Principal Strategic & Systems Planner

Florida Public Service Commission Greg Davis and Phillip Ellis Division of Engineering 2540 Shumard Oak Blvd. Tallahassee, FL 32399-0850

E-Filing addresses: <u>GDavis@psc.state.fl.us</u>; <u>PEllis@psc.state.fl.us</u>

Re: FMPA's 2025 Ten-Year Site Plan Data Request #1

May 1, 2025

Dear Greg and Phillip:

Pursuant to the Commission's 2025 Data Request #1, dated February 20, 2025, FMPA is hereby filing one electronic copy of its Response (both narrative and non-narrative).

Under separate cover as directed by the Commission, FMPA will submit an electronic PDF copy of combined narrative and non-narrative responses to the Office of Commission Clerk.

Please do not hesitate to contact me at (321) 239-1048 if you have any questions.

Sincerely,

Robert Nelcoski Principal Strategic and Systems Planner

Enc.

cc. File

**Instructions:** Accompanying this data request is a Microsoft Excel (Excel) document titled "Data Request #1.Excel Tables," (Excel Tables File). For each question below that references the Excel Tables File, please complete the table and provide, in Excel Format, all data requested for those sheet(s)/tab(s) identified in parenthesis.

#### **General Items**

1. Please provide an electronic copy of the Company's Ten-Year Site Plan (TYSP) for the current planning period (2025-2034) in PDF format.

The TYSP information was provided electronically on March 28, 2025.

2. Please provide an electronic copy of all schedules and tables in the Company's current planning period TYSP in Excel format.

The TYSP information was provided electronically on March 28, 2025.

- 3. Please refer to the Excel Tables File tabs listed below. Complete the tables by providing information on the financial assumptions and financial escalation assumptions used in developing the Company's TYSP. If any of the requested data is already included in the Company's current planning period TYSP, state so on the appropriate form.
  - a. Excel Tables File (Financial Assumptions)
  - b. Excel Tables File (Financial Escalation)

The information has been provided as requested.

#### **Load & Demand Forecasting**

#### Historic Load & Demand

- 4. [Investor-Owned Utilities Only] Please refer to the Excel Tables File (Hourly System Load). Complete the table by providing, on a system-wide basis, the hourly system load in megawatts (MW) for the period January 1 through December 31 of the year prior to the current planning period. For leap years, please include load values for February 29. Otherwise, leave that row blank.
  - a. Please also describe how loads are calculated for those hours just prior to and following Daylight Savings Time (March 10, 2024, to November 3, 2024).

#### FMPA is not an Investor-Owned Utility.

5. Please refer to the Excel Tables File (Historic Peak Demand). Complete the table by providing information on the monthly peak demand experienced during the three-year period prior to the current planning period, including the actual peak demand experienced, the amount of demand response activated during the peak, and the estimated total peak if

demand response had not been activated. Please also provide the day, hour, and system-average temperature at the time of each monthly peak.

The information has been provided as requested.

#### Forecasted Load & Demand

6. Please identify the weather station(s) used for calculation of the system-wide temperature for the Company's service territory. If more than one weather station is utilized, please describe how a system-wide average is calculated.

The 13 FMPA ARP participants that purchase capacity and energy from FMPA range in location from Gadsden County in the Big Bend to Monroe County, including Key West. As a power supply project, the ARP does not have a service territory. FMPA used the temperature at the Orlando International Airport as a statewide average in responding to Question #5, but in the development of the forecast, various weather stations within or near our participants' service territories are used.

For purposes of analyzing and forecasting ARP energy requirements, monthly weather data from the following weather stations are utilized:

- Ft. Pierce-St. Lucie County Int'l Airport
- Gainesville Regional Airport
- Jacksonville Beach
- Key West Int'l Airport
- Orlando Int'l Airport
- Tallahassee Airport
- Tampa Airport
- West Palm Beach

For purposes of analyzing ARP peak demand data, daily weather data from the following weather stations are utilized:

- Gainesville Regional Airport
- Orlando Int'l Airport
- West Palm Beach
- 7. Please explain, to the extent not addressed in the Company's current planning period TYSP, how the reported forecasts of the number of customers, demand, and total retail energy sales were developed. In your response, please include the following information:
  - a. Methodology.
  - b. Assumptions.
  - c. Data sources.
  - d. Third-party consultant(s) involved.
  - e. Anticipated forecast accuracy.
  - f. Any difference/improvement(s) made compared with those forecasts used in the Company's most recent prior TYSP.

a) Methodology: FMPA bases its forecast of demand and energy for the ARP on econometric models that have been developed over the years to correlate each of FMPA's All Requirements Project (ARP) Participant's historical energy requirements with demographic and economic variables associated with each ARP Participant's service territory, while also reflecting local issues and trends. These models, when supplied with economic and demographic data forecasts as input, produce a forecast of monthly energy usage by ARP Participant. FMPA then adds the anticipated losses across the relevant transmission systems used by FMPA to deliver capacity and energy to its All-Requirements Customers to the monthly energy usage by ARP Participant to produce a Net Energy for Load (NEL) at the generation level. Peak demand is then derived based on an analysis of historical load factors.

#### b) General assumptions:

- i) The future influence on energy sales of the economic, demographic, and weather factors, on which the econometric models are based, was assumed to be similar to the estimated influence of such factors generally over the period 1994 through September 2024.
- ii) Although the econometric models implicitly account for the historical relationships between energy usage and the following factors to the extent they have occurred in the past, the 2025 Load Forecast does not explicitly reflect extraordinary potential future effects of: (a) increases in appliance design efficiency or building insulation standards; (b) significant conservation efforts, including those funded by the ARP, the state of Florida, and the federal government, that are not a function of changes in electricity or natural gas prices; (c) development of substitute energy sources, or demand-side generation; (d) consumers switching to traditional or new types of electrical appliances from other alternatives; (e) consumers switching from electrical appliances to other alternatives; or (f) variations in load that might result from legal, legislative, regulatory, or policy actions.
- iii) The recent average historical relationships between annual summer and winter non-coincident demands and annual NEL and between monthly NCP demands and annual winter and summer NCP demands were assumed to represent reasonable approximations of future load relationships between demands and energy requirements.
- iv) Data regarding the historical impacts of load management resources operated by the Participants and reported to FMPA are assumed to be accurate (note: Participants' peak load management activities have ceased, effective September 30, 2015).
- v) The data regarding the ARP Conservation Program, including historical participation and marginal impacts, are assumed to be accurate. nFront Consulting LLC has independently reviewed and assisted in the development of the marginal impact estimates of the programs and believes them to be reasonable. nFront Consulting LLC has prepared, with FMPA's assistance, simplified projections of Conservation Program activity and load impacts,

which reflect that projected load impacts will not exceed FMPA's threshold for explicit inclusion in the Load Forecast of 0.5 percent of load over the 20-year planning horizon. To the extent the Conservation Program expands in a significant way relative to these projections, the future impacts may have a significant impact on future loads to be served by the ARP not captured herein.

vi) Data regarding installed distributed generation as part of FMPA's Net Metering Program are assumed to be accurate and represent all distributed generation (other than certain generation resources utilized by the Participants for emergency purposes). nFront Consulting LLC has prepared, with FMPA's assistance, a simplified projection of impacts from FMPA's Net Metering Program, which reflect that load impacts will exceed FMPA's threshold for explicit inclusion in the Load Forecast of 0.5 percent of load over the 20-year planning horizon. Consequently, FMPA has included the estimated effects of net metering in the 2025 load forecast. FMPA intends to continue to monitor the trend in installations of distributed generation across the Participants' systems and adapt future forecasts accordingly.

