(a) 	ERC is determined based on one of the following methods: If actual flow data are available from the proceding 12 months: Divide the total annual single family residence (SFR) gallons sold by the esidents (SFR) gallons sold by the average number of single family reperiod and divide the result by 365 days. If no historical flow data are available use:	
(0)	ERC = (Total SFR gallons sold (omit 000/365 days/280 gallons per d	av).
