EXECUTIVE SUMMARY

CERTIFICATION OF ANNUAL REPORT

I HEREBY CERTIFY, to the best of my knowledge and belief:

X	NO	1.	The utility is in substantial compliance with the Uniform System of Accounts prescribed by the Florida Public Service Commission.
YES X	NO	2.	The utility is in substantial compliance with all applicable rules and orders of the Florida Public Service Commission.
YES X	NO	3.	There have been no communications from regulatory agencies concerning noncompliance with, or deficiencies in, financial reporting practices that could have a material effect on the the financial statement of the utility.
YES X	NO	1. X	The annual report fairly represents the financial condition and results of operations of the respondent for the period presented and other information and statements presented in the the report as to the business affairs of the respondent are true, correct and complete for the period for which it represents. Items Certified 2. 3. 4. X X X (Signature of Chief Executive Officer of the utility) *
		1.	2. 3. 4. (Signature of Chief Executive Officer of the utility) *

- Each of the four items must be certified YES or NO. Each item need not be certified by both officers. The items being certified by the officer should be indicated in the appropriate area to the left of the signature.
- NOTICE: Section 837.06, Florida Statutes, provides that any person who knowingly makes a false statement in writing with the intent to mislead a public servant in the performance of his duty shall be guilty of a misdemeanor of the second degree.

December 31, 2023

COMPANY PROFILE

Provide a brief narrative company profile which covers the following areas:

- A. Brief company history.
- B. Public services rendered.
- C. Major goals and objectives.
- D. Major operating divisions and functions.
- E. Current and projected growth patterns.
- F. Major transactions having a material effect on operations.

North Florida Community Water Systems, Inc. was incorporated on January 1, 2023 for the purpose of merging six (6) separate Florida corporations into one. These merged corporations were:

Duval Waterworks, Gator Waterworks, Lake Talquin Waterworks, Seminole Waterworks, Okaloosa Waterworks, and Sunny Hills Utility.

The merger and name change was approved by the Commission in Order No. PSC-2023-0097-FOF-WS, issued February 22, 2023.

This combined company provides potable water and wastewater service in Alachua, Duval, Leon, Franklin and Okaloosa counties.

Major goal is to provide reliable water and wastewater service to its customers at reasonable rates.

SGI Wastewater Services was merged into NFCWS as of January 1, 2023.

SGI wastewater provides wastewater service on St. George Island in Franklin county.

PARENT / AFFILIATE ORGANIZATION CHART

WATER LISTING OF SYSTEM GROUPS

List below the name of each reporting system and its certificate number. Those systems which have been consolidated under the same tariff should be assigned a group number. Each individual system which has not been consolidated should be assigned its own group number.

The water financial schedules (W-2 through W-10) should be filed for the group in total.

The water engineering schedules (W-11 through W-14) must be filed for each system in the group.

All of the following water pages (W-2 through W-14) should be completed for each group and arranged by group number.

SYSTEM NAME / COUNTY	CERTIFICATE NUMBER	GROUP NUMBER
Duval water system / Duval	641-W

CALCULATION OF THE WATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one water equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use: ERC = (Total SFR gallons sold (Omit 000) / 365 days / 350 gallons per day)

ERC Calculation:

12"	Turbine	215.0		

CALCULATION OF THE WATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one water equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use: ERC = (Total SFR gallons sold (Omit 000) / 365 days / 350 gallons per day)

ERC Calculation:	

W-13 GROUP _____ SYSTEM

SYSTEM NAME / COUNTY:

Sunny Hills Water System / Washington

OTHER WATER SYSTEM INFORMATION

Furnish information below for each system. A separate page should	be supplied where necessary.								
Present ERCs * the system can efficiently serve	758								
2. Maximum number of ERCs * which can be served.	850								
3. Present system connection capacity (in ERCs *) using existing lines.	758								
4. Future connection capacity (in ERCs *) upon service area buildout.	850								
5. Estimated annual increase in ERCs *.	26								
6. Is the utility required to have fire flow capacity? If so, how much capacity is required?	Yes 700 GPM								
7. Attach a description of the fire fighting facilities.									
8. Describe any plans and estimated completion dates for any enlargements or impro-	vements of this system:								
9. When did the company last file a capacity analysis report with the DEP?	N/A								
10. If the present system does not meet the requirements of DEP rules:									
a. Attach a description of the plant upgrade necessary to meet the DE	EP rules.								
b. Have these plans been approved by DEP?	N/A								
c. When will construction begin?	N/A								
d. Attach plans for funding the required upgrading.									
e. Is this system under any Consent Order with DEP?	No								
11. Department of Environmental Protection ID # 167-0647									
12. Water Management District Consumptive Use Permit #	19842730								
a. Is the system in compliance with the requirements of the CUP?	Yes								
b. If not, what are the utility's plans to gain compliance?	N/A

^{*} An ERC is determined based on the calculation on the bottom of Page W-13.