#### c) Data Sources and assumptions:

- i) Historical Participant retail sales, customer accounts, electric sales, and revenues are gathered and analyzed. Within this process, data on the estimated impact of the ARP Conservation Program for each Participant are collected and tracked. Similarly, the level of activity and estimated impacts of the ARP Net Metering Program are tracked and projected. Estimated Conservation and Net Metering Program impacts are compared to a planning threshold for potential incorporation of such impacts explicitly into the forecast.
- ii) Historical and projected economic and demographic data were also provided by the Bureau of Economic and Business Research at the University of Florida and Woods & Poole Economics, Inc. (both nationally recognized providers of such data).
- iii) Weather data was provided by the National Oceanic and Atmospheric Administration (NOAA) for a variety of weather stations in close proximity to the ARP Participants and was used to produce the forecast on a weather-normalized basis. Weather conditions assumed over the forecast horizon are on a weighted average over 30-years reflecting greater weight toward data over the most recent 10-years to capture the significantly warmer conditions that have prevailed over this period. For purposes of comparing actual data to forecast data, we weather-normalize (i.e., mathematically adjust) actual

<sup>&</sup>lt;sup>1</sup> The primary weather determinants used in the forecast are heating and cooling degree days, which measure differences in daily average temperature from 65 degrees Fahrenheit (dF). Cooling degree days are the summation of positive differences in daily average temperature from 65 dF; heating degree days are the summation of the absolute value of negative differences.

energy usage data to estimate energy requirements had the weather been normal.

- iv) Real Electricity Price Data was derived from the information gathered in item i (above).
- v) EV historical data regarding light duty vehicle totals and electric vehicles registered in each of the counties surrounding the ARP Participants was obtained from the Florida Department of Motor Vehicles. Projections regarding EV adoption were developed from three sources, specifically the EIA AEO 2023 (Low Adoption Case), Wood Mackenzie (Base Adoption Case), and Bloomberg New Energy Finance (High Adoption Case). EV charging energy requirements and demand profiles were drawn generally from data produced in NREL's EVI-Pro Lite tool and reflect that a small portion of EVs will charge during off-peak periods.
- d) Third Party Consultants: FMPA contracted with nFront Consulting LLC to prepare the load forecast.
- e) Anticipated forecast accuracy: Historically, over the last five years, the forecast has been within approximately 2% of actuals (when compared to weather adjusted actuals). With respect to long-term forecast accuracy, FMPA actively manages the forecast process annually to support this level of performance over the long-term forecast horizon.
- f) Improvements and Issues Being Monitored:
  FMPA recurrently evaluates severe weather scenarios. These scenarios simulate coldstressed temperatures at weather stations near the ARP loads to determine the
  differential that could be experienced with persistent cold as compared to various
  prior winter peak conditions (e.g., 1989 and 2010 winters, 90% confidence interval
  for HDD) when controlling for organic load growth that has occurred (absent weather
  deviations) since that time. Such scenarios, among other scenarios, are considered in
  operational planning to support reliable dispatch of wholly owned natural gas
  generation. FMPA has implemented weatherization of wholly owned natural gas units
  as deemed necessary. FMPA intends to continue to maintain dual-fuel capabilities on
  certain wholly owned units as specified in the 2025 TYSP and maintain natural gas
  reserves into the future to support reliable operations in extreme weather.
- 8. Please identify all closed and open Florida Public Service Commission (FPSC) dockets and all non-docketed FPSC matters which were/are based on the same load forecast used in the Company's current planning period TYSP.
  - FMPA does not have any open or closed FPSC dockets, or non-docketed FPSC matters currently based on the load forecast used in the 2025 TYSP.
- 9. Please explain if your Company evaluates the accuracy of its forecasts of customer growth and annual retail energy sales presented in its past TYSPs by comparing the actual data for a given year to the data forecasted one, two, three, four, five, or six years prior.

- a. If your response is affirmative, please explain the method used in your evaluation, and provide the corresponding results, including work papers, in Excel format for the analysis of each forecast presented in the TYSPs filed with the Commission during the 20-year period prior to the current planning period. If your Company limits its analysis to a period shorter than 20 years prior to the current planning period, please provide what analysis you have and a narrative explaining why your Company limits its analysis period.
- b. If your response is negative, please explain.

FMPA does not have any retail energy sales. FMPA provides wholesale energy to Member Participants in the All-Requirements Project. FMPA updates our load forecast on an annual basis and does not view variance decomposition for periods longer than 5 years to provide meaningful information for planning purposes due to a wide range of factors, such as (i) dated economic projections, (ii) periods of above or below average economic expansion or contraction that greatly skew the underlying variance contribution of the statistical models upon which projections were based, and importantly (iii) the number of Participants in the All Requirements Project, which has not remained constant over a 20 year historical period (and which would influence the load projected at a given point in time that would have assumed a specific set of Participants for whom current load obligations may have ceased or changed). FMPA does work with nFront Consulting LLC to examine weather-adjusted projections for the prompt year as compared to actual energy sales. The table below provides FMPA's internal estimates of weather-adjusted variance to actual net energy load over the most recent 5 years of available data.

Year	Variance
2020	0.5%
2021	1.7%
2022	-1.0%
2023	-0.5%
2024	0.03%

FMPA also works within the FRCC Resource Subcommittee on FRCC-level variance decomposition summaries on a longer time scale, which are available for review as part of the FRCC's annual work products. Such reports represent raw variance that does not account for weather normalization or other compound factors noted above that may influence total FRCC load.

- 10. Please explain if your Company evaluates the accuracy of its forecasts of Summer/Winter Peak Energy Demand presented in its past TYSPs by comparing the actual data for a given year to the data forecasted one, two, three, four, five, or six years prior.
  - a. If your response is affirmative, please explain the method used in your evaluation, and provide the corresponding results, including work papers, in Excel format for the analysis of each forecast presented in the TYSPs filed with the Commission during the 20-year period prior to the current planning period. If your Company limits its analysis

to a period shorter than 20 years prior to the current planning period, please provide what analysis you have and a narrative explaining why your Company limits its analysis period.

b. If your response is negative, please explain why.

FMPA does not have any retail energy sales. FMPA provides wholesale energy to Member Participants in the All-Requirements Project. FMPA updates our load forecast on an annual basis and does not view variance decomposition for periods longer than 5 years to provide meaningful information for planning purposes due to a wide range of factors, such as (i) dated economic projections, (ii) periods of above or below average economic expansion or contraction (e.g. Great Recession) that greatly skew the underlying variance contribution of the statistical models upon which projections were based, and importantly, (iii) the number of Participants in the All Requirements Project, which has not remained constant over a 20 year historical period (and which would influence the load projected at a given point in time that would have assumed a specific set of Participants for whom current load obligations may have ceased or changed). FMPA does work with nFront Consulting LLC to examine weather-adjusted projections for the prompt year as compared to actual peak demand. The table below provides a weather-adjusted variance to actual for system peak demand over the past 5 years.

Year	Variance
2020	-1.0%
2021	-0.6%
2022	0.2%
2023	-0.4%
2024	-0.5%

FMPA also works within the FRCC Resource Subcommittee on FRCC-level variance decomposition summaries on a longer time scale, which are available for review as part of the FRCC's annual work products. Such reports represent raw variance that does not account for weather normalization or other compound factors noted above that may influence total FRCC load.

- 11. Please explain any historic trends or other information as requested below in each of the following components of Summer/Winter Peak Demand:
  - a. Demand Reduction due to the Company's demand-side management program(s) and Self Service, by customer type (residential, commercial, industrial) as well as Total Customers, and identify the major factors that contribute to the growth/decline in the trends.
  - b. Demand Reduction due to Demand Response, by customer type (residential, commercial, industrial), and identify the major factors that contribute to the growth/decline of the trends.
  - c. Total Demand, and identify the major factors that contribute to the growth/decline in the trends.

d. Net Firm Demand, by the sources of peak demand appearing in Schedule 3.1 and Schedule 3.2 of the current planning period TYSP, and identify the major factors that contribute to the growth/decline in the trends.

