticipates the total gross revenue effect of this filing to be \$783,466 in the first year.

The attachments provide additional supporting and explanatory information for the proposed tariff revisions. Attachment A and B of the Executive Summary contain a rate summary by service and a contribution analysis summary by service. Information related to the Trunk Side Access Facility is contained in Section 1 of this filing package. Section 2 addresses the remaining services. These attachments constitute a comprehensive package which fulfills the basic requirements for supporting data specified in Rule 25-9.05.

Acknowledgment, date of receipt and authority number of this filing are requested. A duplicate letter of transmittal is attached for this purpose.

Your consideration and approval will be appreciated.

Yours very truly,

am Tomback of

Assistant Vice President -Regulatory Relations

#### EXECUTIVE SUMMARY

### INTRODUCTION

This filing introduces network services offered by the Company as part of the Open Network Architecture (ONA) process. The following new network services are being offered:

Trunk Side Access Facility Uniform Access Number (UAN) Custom Service Area (CSA) Automatic Number Identification (ANI) Call Detail Information

# DESCRIPTION OF PRESENT TARIFF

The present tariffs do not offer any of these network services.

#### DESCRIPTION OF PROPOSED TARIFF

### Trunk Side Access Facility

Trunk Side Access Facility introduces rate elements for a direct trunk side termination into the public switched network via a Traffic Operator Position System (TOPS) tandem office. The Trunk Side Access Facility is required when the customer subscribes to a feature such as Automatic Number Identification.

This service provides a four-wire local loop, signaling and facility termination at the serving central office. Interoffice mileage required between the serving central office and the TOPS Tandem is recovered through Foreign Central Office or Foreign Exchange interoffice mileage charges.

Uniform Access Number (UAN)
Custom Service Area (CSA)
Automatic Number Identification (ANI)
Call Detail Information

UAN provides a LATA-wide "one-number" service via a seven-digit number that can be used for specified LATAs or calling areas in the BellSouth region. The 440 NXX will be available to UAN customers throughout the BellSouth region. The 930 NXX will be available throughout Southern Bell. Florida customers with wide service areas will benefit from being able to advertise the same seven-digit number (440-TAXI, for example) on a region-wide basis. CSA allows

T-91-297 Southern Bell - Florida Page 2 of 2

### DESCRIPTION OF PROPOSED TARIFF (Cont'd)

customers to limit the market coverage provided with UAN by blocking calls from central offices not in their service area. Call Detail Information provides detailed, rather than aggregate usage information. ANI identifies the billing telephone number of the calling party within the LATA.

A customer must subscribe to UAN in order to obtain CSA, Call Detail Information, or ANI as options.

All of these services will be provided on an inward only basis (terminating to the subscriber) via a TOPS (Traffic Operator Position System) tandem architecture. Because UAN provides a LATA-wide calling scope, toll charges may apply to the UAN subscriber depending on the location of the two serving central offices. In other words, the call originator places a "free" call that is routed through the TOPS tandem, but the UAN subscriber pays any resulting toll charge.

#### TECHNICAL INFORMATION

These new network features are generally available from both analog and digital stored program control central offices. Specific technical limitations, where applicable, are contained in the technical information section for each service.

#### REVENUE AND CONTRIBUTION INFORMATION

The estimated first year revenue and contribution from the services contained in this proposed filing are as follows:

<u>Revenue</u> <u>Contribution</u> \$783,466 \$144,204

Please refer to Attachment B for the contribution associated with

### CONCLUSION

each service.

Approval of this filing will allow the Company to bring additional new Information Age services to consumers.

T-91-297

#### TRUNK SIDE ACCESS FACILITY

#### SYNOPSIS

### INTRODUCTION

This filing introduces rate elements for a direct trunk side termination into the public switched network via a Traffic Operator Position System (TOPS) tandem office. The Trunk Side Access Facility is required when the customer chooses another feature called Automatic Number Identification (ANI).

The Trunk Side Access Facility provides a four-wire local loop, signaling and termination at the serving central office.

Interoffice mileage required between the serving central office and the TOPS Tandem is recovered through Foreign Central Office (FCO) or Foreign Exchange (FX) interoffice mileage charges.

