TARIFF FORMAT

- A. Sheet Numbering - Sheet numbers appear in the upper-right corner of the sheet. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between existing sheets with whole numbers, a decimal is added. For example, a new sheet added between Pages 34 and 35 would be 34.1.
- B. Sheet Revision Numbers - Revision numbers also appear in the upper-right corner of the sheet. These numbers are used to determine the most current sheet version on file with the Commission. For example, the 4th revised Sheet 34 cancels the 3rd revised Sheet 34. Because of deferrals, notice periods, etc., the most current sheet number on file with the Commission is not always the tariff sheet in effect. Consult Check Sheet for the sheet currently in effect.
- C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level of coding.

- D. Check Sheets - When a tariff filing is made with the Commission, an updated check sheet accompanies the tariff filing. The Check Sheet lists the sheets contained in the tariff, with a cross-reference to the current revision number. When new sheets are added, the Check Sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this sheet if these are the only changes made to it (i.e., the format, etc., remains the same, just revised revision levels on some sheets). The tariff user should refer to the latest Check Sheet to find out if a particular sheet is the most current sheet on file with the Commission.

SECTION 3 - DESCRIPTION OF SERVICE AND RATES

3.1 Timing of Calls

3.1.1 Customer time begins when the Company receives signaling to detect that the network connection between the calling party and the Carrier network has been established. For Operator Station and Person-to-Person calls, chargeable time will not begin until the final connection is established between the calling party and the called party. No charge will apply to Person-to-Person calls for which the designated party or agreed alternate is unavailable. In all cases, chargeable time ends when either party disconnects.

There are no charges incurred if a call is not completed.

The minimum length of a call for billing purposes is sixty (60) seconds, unless otherwise specified under the individual description of service contained in this tariff.

3.2 Start of Billing

For billing purposes, the start of service is the day following acceptance by the customer of Carrier's service or equipment. The end of service date is the last day of the minimum notification of cancellation or any portion of the last day, after receipt by Carrier of notification of cancellation.

3.3 Interconnection

Service furnished by Carrier may be interconnected with services or facilities of other authorized communications common carriers and with private systems, subject to the technical limitations established by Carrier. Service furnished by Carrier is not part of a joint undertaking with such other carriers. Any special interface equipment of Carrier and other participating carriers shall be provided at the customer's expense.

Customer is responsible for taking all necessary legal steps for interconnecting his customer-provided terminal equipment or communications systems with Carrier's. The customer shall secure all licenses, permits, right-of-ways, and other arrangements necessary for such interconnection.

Carrier's service may be used with or terminated in customer provided terminal equipment or customer provided communication systems, such as teleprinters, handsets, or data sets. Such terminal equipment shall be furnished and maintained at the expense of the customer, except as otherwise provided. The customer is responsible for all costs at his premises, including customer personnel, wiring, electrical power, and the like incurred in his use of carrier's service.

3.4.1 When terminal equipment is used, the equipment shall comply with the minimum protective criteria set forth within the telecommunications industry and shall not interfere with service furnished to other customers. Any necessary additional protective equipment shall be employed at the customer's expense.

3.4.2 The power of the signal which may be applied by the customer-provided equipment at the point of termination will be specified by the Carrier for each application, to be consistent with the signal power allowed on the telecommunications network.

To protect the telecommunications services from interference at frequencies which are above the band of service provided, the carrier will specify the acceptable signal power to be applied by the customer provided equipment or communications system at the point of termination to insure that the input to the facilities does not exceed acceptable limits.

3.4.3 The customer shall ensure that his terminal facilities are of the proper mode, band-width, power, data, speed and signal level for the intended use of the customer, and that the signals do not damage Carrier's equipment, injure personnel or degrade service to other customers.

3.4.4 If the customer fails to maintain and operate his terminal equipment properly, Carrier may require the use of protective equipment at the customer's expense. If this fails to produce satisfactory quality and safety of service, Carrier may, upon written notice, terminate the customer's service.

3.5 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between rate centers associated with the originating and terminating points of the call.

The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate centers involved. The company uses the rate centers and associated vertical and horizontal coordinates that are produced by Bell Communication Research in their NPA-NXX V&H Coordinate Tape and AT&T Tariff.

Formula:
$$V \quad / \quad \frac{(V1 - V2)^2 + (H1 - H2)^2}{10}$$

3.6 Minimum Call Completion Rate

The customer can expect a call completion rate of 99% per 100 calls attempted during peak use periods for all Feature Group D (1+) services.

3.7 Special Services

For the purpose of this tariff, a Special Service is deemed to be any service requested by the customer for which there is no prescribed rate in this tariff. Special Services charges will be developed on an individual case basis and filed in this tariff.

3.7.1 Specific Regulations

Special Service charges will be based on the estimated cost of furnishing such services including cost of operating and maintaining such a service, the cost of equipment and materials used in providing such a service, the cost of installation including engineering, labor supervision, transportation, and the cost of any other specific item associated with the particular Special Service request.

3.8.1 Message Toll Service (MTS)

MTS service is a measured use, full time service and is offered on a monthly basis, utilizing inter-city communications facilities shared among multiple users.