Please refer to the responses provided in Questions #7 and #12, which reflect the same trends and drivers that impact peak demand and demand-side management.

- 12. Please explain any <u>current and forecasted</u> trends or other information as requested below in each of the following components of Summer/Winter Peak Demand:
  - a. Demand Reduction due to the Company's demand-side management program(s) and Self Service, by customer type (residential, commercial, industrial) as well as Total Customers, and identify the major factors that contribute to the growth/decline in the trends.
  - b. Demand Reduction due to Demand Response, by customer type (residential, commercial, industrial), and identify the major factors that contribute to the growth/decline of the trends.
  - c. Total Demand, and identify the major factors that contribute to the growth/decline in the trends.
  - d. Net Firm Demand, by the sources of peak demand appearing in Schedule 3.1 and Schedule 3.2 of the current planning period TYSP, and identify the major factors that contribute to the growth/decline in the trends.

In aggregate, usage has been relatively flat in both the residential and non-residential sectors after controlling for weather variation from normal conditions. There are countervailing factors that influence usage. In general, declines in electricity prices and population growth has led to a small upward impact on usage, absent recent increases in prices driven from recently high natural gas prices. Concurrently, a continued orientation to conservation, and continued improvement in energy efficiency, driven primarily from technological advances, equipment standards, and building codes, places downward pressure on average usage. FMPA continually monitors usage trends across our Members as part of our load forecasting process. These impacts have been offset by strong customer count gains in certain areas of the All-Requirements Project Participant service territories. FMPA continually updates estimates of our Conservation Program and Net Metering Program impacts to determine if incremental adjustments to the forecast are warranted. Over the last several years, electric vehicles (EV) have been adopted in increasing numbers. Given the significance of this trend, the 2025 Load Forecast includes a projection of the future impact of EV charging energy. Additionally, please refer to the responses provided in Question #7, which reflect the demand-side management and conservation programs.

13. **[FEECA Utilities Only]** Do the Company's energy and demand savings amounts reflected on the DSM and Conservation-related portions of all energy and demand savings schedules (Schedules 2.1, 2.2, and 2.3 for energy savings and Schedules 3.1, 3.2, and 3.3 for demand savings) reflect the Company's goals that were approved by the Commission in the 2024 FEECA Goalsetting dockets? If not, please explain what assumptions are incorporated within those amounts, and why.

### FMPA is not a FEECA Utility.

- 14. Please explain any anomalies caused by non-weather events with regard to annual historical data points for the period 10 years prior to the current planning period that have contributed to the following, respectively:
  - a. Summer Peak Demand.
  - b. Winter Peak Demand.
  - c. Annual Retail Energy Sales.

The 2020 COVID-19 pandemic created abnormalities in terms of offsetting shifts in consumption between customer classes, most notably between residential and commercial classes across certain ARP participant systems. FMPA's consumption patterns since that time have generally recovered to normalcy relative to the 2020 pandemic.

- 15. Please provide responses to the following questions regarding the weather factors considered in the Company's retail energy sales and peak demand forecasts:
  - a. Please identify, with corresponding explanations, all the weather-related input variables that were used in the respective Retail Energy Sales, Winter Peak Demand, and Summer Peak Demand models.
  - b. Please specify the source(s) of the weather data used in the aforementioned forecasting models.
  - c. Please explain in detail the process/procedure/method, if any, the Company utilized to convert the raw weather data into the values of the model input variables.
  - d. Please specify with corresponding explanations:
    - (1) How many years' historical weather data was used in developing each retail energy sales and peak demand model.
    - (2) How many years' historical weather data was used in the process of these models' calibration and/or validation.
  - e. Please explain how the projected values of the input weather variables (that were used to forecast the future retail energy sales or demand outputs for each planning years 2025–2034) were derived/obtained for the respective retail energy sales and peak demand models.

Please refer to our response for Question #6 and Question #7, which define the heating and cooling degree day variables utilized in our load forecast. In addition to such variables, the load forecast also utilizes the following variables:

- Peak temperature on the peak day
- Peak temperature on the day preceding the peak day
- Lagged/leading degree day variables, which are used to account for disparities between retail sales driven from bill cycles and actual energy delivered to a Participant (as retail sales reflect aggregation that spans more than one contiguous month).

FMPA works with nFront Consulting LLC to source weather data from the National Oceanic and Atmospheric Association for all weather variables. The historical period of data utilized

aligns with the study period for the load forecast, as described in Question #7 above. For future projections, we utilize a rolling 30-year average for monthly degree days, and when necessary, an appropriate averaging period for daily peak temperature data that aligns with our study period (generally 1994 through September 2024).

- 16. [Investor-Owned Utilities Only] If not included in the Company's current planning period TYSP, please provide load forecast sensitivities (high band, low band) to account for the uncertainty inherent in the base case forecasts in the following TYSP schedules, as well as the methodology used to prepare each forecast:
  - a. Schedule 2.1 History and Forecast of Energy Consumption and Number of Customers by Customer Class.
  - b. Schedule 2.2 History and Forecast of Energy Consumption and Number of Customers by Customer Class.
  - c. Schedule 2.3 History and Forecast of Energy Consumption and Number of Customers by Customer Class.
  - d. Schedule 3.1 History and Forecast of Summer Peak Demand.
  - e. Schedule 3.2 History and Forecast of Winter Peak Demand.
  - f. Schedule 3.3 History and Forecast of Annual Net Energy for Load.
  - g. Schedule 4 Previous Year and 2-Year Forecast of Peak Demand and Net Energy for Load by Month.

#### FMPA is not an Investor-Owned Utility.

- 17. Please address the following questions regarding the impact of all customer-owned/leased renewable generation (solar and otherwise) and/or energy storage devices on the Utility's forecasts.
  - a. Please explain in detail how the Utility's load forecast accounts for the impact of customer's renewables and/or storage.
  - b. Please provide the annual impact, if any, of customer's renewables and/or storage on the Utility's retail demand and energy forecasts, by class and in total, for 2025 through 2034.
  - c. If the Utility maintains a forecast for the planning horizon (2025-2034) of the number of customers with renewables and/or storage, by customer class, please provide.

FMPA collects detailed data on all customer-owned generation as part of the ARP's Net Metering Program. As of the development of the 2025 Load Forecast, the ARP had an estimated 52.9 MW-AC of nameplate distributed solar PV renewable generation (solar DG) connected to the grid. The forecast of ARP energy for long term planning purposes has been reduced by the expected amount of incremental solar DG added over the forecast horizon. Projections of solar DG impacts were based on a combination of approaches to forecast solar DG penetration across the Participants and reasonable assumptions regarding production profiles, system degradation, and the PV production that can be expected during ARP peaks. The estimated impact on energy and peak demand is approximately 4.7 percent by 2034.

FMPA's projection of customer-owned generation on a unit basis reflects growth from approximately 7,000 units to approximately 21,000 units by 2034, which is commensurate with the estimated 4.7 percent demand and energy impact by the end of the study period

## Plug-in Electric Vehicles (PEVs)

18. Please refer to the Excel Tables File (PEV Charging). Complete the table by providing estimates of the requested information within the Company's service territory for the current planning period. Direct current fast charger (DCFC) PEV charging stations are those that require a service drop greater than 240 volts and/or use three-phase power.

The All-Requirements Project is a wholesale power supply project and as such, does not have a service territory. FMPA does not collect this information on behalf of the ARP Participants.