#### DESCRIPTION OF PRESENT TARIFF

The present General Subscriber Service Tariff (GSST) does not provide a Trunk Side Access Facility as a rate element. However, Direct Inward Dialing (DID) service PBX trunks contained in Section A3. of the GSST are terminated on the trunk side of the network. Other PBX trunks and customer line facilities contained in Section A3. of the tariff are terminated on the line side of the network.

#### DESCRIPTION OF PROPOSED TARIFF

Trunk Side Access Facilities are offered on a flat rate basis and provide a four-wire local loop in most applications, signaling and associated termination at the serving central office. As with other forms of local exchange access contained in Section A3. of the tariff, the monthly rate varies according to rate group.

#### TECHNICAL INFORMATION

The standard type of supervisory signaling provided with these facilities is E&M. Both two-wire and four-wire E&M trunks require a four-wire loop because E&M leads are distance limited (approximately 600 feet). Normally, the E&M signaling must be converted to four-wire single frequency (SF) in order to extend the facility to the customer premises. Other non-standard supervisory signaling options, provided at no charge, available with Trunk Side Access Facilities are Reverse Battery (RB) and Single Frequency.

As with DID service, the customer can only receive incoming calls on Trunk Side Access Facilities.

Southern Bell - Florida Section 1 Attachment A Page 2 of 2

#### TRUNK SIDE ACCESS FACILITY

#### MARKET INFORMATION

Because these facilities are used only in conjunction with customer requests for the ANI feature, demand for the rate elements provided in this tariff is dependent on demand for ANI.

### REVENUE INFORMATION

Initially, Trunk Side Access Facilities will have negligible impact on Southern Bell revenues. First year gross revenues are estimated at \$54,793.20 with corresponding contribution of \$17,262.00.

Additional revenue information is contained in Attachment D.

#### COST INFORMATION

A cost summary for the cost/rate elements contained in this filing is provided in Attachment E.

#### CONCLUSION

Approval of these revisions will allow the customer to connect to the trunk side of the network in order to receive ANI.

Southern Bell - Florida Section 1 Attachment B Page 1 of 1

#### TRUNK SIDE ACCESS FACILITY

#### SERVICE DESCRIPTION

The Trunk Side Access Facility provides a four-wire local loop facility with signaling between the customer's premises and his serving central office. This facility is needed when the customer desires the Automatic Number Identification (ANI) feature. ANI requires direct customer termination of his lines to a Traffic Operator Position System (TOPS) Tandem office. Since the rate element for the Trunk Side Access Facility only covers the costs of the local loop, any additional channel mileage required between the customer's serving central office and the TOPS Tandem is recovered through application of the appropriate Foreign Central Office or Foreign Exchange interoffice mileage charges.

The following discussion provides a basic understanding of the relationship between the Trunk Side Access Facility, ANI and an additional feature called Uniform Access Number (UAN).

As mentioned earlier, Trunk Side Access Facilities are required when the customer subscribes to ANI. ANI is a feature that causes the local switching system to outpulse the calling party's billing number to a Centralized Automatic Message Accounting (CAMA) system, operator service system or other central office or customer premises equipment requiring calling number information.

ANI in the Open Network Architecture (ONA) environment refers to the capability of the telephone company to deliver the calling party's billing number to the ANI subscriber at the time the call is established.

The network architecture for ANI delivery to a customer requires that the call be routed to a Traffic Operator Position System (TOPS) Tandem switch. For that reason, subscription to ANI also requires the Uniform Access Number (UAN) feature. UAN provides an intraLATA single number dialing service via a unique NXX seven digit number that can be used for specified LATAs or Calling Areas in the BellSouth region.

When the calling party dials the UAN/ANI customer's number, the call is routed to the appropriate TOPS Tandem office and the call with the ANI is delivered to the customer via the Trunk Side Access Facility.

Southern Bell - Florida Section 1 Attachment C Page 1 of 1

#### TRUNK SIDE ACCESS FACILITY

#### CUSTOMER EFFECTS

The Trunk Side Access Facility tariff will not affect existing customers. However, customers desiring the ANI feature will have to replace their existing PBX trunks or business lines with Trunk Side Access Facilities.

