COMPANY PROFILE

Provide a brief narrative company profile which covers the following areas:

- A. Brief company history.
- B. Public services rendered.
- C. Major goals and objectives.
- D. Major operating divisions and functions.
- E. Current and projected growth patterns.
- F. Major transactions having a material effect on operations.
- A. History: Lighthouse Utilities Company purchased the Cape San Blas Water Company in 1984, and was organized and registered with the Florida Secretary of State effective July 1, 1984. In 1986, a new well, pumping plant and distribution system was constructed on the Cape San Blas area of South Gulf County. We became regulated by the Florida Public Service Commission (FPSC) in the fall of 1986. The Commission granted us an extension of area in 1993. We now have 85% of the area certified to us by the FPSC.
- B. Services: Lighthouse Utilities provides water only services in the area certified by the FPSC.
- C. Major goals & objectives:
 - (1) To continue to provide high quality potable water to our customers
 - (2) To serve all new customers as the area continues to develop
 - (3) To expand our services to areas designated by the FPSC as it becomes economically feasible to do so.
 - (4) To provide a fair return on investment to stockholders of the company
- D. Division & functions: This small rural water company has a general manager, operating manager and billing clerk. There are no divisions, and all functions are the responsibility of the general manager.
- E. The company extended the distribution system in 1997, and gained customers in established areas. Due to major development in our service area, a large water tank and booster facility was added to our system in 2001.
- F. Major transactions: The 10 inch water line connecting the Lighthouse Utilities system to the City of Port Saint Joe water system was completed in early 2007. This provides access to the City of Port Saint Joe water system for emergency use and/or additional capacity.
- G. Most of the service area has been built out, and any additional customers will be fill-in customers on th existing lines. The company believes it has sufficient pumping and storage capacity to stay ahead of demand until the fresh water canal can be used.

CALCULATION OF THE WATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one water equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use: ERC = (Total SFR gallons sold (Omit 000) / 365 days / 350 gallons per day)

ERC Calculation:					
P 11 11	95,818 SFR gallons (from W-11)				
divided by	1,425 Water System Meter Equivale	25 Water System Meter Equivalents (from W-13)			
divided by	365 equals	184 gallons per day per equivalent meter

2. Maximum number of ERCs * which can be served.	5,400 (We	lls pumping 24 hours per day		
3. Present system connection capacity (in ERCs *) usi	Unknown			
4. Future connection capacity (in ERCs *) upon service	e area buildout.	Unknown		
5. Estimated annual increase in ERCs *.		145		
6. Is the utility required to have fire flow capacity? If so, how much capacity is required?	No			
7. Attach a description of the fire fighting facilities.				
8. Describe any plans and estimated completion dates Completed connection with the City of Port		•		
 9. When did the company last file a capacity analysis r 10. If the present system does not meet the requirement a. Attach a description of the plant upgrade b. Have these plans been approved by DEP's c. When will construction begin? d. Attach plans for funding the required upgenerate. Is this system under any Consent Order we 	ts of DEP rules: necessary to meet the grading. grading.	January, 2006 DEP rules.

12. Water Management District Consumptive Use Perm	nit #	19830085		
a. Is the system in compliance with the requirements of the CUP? Yes				
b. If not, what are the utility's plans to gain of	compliance?			

* An ERC is determined based on the calculation on the bottom of Page W-13.