19. Please describe what method(s) the Utility has used, if any, to address the impact of PEVs charging on seasonal peak demand, including any special rates or tariffs, demand-side management programs (including PEV-centric demand response), customer education, or other means. As part of your response, identify each and provide the estimated impact on seasonal peak demand.

The All-Requirements Project is a wholesale power supply project and as such, does not have programs or tariffs for retail customers.

- 20. Please explain any historic trends related to the following:
  - a. PEV counts
  - b. PEV charging installation counts
  - c. Annual energy consumption
  - d. Seasonal Peak Demand (Summer and Winter)

The All-Requirements Project is a wholesale power supply project and as such, does not have a service territory. FMPA does not collect this information on behalf of the ARP Participants.

- 21. Please explain any <u>current or forecasted</u> trends related to the following:
  - a. PEV counts
  - b. PEV charging installation counts
  - c. Annual energy consumption
  - d. Seasonal Peak Demand (Summer and Winter)

The 2025 forecast includes estimates of the future impact of PEV charging energy. Estimates of historical PEV penetration across the ARP were developed from data obtained from the Florida Department of Motor Vehicles and extrapolated into the future based on publicly available national forecasts. Utilizing industry assumptions regarding PEV charging consumption and load profiles taken from the National Renewable Energy Laboratory's EVI-Pro Lite Tool, projections of PEV counts were translated into impacts on ARP NEL and peak demand. These estimates reflect consumption per PEV of approximately 3,800 kWh per year and demand coincident with the ARP summer peak of 0.8 kW, the latter reflecting a

significant diversity of charging behavior during the typical early evening system peak hour. Most of the charging is expected to occur at the home, resulting in increased residential class sales. FMPA does not collect PEV count, PEV charging station installation count or annual energy consumption specifically for PEVs on behalf of the ARP Participants. FMPA monitors retail programs the ARP Participants may deploy in the future to support charge time management.

- 22. Please describe any Company programs or tariffs currently offered to customers relating to PEVs, and describe whether any new or additional programs or tariffs relating to PEVs will be offered to customers within the current planning period.
  - a. Of these programs or tariffs, are any designed for or do they include educating customers on electricity as a transportation fuel?
  - b. Does the Company have any programs where customers can express their interest or expectations for electric vehicle infrastructure as provided for by the Utility, and if so, please describe in detail.

The All-Requirements Project is a wholesale power supply project and as such, does not have programs or tariffs for retail customers.

- 23. Has the Company conducted or contracted any research to determine demographic and regional factors that influence the adoption of PEVs applicable to its service territory? If so, please describe in detail the methodology and findings.
  - The All-Requirements Project is a wholesale power supply project and as such, does not have a service territory. FMPA does not collect this information on behalf of the ARP Participants.
- 24. Please describe if and how the 2024 presidential election and the new administration has impacted the Company's projection of PEV growth and related demand and energy growth.
  - FMPA will monitor for changes in policies that affect PEV growth and demand. FMPA works with nFront in developing an EV forecast and will adjust the next forecast as necessary for any policy changes.
- 25. If applicable, please list and briefly describe all PEV pilot programs the Company is currently implementing and the status of each program.
  - The All-Requirements Project is a wholesale power supply project and as such, does not have any such programs.
- 26. If applicable, please describe any key findings and metrics of the Company's PEV pilot program(s) which reveal the PEV impact to the demand and energy requirements of the Company.
  - The All-Requirements Project is a wholesale power supply project and as such, does not have any such programs.

#### Demand Response

27. **[FEECA Utilities Only]** Please refer to the Excel Tables File (DR Participation). Complete the table by providing for each source of demand response annual customer participation information for 10 years prior to the current planning period. Please also provide a summary of all sources of demand response using the table.

FMPA is not a FEECA Utility.

28. **[FEECA Utilities Only]** Please refer to the Excel Tables File (DR Annual Activation). Complete the table by providing for each source of demand response annual usage information for 10 years prior to the current planning period. Please also provide a summary of all demand response using the table.

FMPA is not a FEECA Utility.

#### **Generation & Transmission**

#### **Utility-Owned Resources**

- 29. Please refer to the Excel Tables File tabs listed below. Complete the tables by providing information on the utility-owned generation resources for the time period listed. When completing the tables, please consider the following factors: (i) for multiple small (<0.25 MW) distributed resources of the same type and fuel source, provide a single entry; (ii) for solar facilities, if available, provide the nameplate DC capacity as the gross capacity, the nameplate AC capacity as the net capacity, and the firm contribution during time of system peak as the firm capacity. If a solar facility is combined with an energy storage system, identify the capacity of the energy storage system in a separate line.
  - a. Excel Tables File (Existing Utility), including each utility-owned generation resource in service as of December 31 of the year prior to the current planning period.
  - b. Excel Tables File (Planned Utility), including each utility-owned generation resource that is planned to enter service during the current planning period.

This information has been provided as requested.

30. For each planned utility-owned generation resource or group of resources, provide a narrative response discussing the current status of the project.

Orange Cogeneration is currently owned by Northern Star Generation and is operating. FMPA intends to acquire the generator and take operational control on January 1, 2026. It is an LM6000 combined cycle with a net summer capacity of 104 MW. FMPA will rename the facility to Bartow Energy Center and has utilized the new name in the 2025 TYSP.

31. Please list and discuss any planned utility-owned renewable resources that have, within the past year, been cancelled, delayed, or reduced in scope. What was the primary reason for the changes? What, if any, were the secondary reasons?

FMPA has no planned utility-owned renewable resources.

32. Discuss the impact of any recent federal actions on permitting for renewable generation. As part of your discussion, identify what projects, if any, were impacted and what those impacts were.

FMPA has no projects that were affected by any recent federal actions on permitting for renewable generation.

33. Please refer to the Excel Tables File (Planned PPSA). Complete the table by providing information on each planned generation resource that requires siting under the Power Plant Siting Act. For each planned unit, provide the date of the Commission's Determination of Need and Power Plant Siting Act certification, if applicable.

This information has been provided as requested.

34. Please refer to the Excel Tables File (Planned Construction). Complete the table by providing information on all planned generating units with an in-service date within the current planning period. For each planned unit, provide the final decision ("drop dead") date for a decision on whether or not to construct each unit, and the estimated dates for site selection, engineering, permitting, procurement, and construction.

This information has been provided as requested.

35. Please refer to the Excel Tables File (Unit Performance). Complete the table by providing information on each utility-owned generation resource in service during the current planning period. For historic performance, use the past three years for a historical average. For projected performance, use an average of the next 10-year period for projected factors.

This information has been provided as requested.

36. Please refer to the Excel Tables File (Unit Dispatch). Complete the table by providing the actual and projected capacity factors for each existing and planned unit on the Company's system for the 11-year period beginning one year prior to the current planning period.

This information has been provided as requested.

37. [Investor-Owned Utilities Only] For each existing unit on the Company's system, please provide the planned retirement date. If the Company does not have a planned retirement date for a unit, please provide an estimated lifespan for units of that type and a non-binding estimate of the retirement date for the unit.

FMPA is not an Investor-Owned Utility.

38. [Investor-Owned Utilities Only] Please refer to the Excel Tables File (Solar and Storage Sites). Complete the table by providing information on each of the Company's existing and

planned solar and/or energy storage facilities, including the Order and date of Commission approval (or Pending if not yet approved). Identify the associated cost recovery mechanism (such as in a base rate case, the environmental cost recovery clause, solar base rate adjustment, or special tariffs such as SolarTogether, SolarTogether Extension, and Clean Energy Connection) for each facility as well.