The rates established for each Single Voice Grade Facility, MegaLink<sup>R</sup> Channel service NAR or LightGate<sup>R</sup> service NAR in the Trunk Side Access Facility tariff are the same as the corresponding rates for a regular (line side terminated) PBX trunk or NAR in each rate group.

Southern Bell - Florida Section 1 Attachment D Page 1 of 2

#### TRUNK SIDE ACCESS FACILITY

### REVENUE INFORMATION

Demand for Trunk Side Access Facilities are a function of demand for the ANI feature. The Cost, Revenue and Contribution Analysis illustrated in page 2 of this Attachment assumes that all ANI customers will be located in a Rate Group 12 exchange. TSAF-FL.WR1

# UNIFORM ACCESS NUMBER (UAN) CUSTOM SERVICE AREA (CSA)) AUTOMATIC NUMBER IDENTIFICATION (ANI) CALL DETAIL INFORMATION

#### SYNOPSIS

#### INTRODUCTION

This family of features and services is provided through a dedicated network architecture designed specifically to carry network usage for customers selecting any of these features/services:

The cornerstone of this family of features is UAN which is required for customers selecting ANI, CSA and/or Call Detail Information.

UAN allows a customer to obtain the same seven digit telephone number throughout specified LATAs or Calling Areas in the BellSouth Region. The 440 NXX will be available regionwide to UAN customers. The 930 NXX will be available Southern Bell wide. Florida customers with wide service areas will benefit from being able to advertise the same seven-digit number throughout BellSouth or Southern Bell. ANI is a type of calling number delivery service. CSA allows a UAN customer to block telephone calls from an entire Central Office. Call Detail Information provides detailed rather than aggregate usage information.

#### DESCRIPTION OF PRESENT TARIFF

The present tariffs do not offer any of these features/services on an intraLATA basis.

#### DESCRIPTION OF PROPOSED TARIFF

In addition to appropriate nonrecurring and recurring charges, there is a charge per call delivered to a UAN number.

A customer must subscribe to UAN in order to obtain CSA, Call Detail Information or ANI as options. In addition, ANI requires subscription to a Trunk Side Access Facility connected at a Traffic Operator Position System (TOPS) Tandem Office plus FCO or FX mileage from the customer's end office to the TOPS Tandem. There is an additional charge per ANI delivered.

Charges for CSA are per end office blocked. There are message charges associated with Call Detail Information in addition to appropriate nonrecurring and monthly charges.

Southern Bell - Florida 297

Section 2 Attachment A Page 2 of 2

UNIFORM ACCESS NUMBER (UAN)
CUSTOM SERVICE AREA (CSA)
AUTOMATIC NUMBER IDENTIFICATION (ANI)
CALL DETAIL INFORMATION

### TECHNICAL INFORMATION

This family of features is provided through a TOPS network architecture. ANI requires a direct trunk side termination (Trunk Side Access Facility) at a TOPS Tandem Office. UAN only customers can terminate their line facilities on the line side of their serving central offices.

### MARKET INFORMATION

There are a number of applications associated with UAN/ANI. The market for these services is expected to grow slowly initially in Florida. However, growth is expected to be more rapid in three to five years as customers become more familiar with these services.

## REVENUE INFORMATION

The estimated gross revenue effect for the initial year of service from these features is \$728,673.40.

A revenue summary is provided in Attachment D.

#### COST INFORMATION

Cost summaries for the cost/rate elements associated with these BSEs are provided in Attachment E.

Southern Bell - Florida Section 2 Attachment B Page 1 of 1

# UNIFORM ACCESS NUMBER (UAN) CUSTOM SERVICE AREA (CSA) AUTOMATIC NUMBER IDENTIFICATION (ANI) CALL DETAIL INFORMATION

#### SERVICE DESCRIPTION

UAN provides an intraLATA single number dialing service via a seven-digit number (440-XXXX) that can be used for specified LATAS or Calling Areas in the BellSouth region. The 440 NXX will be available to UAN customers throughout the BellSouth region. The 930 NXX will be available throughout Southern Bell. Customers with wide service areas benefit from being able to advertise the same seven-digit number (440-TAXI, for example) on a regionwide basis. CSA allows customers to limit their market coverage by blocking calls from central offices not in their service area. Call Detail Information provides detailed rather than aggregate usage information. ANI identifies the billing telephone number of the calling party within the LATA.

