Dear Commissioner Gary F. Clark,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Delta Jones
3900 14th St N Naples, FL 34103-2313

Dear Commissioner Gary F. Clark,

I have had solar electric panels on my roof since 2012. Changes to net metering would have a devastating impact on our economy at a time when we can least afford it. Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets. Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country. Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

The climate crisis is making hurricanes more frequent and stronger. Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
David Reeves

Dear Commissioner Gary F. Clark,

As a hurricane Michael and Sally survivor, solar energy is a must-have in Florida and net metering makes it possible to afford.

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. Dear Commissioner Gary F. Clark,

The Solar industry in Florida has one of the greatest potentials of many states. Many of us have done the right thing and installed solar panels. The state enjoys cleaner air because of it. Many people have jobs because of the popularity of solar.

If the utility companies are allowed to do away with net metering solar system sales will plummet and many people will lose their jobs. Also, the loss of net metering will have a detrimental financial impact on homeowners who were responsible and invested several thousand dollars for solar systems.

The greed and monopoly style policies of the utility companies must stop.

Please defend solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Cynthia Houk

As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way. Since placing solar panels last year I have been pleased to see how much power I am generating for the system without cost to FPL. please make sure net metering is continued and with at we can continue improving the resilience of our communities and state.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.