#### FMPA is not an Investor-Owned Utility.

39. In its planning process, did the Company consider constructing any solar or energy storage facilities that are co-located with other uses such as parking areas, waterways, existing buildings (including rooftops), or substations? If not, explain why not. If so, explain whether the analysis selected any facilities of this type and identify them.

FMPA is a wholesale power provider and does not have a service area. FMPA does not control any of the facilities listed for co-locating.

40. Please refer to the Excel Tables File (Unit Modifications). Complete the table by providing information on all of the Company's units that are either will or are potential candidates to change fuel types or be repower, such as conversion to a Combined Cycle unit component.

This information has been provided as requested.

41. Please refer to the Excel Tables File (Transmission Lines). Complete the table by providing a list of all proposed transmission lines for the current planning period that require certification under the Transmission Line Siting Act. Please also include in the table transmission lines that have already been approved, but are not yet in-service.

This information has been provided as requested.

#### Power Purchase and/or Sale Agreements

- 42. Please refer to the Excel Tables File tabs listed below. Complete the tables by providing information on each power purchase agreement (PPA) for the time period listed. If the PPA is associated with a particular generating unit(s), provide additional information about those units if available. When completing the tables, please consider the following factors: (i) for multiple small (<0.25 MW) distributed resources of the same type and fuel source, provide a single entry; (ii) for solar facilities, if available, provide the nameplate DC capacity as the gross capacity, the nameplate AC capacity as the net capacity, and the firm contribution during time of system peak as the firm capacity. If a solar facility is combined with an energy storage system, identify the capacity of the energy storage system in a separate line.
  - a. Excel Tables File (Existing PPA), including each PPA still in effect by December 31 of the year prior to the current planning period pursuant to which energy was delivered to the Company during said year.
  - b. Excel Tables File (Planned PPA), including each PPA pursuant to which energy will begin to be delivered to the Company during the current planning period.

This information has been provided as requested.

43. For each planned power purchase agreement, provide a narrative response discussing the current status of the associated generating project.

FMPA has no planned traditional PPAs during the study period.

44. Please list and discuss any long-term power purchase agreements that have, within the past year, been cancelled, delayed, or reduced in scope. What was the primary reason for the change? What, if any, were the secondary reasons?

Since the 2024 TYSP, the solar sites in the Solar III Project have been cancelled or are in the process of being cancelled due to a variety of market and site-specific factors. The Solar III Project has been retired.

- 45. Please refer to the Excel Tables File tabs listed below. Complete the tables by providing information on each power sale agreement (PSA) for the time period listed. If the PSA is associated with a particular generating unit(s), provide additional information about those units if available. When completing the tables, please consider the following factors: (i) for multiple small (<0.25 MW) distributed resources of the same type and fuel source, provide a single entry; (ii) for solar facilities, if available, provide the nameplate DC capacity as the gross capacity, the nameplate AC capacity as the net capacity, and the firm contribution during time of system peak as the firm capacity. If a solar facility is combined with an energy storage system, identify the capacity of the energy storage system in a separate line.
  - a. Excel Tables File (Existing PSA), including each PSA still in effect by December 31 of the year prior to the current planning period pursuant to which energy was delivered by the Company during said year.
  - b. Excel Tables File (Planned PSA), including each PSA pursuant to which energy will begin to be delivered by the Company during the current planning period.

This information has been provided as requested.

46. For each planned power sale agreement, provide a narrative response discussing the current status of the agreement.

FMPA does not have any planned power sale agreements.

47. Please list and discuss any long-term power sale agreements within the past year that were cancelled, expired, or modified. What was the primary reason for the change? What, if any, were the secondary reasons?

The partial requirements power sale to the Central Florida Tourism Oversight District was modified from a January 2025 start date to an October 2024 start date.

#### Renewable Generation

48. Please refer to the Excel Tables File (Renewables). Complete the table by providing the actual and projected annual energy output of all renewable resources on the Company's system, by source, for the 11-year period beginning one year prior to the current planning period.

This information has been provided as requested.

49. Please describe any actions the Company engages in to encourage production of renewable energy within its service territory.

The All-Requirements Project is a wholesale power supply project and as such, does not have a service territory. However, FMPA fully supports and facilitates renewable energy projects and initiatives within our member/owner territories. FMPA, (i) on behalf of the ARP, (ii) as separate FMPA power supply projects and, (iii) with distinct FMPA Member entitlements not associated with the ARP or a power supply project, has facilitated and/or entered into PPAs totaling 373 MW of solar energy expected to be online by the end of 2025. The All-Requirements Project is projected to receive 116 MW-AC of already contracted solar energy during the 2025 TYSP study horizon consistent with the amounts assumed in the 2025 TYSP.

- 50. Please identify and describe any programs the Company offers that allows its customers to contribute towards the funding of specific renewable projects, such as community solar programs.
  - a. Please describe any such programs in development with an anticipated launch date within the current planning period.

The All-Requirements Project is a wholesale power supply project and as such, does not have such programs.

#### **Energy Storage**

51. Briefly discuss any progress in the development and commercialization of non-lithium-ion based battery storage technology the Company has observed in recent years.

In past years, FMPA retained Burns & McDonnell to prepare a market characterization and presentation to the FMPA Board of Directors on storage. Burns & McDonnell summarized estimated costs and technology trends related to competing battery storage technologies, which included a matrix detailing the optimal operational parameters (or "use cases") for each type of battery technology and the level of commercialization and prior successful deployment for each option. FMPA continually monitors storage technology trends, looking for cost effective deployment opportunities as part of our ongoing resource planning efforts. FMPA's ongoing resource planning efforts continue to focus on plausible use cases for lithium-ion technologies.

52. If applicable, please describe the strategy of how the Company charges and discharges its energy storage facilities. As part of the response discuss if any recent legislation, including the IRA, has changed how the Company dispatches its energy storage facilities.

FMPA does not have any storage facilities.

53. Briefly discuss any considerations reviewed in determining the optimal positioning of energy storage technology in the Company's system (e.g., closer to/further from sources of load, generation, or transmission/distribution capabilities).

In general, consistent with our updated discovery process for additional solar facilities, FMPA anticipates storage to either be co-located with a solar facility to maximize energy value, or for storage to alleviate some alternative constraint on the system (e.g., transmission capacity constraint).

54. Please explain whether customers have expressed interest in energy storage technologies. If so, describe the type of customer (residential, commercial industrial) and how have their interests been addressed.

The All-Requirements Project is a wholesale power supply project and as such, does not have retail customers. FMPA does not collect this information on behalf of ARP Participants.

55. Please refer to the Excel Tables File (Existing Storage). Complete the table by providing information on all energy storage technologies that are currently either part of the Company's system portfolio or are part of a pilot program sponsored by the Company.

This information has been provided as requested.

56. Please refer to the Excel Tables File (Planned Storage). Complete the table by providing information on all energy storage technologies planned for in-service during the current planning period either as part of the Company's system portfolio or as part of a pilot program sponsored by the Company.

This information has been provided as requested.

- 57. Please identify and describe the objectives and methodologies of all energy storage pilot programs currently running or in development with an anticipated launch date within the current planning period. If the Company is not currently participating in or developing energy storage pilot programs, has it considered doing so? If not, please explain.
  - a. Please discuss any pilot program results, addressing all anticipated benefits, risks, and operational limitations when such energy storage technology is applied on a utility scale (> 2 MW) to provide for either firm or non-firm capacity and energy.
  - b. Please provide a brief assessment of how these benefits, risks, and operational limitations may change over the current planning period.
  - c. Please identify and describe any plans to periodically update the Commission on the status of your energy storage pilot programs.

FMPA is not currently participating in or developing energy storage pilot programs on behalf of ARP Participants. As noted above, FMPA, on a recurring basis, interfaces with technology providers and vendors to monitor cost declines in available storage technologies and will continue to evaluate the cost and performance of available storage technologies that may be operationally advantageous to the ARP.