All of these services will be provided on an inward only basis (terminating to subscriber) via a TOPS (Traffic Operator Position System) tandem architecture. Because UAN provides a LATA-wide calling scope, toll charges may apply to the UAN subscriber depending on the location of the two serving central offices. In other words, the call originator places a "free" call that is routed through the TOPS tandem but the UAN subscriber pays any resulting toll charges.

A customer must subscribe to UAN in order to obtain CSA, Call Detail Information or ANI as options. For CSA, customers pay an additional monthly charge per central office blocked. Call Detail Information carries an additional nonrecurring fee to establish service, a monthly rate, and a per message charge.

ANI is a type of calling number delivery service and is perceived to be one of the most valuable ONA services. ANI is currently included on a bundled basis with Interexchange Carrier (IXC) services such as Feature Group D. As an unbundled ONA service, ANI will also be incrementally priced per number delivered in addition to the usage rate the customer will pay for UAN. This pricing methodology is consistent with competitive services such as AT&T's 800 MEGACOM Service which, in addition to the toll charges for terminating calls, provides ANI for \$.01 - .02 per call depending on volumes.

Southern Bell - Florida Section 2 Attachment C Page 1 of 1

# UNIFORM ACCESS NUMBER (UAN) CUSTOM SERVICE AREA (CSA) AUTOMATIC NUMBER IDENTIFICATION (ANI) CALL DETAIL INFORMATION

#### CUSTOMER EFFECTS

Uniform Access Number (UAN): As described in Attachment B, UAN provides an intraLATA single number dialing service via a seven-digit number (440-XXXX) that can be used for specified LATAS or Calling Areas in the BellSouth region. Florida customers with wide service areas will benefit from being able to advertise the same seven-digit number throughout Southern Bell or the BellSouth Region. For this reason, UAN may be considered cross-elastic with 800 services. An important difference between 800 service and UAN is that UAN gives the subscriber's clients the appearance that they are calling a local number and talking to someone in their area when in actuality they may be talking to someone in a remote location.

Uniform Access Number will have application among all Information Service Providers, mainly Value Added Networks (VANs) or packet networks, videotext providers and telemarketing businesses. UAN is also anticipated to have application with other large business customers who wish to publicize a local calling number for their clients. For example, a utility may want to advertise a local number for repair service in all of its serving areas.

Custom Service Area (CSA): CSA allows customers to limit their market coverage by blocking calls from central offices not in their service area. Conversely, this feature allows the subscriber to define a specific geographical area (set of Central offices) within the LATA from which he will receive telephone calls.

CSA will allow customers to precisely segregate and target potential clients based on market factors rather than local telephone service area boundaries.

Automatic Number Identification (ANI): ANI provides the capability to have the switched network deliver the subscriber's client line billing number to the subscriber at the time the call is established.

ANI will be highly useful to subscribers providing gateway type services, voice messaging services, pay-per-view, alarm and security services, and telemarketing businesses. Additional markets identified are catalog sales, banks, health and insurance, wholesale, and businesses which provide for home delivery of their products (i.e. newspapers, pizza delivery, etc.).

<u>Call Detail Information:</u> This feature is an arrangement that provides a monthly record of terminating traffic to the subscriber.

Uniform Access Number is the founding block for this set of services. All of these services require subscription to UAN.

Southern Bell - Florida Section 2 Attachment D Page 1 of 6

Uniform Access Mumber (UAK) Cost Study: 891010 Southern Bell - Florida Section 2 Attachment E Page 5 of 7