## **Reliability**

58. Please refer to the Excel Tables File (Reliability). Complete the table by providing the loss of load probability, reserve margin, and expected unserved energy for each year of the planning period.

This information has been provided as requested.

59. Describe in detail the methodology the Utility used to determine the seasonal firm capacity contribution of its solar facilities or purchases and provide the percentage contribution for each facility, if applicable. As part of this discussion, please explain whether the Company's existing and/or future solar facilities shift the hour of system peak demand for reliability planning purposes net of solar generation.

FMPA has performed historical evaluations of hourly load shapes for the All-Requirements Project as compared to typical metrological year based solar outputs. PV performance has been simulated using both industry tools (e.g., PV Watts) as well as shapes provided to FMPA by our power purchase agreement developers. Based on this statistical analysis, we have assigned 40% of the nominal AC rating of a solar facility as being available during the summer seasonal peak period. FMPA's solar penetration has not reached the levels that have shifted the hour of peak. FMPA does not assign any PV contribution for reliability for the winter seasonal peak period.

60. [Investor Owned Utilities Only] Please refer to Excel Tables File (Firm Solar). Provide an example hourly contribution of the Company's generating units compared to the system demand for a typical seasonal peak day for each season (Summer and Winter). As part of this response, provide the typical hourly demand and contribution of non-firm renewable resources (such as solar or wind), energy storage (charging and discharging separately), nuclear, natural gas, coal, oil, firm renewables, all other generation, purchased power, power sales, and demand response, if applicable.

FMPA is not an Investor-Owned Utility.

- 61. If the Company utilizes non-firm generation sources in its system portfolio, please detail whether it currently utilizes or has considered utilizing energy storage technologies to provide firm capacity from such generation sources. If not, please explain.
  - a. Based on the Company's operational experience, please discuss to what extent energy storage technologies can be used to provide firm capacity from non-firm generation

sources. As part of your response, please discuss any operational challenges faced and potential solutions to these challenges.

At this time, FMPA does not rely on non-firm generation sources for capacity. As FMPA's solar projects become energized, FMPA will enhance our operational experience with intermittent generation, and we have assigned summer season capacity value to PV output. We continue to work with our developers to frame the value proposition for energy storage, which could provide benefits in the areas of (i) energy arbitrage, (ii) instantaneous ramp-up, (iii) instantaneous ramp-down, and (iv) various other ancillary services. Longer duration storage could also provide a mirror to peaking capacity for a constrained number of hours. Additionally, storage could be used to mitigate transmission capacity constraints during high consumption periods. All such value areas, and others, are continually monitored by FMPA staff to determine the appropriate timing for potential implementation from a cost-benefit perspective.

#### **Environmental**

- 62. Please explain if the Company assumes carbon dioxide (CO<sub>2</sub>) compliance costs in the resource planning process used to generate the resource plan presented in the Company's current planning period TYSP. If the response is affirmative, answer the following questions:
  - a. Please identify the year during the current planning period in which CO2 compliance costs are first assumed to have a non-zero value.
  - b. [Investor-Owned Utilities Only] Please explain if the exclusion of CO2 compliance costs would result in a different resource plan than that presented in the Company's current planning period TYSP.
  - c. [Investor-Owned Utilities Only] Please provide a revised resource plan assuming no CO2 compliance costs.

FMPA did not assume carbon dioxide costs in the process used to generate the resource plan presented in the current TYSP. However, FMPA has done extensive analysis of potential alternative outcomes and plans that may be required under an array of proposed carbon legislation, such as the Clean Futures Act and similar configurations, in order to proactively evaluate and prepare for a range of potential future outcomes.

63. Provide a narrative explaining the impact of any existing environmental regulations relating to air emissions and water quality or waste issues on the Company's system during the previous year. As part of your narrative, please discuss the potential for existing environmental regulations to impact unit dispatch, curtailments, or retirements during the current planning period.

During the 2024 period, FMPA has been able to manage our fleet operations and capital and O&M expenditures in a manner that avoids negative impacts such as curtailments or unplanned retirements. FMPA fully anticipates that existing environmental regulations will not have any negative impacts on unit dispatch, curtailments or retirements during the 2025 through 2034 period.

- 64. For the U.S. EPA's Standards of Performance for Greenhouse Gas Emissions for New Stationary Sources: Electric Utility Generating Units Rule:
  - a. Will your Company be materially affected by the rule?
  - b. What compliance strategy does the Company anticipate employing for the rule?
  - c. If the strategy has not been completed, what is the Company's timeline for completing the compliance strategy?
  - d. Will there be any regulatory approvals needed for implementing this compliance strategy? How will this affect the timeline?
  - e. Does the Company anticipate asking for cost recovery for any expenses related to this rule? Refer to the Excel Tables File (Emissions Cost). Complete the table by providing information on the costs for the current planning period.
  - f. If the answer to any of the above questions is not available, please explain why.

FMPA has no immediate plans to develop, modify or reconstruct any units; therefore, this rule is not currently applicable to FMPA. To the extent FMPA adjusts future plans that impact applicability, FMPA will comply with all applicable EPA standards.

- 65. Explain any expected reliability impacts resulting from each of the EPA rules listed below. As part of your explanation, please discuss the impacts of transmission constraints and changes to units not modified by the rule that may be required to maintain reliability.
  - a. Mercury and Air Toxics Standards (MATS) Rule.
  - b. Cross-State Air Pollution Rule (CSAPR).
  - c. Cooling Water Intake Structures (CWIS) Rule.
  - d. Coal Combustion Residuals (CCR) Rule.
  - e. Standards of Performance for Greenhouse Gas Emissions for New Stationary Sources: Electric Utility Generating Units.
  - f. Affordable Clean Energy Rule or its replacement.
  - g. Effluent Limitations Guidelines and Standards (ELGS) from the Steam Electric Power Generating Point Source Category.

FMPA actively participates in the FRCC Planning Committee, the Florida Coordinating Group (FCG) Environmental Committee and sub-committees and contributes to statewide reliability planning activities. The full impact of the EPA's rules on the long-range reliability of FMPA and the FRCC Region is still unknown. FMPA does not anticipate that, under current planning assumptions, ARP's wholly owned units and ARP Participants' wholly owned units for which FMPA has been assigned operational responsibility will be required to be offline due to retirements, curtailments, installation of additional emissions controls, or additional maintenance related to emissions control. Therefore, FMPA operations should not contribute to any potential transmission constraints resulting from the EPA's rules.

66. Please refer to the Excel Tables File (EPA Operational Effects). Complete the table by identifying, for each unit affected by one or more of EPA's rules, what the impact is for each rule, including: unit retirement; curtailment; installation of additional emissions controls: fuel switching: or other impacts identified by the Company.

This information has been provided as requested.

67. Please refer to the Excel Tables File (EPA Cost Effects). Complete the table by identifying, for each unit impacted by one or more of the EPA's rules, what the estimated cost is for implementing each rule over the course of the planning period.

This information has been provided as requested.

68. Please refer to the Excel Tables File (EPA Unit Availability). Complete the table by identifying, for each unit impacted by one or more of EPA's rules, when and for what duration units would be required to be offline due to retirements, curtailments, installation of additional controls, or additional maintenance related to emission controls. Include important dates relating to each rule.

This information has been provided as requested.

69. If applicable, identify any currently approved costs for environmental compliance investments made by your Company, including but not limited to renewable energy or energy efficiency measures, which would mitigate the need for future investments to comply with recently finalized or proposed EPA regulations. Briefly describe the nature of these investments and identify which rule(s) they are intended to address.

There are no currently approved capital investments being made by FMPA at its wholly owned units or units for which FMPA has operational responsibility for environmental compliance associated with recently finalized or proposed EPA regulations.

For the units in which FMPA has a minority ownership interest, including the Stanton, Indian River and St. Lucie units, FMPA defers to the responses submitted by OUC and FPL as the Majority Owners and Operators of these facilities. FMPA will be responsible for a percentage share of all capital additions and O&M costs.

## **Fuel Supply & Transportation**

70. Please refer to the Excel Tables File (Energy Rates). Complete the table by providing information on the Utility's firm capacity and energy purchases, non-firm energy purchases, and the utility's as-available energy rate. If the Company uses multiple areas for as-available energy rates, please provide a system-average rate as well.

This information has been provided as requested.

71. Please refer to the Excel Tables File (Fuel Usage & Price). Complete the table by providing, on a system-wide basis, the actual annual fuel usage (in GWh) and average fuel price (in nominal \$/MMBTU) for each fuel type utilized by the Company in the 10-year period prior to the current planning period. Also, provide the forecasted annual fuel usage (in GWh) and forecasted annual average fuel price (in nominal \$/MMBTU) for each fuel type forecasted to be used by the Company in the current planning period.

This information has been provided as requested.

72. Please discuss how the Company compares its fuel price forecasts to recognized, authoritative independent forecasts.

FMPA's fuel price forecast data is obtained from authoritative, independent consultants. These forecasts are then compared to information received from other utilities, suppliers, market exchanges, and trade literature. FMPA staff evaluates the reasonableness of the data contained in any fuel price forecast and works with its independent consultants as is deemed appropriate.

73. Please identify and discuss expected industry trends and factors for each fuel type listed below that may affect the Company during the current planning period.

- a. Coal.
- b. Natural Gas.
- c. Nuclear.
- d. Fuel Oil.
- e. Other (please specify each, if any).
- a. FMPA has a minority ownership interest in OUC's Stanton Units 1 and 2, and OUC is the sole operator for the facility. FMPA will defer to OUC's responses for this issue.
- b. Please see the responses in the following questions #76.
- c. FMPA has minority ownership interest in FPL's St. Lucie Unit 2, and FPL is the sole operator for the facility. FMPA will defer to FPL's responses for this issue.
- d. The dual fuel capable resources of the ARP are designed predominantly to use distillate fuel oil. Except for ARP generation resources in Key West, this service capability is for back-up purposes only for those instances when natural gas supply is restricted or unavailable. Consumed volumes of fuel oil are replaced at market pricing to maintain defined inventory levels based upon risk mitigation criteria. Given the limited circumstances when FMPA operates certain ARP resources on fuel oil, changing market trends have little impact upon the ARP and its operations.
- e. N/A.
- 74. Please provide a comparison of the Utility's 2024 fuel price forecast used to prepare its 2024 TYSP and its actual 2024 delivered fuel prices.
  - The 2024 TYSP fuel price forecast for natural gas, on an annual basis, was approximately 34% higher than actual delivered gas prices for calendar year 2024 (note: we interpret this inquiry as reflective of a year-to-year comparison).
- 75. Please explain any notable changes in the Utility's forecast of fuel prices used to prepare the Utility's current TYSP compared to the fuel process used to prepare the Utility's prior TYSP.
  - In the near-term forecast, in the 2025 TYSP, FMPA utilized a natural gas forecast closer to 2024 actuals. In the longer term, both forecasts converge since the same methodology and sources are used for long-term price expectations. Since FMPA's generation mix is primarily gas, we retain Energy Ventures Analysis (EVA) to provide quarterly updates to long term natural gas forecasts utilized for various planning purposes.
- 76. Please identify and discuss steps that the Company has taken to ensure natural gas supply availability and transportation over the current planning period.
  - FMPA continually explores opportunities to diversify its natural gas supply portfolio and reviews industry trends as production sources change over time. FMPA also continues to evaluate its gas transportation capacity requirements to ensure an optimal amount of firm transportation capacity is reserved to ensure reliable delivery of natural gas to its generating units as they are optimally dispatched. Currently over the planning period, FMPA has firm gas transportation contract capacity sufficient to meet its projected needs.

- 77. **[FEECA Utilities Only]** Please refer to the Excel Tables File tabs listed below. Complete the tables by providing information on the data centers for the time period listed.
  - a. Excel Tables File (Existing Data Centers), including for data centers being served as of December 31 of the year prior to the current planning period.
  - b. Excel Tables File (Planned Data Centers), including for data centers that are planned during the current planning period.

## FMPA is not a FEECA Utility.

- 78. With respect to the load forecast included in the Utility's 2025 Ten-Year Site Plan to be filed in April this year, does the load forecast include projections of annual energy consumption and demand associated with data centers within your service area during the forecasting time horizon (2025-2034)?
  - a. If any such projections have been made, please provide details of the projections including the type of data centers expected to contribute to such energy/demand, and what factors are driving such energy consumption and demand.
  - b. If no specific projections have been made, what does the Utility believe is the likely pattern of load growth associated with this industry within its service territory?

FMPA is a wholesale power provider and does not have a service area. With respect to large discrete load additions, FMPA's load forecasting process annually and recurringly engages with the ARP Participants to understand the likelihood of such load growth potential within the All-Requirements Project. As of the 2025 TYSP, there are no such firm data center loads included in our base case.

79. Please identify the Utility's issues and/or concerns, if any, that are expected to result from the growth in data centers in your utility's service territory. Please also specify how has, and how does, your utility anticipate responding to such issues or concerns.

FMPA is a wholesale power provider and does not have a service area.

80. **[FEECA Utilities Only]** Please identify and discuss the Company's role in the research and development of utility power technologies, including, but not limited to, research programs that are funded through the Energy Conservation Cost Recovery Clause. As part of this response, please describe any plans to implement the results of research and development into the Company's system portfolio, and the timing of such implementation. In addition, discuss how any anticipated benefits will affect your customers.

#### FMPA is not a FEECA Utility.

81. Has the Utility employed, or considered using, any type of the artificial intelligence and/or other new technologies/tools in its load forecasting, operation, customer service, and cybersecurity management? Please explain your response.

FMPA is experimenting with AI for researching industry information and starting to learn what other AI services are available. FMPA has not made any investment or commitment for AI usage for operations or cybersecurity. FMPA is a wholesale power provider and does not have a customer service department. FMPA utilizes a consulting service for load forecasting and cannot comment on its usage of AI or other technology.

82. Please identify and discuss emerging power generation and consumption technologies your Company is considering. As part of this response, please describe any formal steps the Company has or will take for possible implementation of the technology.

FMPA is not currently pursuing any emerging power generation or consumption technologies. As part of FMPA's integrated resource planning process, FMPA will utilize consulting companies to provide information on available technologies, and FMPA evaluates if these technologies are a fit to any of the company's current or future needs.

Notes	12	1,210	0	1,210	25	10	38

<sup>1.</sup> System-Average Temperature is the temperature at the Orlando International Airport at the time of the ARP coincident peak.