#### Summery of Costs

1	Assumptions Used in Cost Study
, ,	Study Period = 3 years.
2	Cost of Manay = 13.00% (in SC, COM = 14.05%).
3	Placeunt Rate = 12.5% = Prime Rate + 2%
4	Software: existing software is used, so there are no Right to Use Fees.
\$	He independent and offices or facilities to those offices were considered, per Network Planning.
6	The natural that runs from each and office to its serving TOPS switch is fiber.
	Henrecurring costs for UMM associated with setting up the network were aproad over five years and recovered by the forecasted number of calls, per the product manager. Service astablishment sharges reflect only those costs caused by setting up the service for a apacific ountemer.
•	Trunk mileage from each and office to its TOPS office was calculated using the V & H secondinates of each and the Route-to-Air ratio for each state.
•	Utilization levels for the natuerk interface equipment in the central offices were abtained from the Intereffice Facilities group and are as follows:  Southern Sell = 85%  South Central Sell = 80%
10	The cost of switching calls from each local end office to the UAN trunk natuork is covered by Local Service charges. The cost of switching in the TOPS switch is included in this study.
11	The average distance between TOPS and End Offices is a weighted average developed using metwork trunking data from the provious UAN study.
	Coots included in this study:  - awitshing costs in the TOPS office.  - Trunk Notwork equipment costs.  - Notwork setup: annultized over a 5-year natuork life and recovered by forecasted calls.  - Service establishment costs for a specific UAN customer.  - Billing costs.

WANZ\SUPBLARY.WR1

01/29/90 11:00 AM Automatic Number Identification (ANI) Cost Study: 891011 Southern Bell - Florida Section 2 Attachment E Page 6 of 7

Summery of Costs

Assumptions Used in Cost Study

- | 1 | Study Period = 3 years.
- | 2 | Cost of Honey = 13.80% (in SC, COH = 14.05%)
- | 3 | Discount Rate = 12.5% = Prime Rate + 2%
- 4 | Boftware: Wood only in the TOPS switch. Existing software is used.
- | 5 | Marketing time is recovered in the UAM nonrecurring study because AMI would be explained in | | detail during the UAM customer presentation.
  - 6 | No independent and offices or facilities to those offices were considered, per Network | Planning.
  - 7 | Herrocurring costs for AMI associated with setting up the natural to send AMI were spread over 5 years and received by the forecasted number of calls, per the product manager.

    | Service establishment charges reflect only those costs caused by setting up the service for a specific customer.

| Costs included in this study:

- switching costs: 1AESS, SMS-100, SESS, SMS-200 costs were weighted per the deployment forecast (which was developed using Network Access Lines).
  - . Metwork setup: annuitized over a 5-year network life and recovered by forecasted calls.
  - Service establishment costs.

Custom Serving Area (CSA) Cost Study: 891012

Southern Bell - Flo Section 2 Attachment E Page 7 of 7

#### Summery of Costs

| 3 | Discount Rate = 12.5% = Prime Rate + 2%

4 | Software: Used only in the TGPS switch. Existing software is used.

5 | Marketing time is recovered in the UAN nonrecurring study because CSA would be explained in detail during the UAN customer presentation.

6 | The forecasted number of blocked calls from each end office per customer was not provided.

| The east of blocking on 80 was therefore developed at 1%, 5% and 10% assumed levels of a call blocking. This yielded a cost range.

7 | The cost of the arrangement channel in the TDPS suitsh was agreed over the End Offices it would serve. It was assumed at least one customer would block each and office.

| Costs included in this study:

- announcement channel fixed and useage-based costs in the TOPS switch.
- . memory costs associated with the announcement channel in the TOPS switch.
- . service establishment costs in the TOPS switch (translations).