<sup>2.</sup> Actual Peak Demand is at the Generation level and includes wholesale obligations to parties other than ARP Participants, if applicable, and transmission losses. □

TYSP Year 2025 Question No. 18

Year	Number	Number of Public PEV	Number of Public DCFC PEV		nulative Impact of P	
	of PEVs	Charging	Charging	Summer Demand	Winter Demand	Annual Energy
		Stations	Stations	(MW)	(MW)	(GWh)

- [1] Historical operating data for this unit is available from Florida Power and Light.
- [2] Historical operating data for this unit is available from Orlando Utilities Commission.
- [3] Historical operating data for this unit is available from NextEra Energy Resources.
- [4] FMPA has a PPA with NextEra Energy Resources for Oleander Unit 5. Historical operating data for the unit is available from NextEra Energy Resources.
- [5] Projected capacity factors are based on production modeling using assumptions suitable for long-term planning purposes.
- [6] FMPA has a PPA with NextEra Energy Resources for Oleander Unit 1. Historical operating data for the unit will be available from NextEra Energy Resources. PPA dates from 1/1/2024 to 12/31/2029.
- [7] Historical operating data for current ARP solar resources is available from Florida Renewable Partners. ARP Solar represents estimated solar performance for all solar resources within the All Requirements Project portfolio over the study period.
- [8] Sand Lake Energy Center (previously Orlando Cogen) was acquired in February of 2024. Mulberry was acquired in August of 2024. Historical operating data shown is for partial year of FMPA ownership. Prior historical operation data for this unit is available from Northern Star Generation.
- [9] FMPA, on behalf of the All-Requirements Project, is expected to close on Orange in early 2026. Historical operating data for this unit is available from Northern Star Generation.

Origis Energy	2/13/2020	48.125	0	10/1/2024	9/1/2045	Rice Creek	NA	Putnam	PV	SUN	10	2024	96.8[4]	96.8[4]	74.9[4]	74.9[4]	19.25[4]	0

- [1] This PPA is for firm capacity and energy set at 106 MW from 1/1/2024 through 12/31/2027 and 155 MW from 1/1/2028 through 12/31/2029.
- [2] US Sugar has 3 generators. The first generator was installed in September 2004 (14 MW), the second, in November 2006 (20 MW) and the third in 2007 (14 MW) for a total of 48 MW on-site generation. The facility uses 45MW in-house which leaves 3MW available for the market on-peak. There is a 20 MW transformer at the site which limits the total amount of generation available to sell to the grid to a maximum of 20 MW at any time. This biomass facility is a non-firm resource and energy is received on an "As Available" basis. The contract is on-going but may be terminated with a 90 day cancellation notice.
- [3] FMPA purchases a 40.5 MW-AC share from one solar facility. FMPA only includes 40% of its capacity entitlement as firm capacity in the summer only, 16.2 MW-AC. FMPA receives its pro-rata amount of energy based on the actual output of the facility, and has assigned an estimated amount of firm capacity associated with this PPA as contributing to meeting summer peak for reliability purposes (a percentage of the firm capacity shown in the table). Gross unit capacity represents MW-DC and Net unit capacity represents MW-AC capcity.
- [4] FMPA purchases a 48.125 MW-AC share from one solar facility. FMPA only includes 40% of its capacity entitlement as firm capacity in the summer only, 19.25 MW-AC. FMPA receives its pro-rata amount of energy based on the actual output of the facility, and has assigned an estimated amount of firm capacity associated with this PPA as contributing to meeting summer peak for reliability purposes (a percentage of the firm capacity shown in the table). Gross unit capacity represents MW-DC and Net unit capacity represents MW-AC capcity.

<sup>[1]</sup> Utility - Non-Firm renewable source is two parts: 1) FMPA's share of generation from landfill gas that is combusted in the Stanton Units 1 and 2; and 2) Energy from FMPA's share of the PV system on the roof of the NOAA Eco-Discovery Center.

<sup>[2]</sup> Purchase - Non-Firm source is generation from bagasse combusted by US Sugar and sold to FMPA plus the projected energy purchased under the current and future solar PPAs entered into by the All Requirements Project.

<sup>[1]</sup> Estimate represents simulated expected unserved energy across the FMPP without consideration of interties and other reserve sharing arrangements. Any unserved energy situation forecasted to occur during the summer period within our simulations could be eliminated by importing power from outside the FMPP.

Note: Reserve margin projections can be obtained from Schedules 7.1 and 7.2 of FMPA's 2025 Ten-Year Site Plan.

TYSP Year 2025 Question No. 60

FMPA is not an Investor-Owned Utility.

Notes															

<sup>[1]</sup> The units listed in this table include only the generation units that FMPA, as agent for FMPA's All-Requirements Power Supply Project (ARP) directly owns, in whole or in part through ownership shares and entitlements, as well as those generation units for which FMPA does not own but has been assigned operational (including environmental) responsibility from individual Participants. FMPA's answers to all of the questions in this Environmental Issues Section of this Ten Year Site Plan Supplemental Data Request #1 are based on this list of units. However, FMPA's responses to other sections of this Supplemental Data Request may be based upon the larger set of resources used by FMPA to serve the ARP, which includes purchased power resources, and resources owned and operated by individual ARP Participants that have been contractually dedicated to serve the combined ARP load.

<sup>[2]</sup> The State of Florida has been excluded from the CSAPR Update since 2015. If future CSAPR modeling demonstrates that Florida is impacting downwind states, these units will continue to operate within prescribed limits of permits and CSAPR allowances, as assigned and purchased. EPA removed Florida's former CAIR rule—Rule 62–296.470, Implementation of Federal Clean Air Interstate Rule—from the SIP on October 3, 2023.

<sup>[3]</sup> FMPA has a minority ownership in Stanton Units 1 and 2, which are affected by the MATS and CCR Rules. The ACE Rule has been vacated by the D.C. Circuit Court. Other FMPA units are not impacted by these rules. FMPA will defer to OUC's compliance strategy for these units, and FMPA will be responsible for a percentage share of the costs for compliance.

<sup>[4]</sup> FMPA has a minority ownership in St. Lucie 2, which will be affected by the ELGS and CWIS rules. Other FMPA units are not impacted by these rules. FPL has all compliance responsibility and FMPA will be responsible for a percentage share of all capital additions and O&M costs.

St. Lucie 2 (Minority) [4]	2	St. Lucie	NP	UR	8	1983	48	50	[3]				[3]		
Notes															

<sup>[1]</sup> The state of Florida is excluded from the CSAPR Update. If future CSAPR modeling demonstrates that Florida is impacting downwind states, these units will continue to operate within prescribed limits of permits and CSAPR allowances, as assigned and purchased; if allowances continue to be readily available, FMPA does not anticipate any substantial increase in costs due to CSAPR for our wholly owned and/or assigned generating units.

<sup>[2]</sup> FMPA has a minority ownership in Stanton Units 1 and 2, which will be affected by the MATS and the CCR Rules. The ACE Rule has been vacated by the D.C. Circuit Court. FMPA will be responsible for a percentage share of all required capital additions and additional O&M costs.

<sup>[3]</sup> FMPA has a minority ownership in St. Lucie 2, which will be affected by the ELGS and CWIS rules. Other FMPA units are not impacted by these rules. FPL has all compliance responsibility and FMPA will be responsible for a percentage share of all capital additions and O&M costs.

TYSP Year 2025 Question No. 68

					Commonois	ıl In-Service	Unit C	apacity		Estimated 1	EPA Ru	le Impact	s: Unit	Availability	Y

No	tes														

FMPA does not anticipate any units being offline due to retirements, curtailments, installation of additional controls, or additional maintenance related to emission controls. FMPA defers to the responses of OUC for the Stanton 1 and 2 units and FPL for the St. Lucie 2 unit.

- [2] Historical Uranium pricing is available from FPL and Duke Energy Florida.
- [3] Historical coal pricing is available from OUC.
- [4] Historical Distillate Oil values (\$/MMBtu) reflect the value of inventory as it was taken from the fuel oil tanks.
- [5] Projected fuel values (\$/MMBtu) represent FMPA's projection of delivered fuel prices.

<sup>[1]</sup> Historical natural gas values are the annual average of daily spot market prices for Gas Daily FGT Zone 3. Transportation and other charges would be in addition to these spot prices.

TYSP Year 2025 Question No. 77(a)

### FMPA is not a FEECA Utility.