		Outgoing Only Service	<del>(N)</del>
	2000年2月次第四日第四日	Outpies Only Service provides outgoing only access to the network for residence and business customers	(N)
		Outgoing only lines are capable of accessing all exchange access lines bearing the designation of central offices of the serving exchange and additional exchanges as shown in A3.3 Local Calling Areas, of this Tariff.	INT
	C.	Residence outgoing only lims are charged on a flat rate basis at a rate equal to the associated residence individual line flat rate service for an exchange. Business outgoing only lines are offered on both a flat rate and a message rate basis at rates equal to the exchange's associated business individual line flat rate or message rate, respectively. (An outgoing only message rate line has the same allowance and charge for messages over the allowance as is applicable for a Business Message Rate Individual Line). In addition, where Local Measured Service is currently available, residence and business outgoing only lines are offered on a measured basis at the same associated measured access line and usage rates and with the same allowances as the individual (two-way) measured lines. (See A3.8 Local Exceptions)	
AND LONGING	D.	Calls to the telephone number associated with this service will be routed to an appropriate central office recording.	<del>(N)</del>
Section 2		The telephone number associated with this service will not be published.	(N)
	F.	This service will be allowed to work as the open end of Foreign Exchange Service, unless otherwise specified.	<del>(N)</del>
		unk Side Access Facility General	(N)
	THE REAL PROPERTY OF THE PARTY	trunk side connected facility allows only for termination of incoming calls to the subscriber.	(N)
	-i	he trunk side access facilities identified herein are for the provisioning of Uniform Access umber/Automatic Number Identification (ANI) service as specified in A13.58 of this Tariff.	(N)
	CA	Il facilities specified herein require termination at a Traffic Operator Position System (TOPS) Tandem  Mice. Foreign Central Office or Foreign Exchange channel mileage is required between the customer's serving Wire Center and the TOPS Tandem Office.	(N).
		Regulations	(N)
	9	adividual line and PBX trunk business customers, MegaLink® channel service and LightGate® service authorizes may subscribe to this service at their option where facilities permit.	(N)
	d	o local measured or message rate service charges or long distance message telecommunications service parass will be collected from end users for calls to a Uniform Access Number customer.	(N)
		ormal service charges, as specified in Section A4, of this Tariff will apply.	(N)

# A13. MISCELLANEOUS SERVICE ARRANGEMENTS

3.58 Uniform Access Number (UAN) for LATA-wide Service (Cont'd)	(N)
13.58.1 Description of Service (Cont'd)	(N)
A. (Cont'd)	(N)
3. UAN can be delivered through a line side connection or a trunk side connection as specified in A3.28 of this Tariff, but not simultaneously for the same dedicated NXX number. A trunk side connection is required if UAN is used with Automatic Number Identification (ANI).	(N)
4. Line Side connections are made through regular exchange access lines (e.g., individual business lines, PBX trunk etc.). Trunk side connections are made via Trunk Side Access Facilities.	(N)
5. Nonrecurring charges apply for each UAN per Traffic Operator Position System (TOPS) tandem office.  Where more than one UAN is established at the same TOPS tandem location for the same customer and the UANs are ordered and installed at the same time, the first nonrecurring charge rate element applies to the first UAN. Each additional UAN number will be billed at the additional service installed rate. The same nonrecurring charges and application apply per TOPS tandem for number changes requested by the customer subsequent to the original UAN assignment.	(N)
6. Number changes required for Company reasons will not incur the Service Establishment Charge.	(N)
<ol> <li>A customer may reserve UANs to meet his specified growth requirements at specific locations. In the event the customer elects not to be provided with reserved UANs, assignment of these UANs cannot be assured.</li> </ol>	(N)
8. This service includes preassigned UANs. Such telephone numbers will be removed from reserved status and assigned as active UANs as requested by the customer.	(N)
<ol> <li>The assignment of UANs is made at the discretion of the Company. Special numbers are furnished subject to the availability of numbers.</li> </ol>	(N)
10. The service is furnished subject to the availability of UANs.	(N)
11. Limitations and use of service as stated in Section A2. of this Tariff will apply.	(N)
12. Calls to a disconnected UAN will be routed to intercept over announcement facilities; however, the announcement provided will not refer the caller to another telephone number.	(N)
Directory Listing may be provided for UAN service at rates applicable for additional business or foreign listing as covered in Section A6. of this Tariff.	(N)
14. He less recovered or message rate service charges or long distance message telecommunications service charges will be collected from and users for calls to a Uniform Access Number customer.	(N)
15. Access to UAN may not be available to certain classes of service.	(N)
13.58.2 Regulations	(N)
A. A UAN can be used for only one customer in an NPA. All usage will be combined and billed per account per Revenue Accounting Office.	(N)
B. The UAN monthly rate is applicable on a per telephone number per TOPS tandem office basis.	(N)
C: The customer must be located within the same state as the TOPS office that is providing LATA-wide UAN service.	(N)
B. LIAN service will be provided within a maximum of thirty (30) days after the customer's request for service has	(N)

in order to allow the Company sufficient time for implementation.