WASTEWATER OPERATION SECTION

December 31, 2023

WASTEWATER LISTING OF SYSTEM GROUPS

List below the name of each reporting system and its certificate number. Those systems which have been consolidated under the same tariff should be assigned a group number. Each individual system which has not been consolidated should be assigned its own group number.

The wastewater financial schedules (S-2 through S-10) should be filed for the group in total.

The wastewater engineering schedules (S-11 through S-13) must be filed for each system in the group.

All of the following wastewater pages (S-2 through S-13) should be completed for each group and arranged by group number.

10"	Turbine	145.0		0
12"	Turbine	215.0		0
	Total Wastewater System Meter Equivalent	is		129_

CALCULATION OF THE WASTEWATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one wastewater equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use:

ERC = (Total SFR gallons treated (Omit 000) / 365 days / 280 gallons per day)

For wastewater only utilities:

Subtract all general use and other non residential customer gallons from the total gallons treated.

Divide the remainder (SFR customers) by 365 days to reveal single family residence customer gallons per day.

NOTE: Total gallons treated includes both treated and purchased treatment.

ERC Calculation:

OTHER WASTEWATER SYSTEM INFORMATION

Furnish information below for each system. A separate page sh	hould be supplied where necessary.
1 Present number of ERCs* now being served	182
2. Maximum number of ERCs* which can be served	Unknown
3. Present system connection capacity (in ERCs*) using existing lines	182
4. Future connection capacity (in ERCs*) upon service area buildout	Unknown
5. Estimated annual increase in ERCs*	Negative - Mall was sold
6. Describe any plans and estimated completion dates for any enlargements or im	nprovements of this system
7. If the utility uses reuse as a means of effluent disposal, attach a list of the reuse provided to each, if known.	e end users and the amount of reuse
8. If the utility does not engage in reuse, has a reuse feasibility study been comple	eted? No
If so, when?	N/A
9. Has the utility been required by the DEP or water management district to impl	lement reuse? No
If so, what are the utility's plans to comply with this requiremen	nt? N/A
10. When did the company last file a capacity analysis report with the DEP?	
If the present system does not meet the requirements of DEP rules: a. Attach a description of the plant upgrade necessary to meet the plant upgrade necessary the plant upgrade necessary to meet the plant upgrade necessary to meet the plant upgrade necessary the plant u	the DEP rules.
b. Have these plans been approved by DEP?	N/A
c. When will construction begin?	N/A
d. Attach plans for funding the required upgrading.	
e. Is this system under any Consent Order with DEP?	No
12. Department of Environmental Protection ID #	N/A

CALCULATION OF THE WASTEWATER SYSTEM **EQUIVALENT RESIDENTIAL CONNECTIONS**

Provide a calculation used to determine the value of one wastewater equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use:

ERC = (Total SFR gallons treated (Omit 000) / 365 days / 280 gallons per day)

For wastewater only utilities:

Subtract all general use and other non residential customer gallons from the total gallons treated. Divide the remainder (SFR customers) by 365 days to reveal single family residence customer gallons per day.

NOTE: Total gallons treated includes both treated and purchased treatment.

OTHER WASTEWATER SYSTEM INFORMATION

Furnish information below for each system. A separate page sh	nould be supplied where necessary.
Present number of ERCs* now being served	136
2. Maximum number of ERCs* which can be served	Unknown
3. Present system connection capacity (in ERCs*) using existing lines	136
4. Future connection capacity (in ERCs*) upon service area buildout	136
5. Estimated annual increase in ERCs*	1
6. Describe any plans and estimated completion dates for any enlargements or im New generator - Summer 2024	provements of this system
Repair Diffusers and treatment plant	
Repair Spray Fields	
7. If the utility uses reuse as a means of effluent disposal, attach a list of the reuse provided to each, if known.	e end users and the amount of reuse
8. If the utility does not engage in reuse, has a reuse feasibility study been complete	eted? No
If so, when?	N/A
9. Has the utility been required by the DEP or water management district to imple	ement reuse? No
If so, what are the utility's plans to comply with this requirement	t? N/A
2	
10. When did the company last file a capacity analysis report with the DEP?	:
11. If the present system does not meet the requirements of DEP rules:	
a. Attach a description of the plant upgrade necessary to meet the	he DEP rules.
b. Have these plans been approved by DEP?	N/A
c. When will construction begin?	N/A
d. Attach plans for funding the required upgrading.	-
e. Is this system under any Consent Order with DEP?	No
12. Department of Environmental Protection ID #	FLA010073

CALCULATION OF THE WATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one water equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use: ERC = (Total SFR gallons sold (Omit 000) / 365 days / 350 gallons per day)

ERC Calculation:		
	2

OTHER WATER SYSTEM INFORMATION

Furnish information below for each system. A se	parate page should b	e supplied where necessary.
1. Present ERCs * the system can efficiently serve.	385	
2. Maximum number of ERCs * which can be served.	385	
3. Present system connection capacity (in ERCs *) using existing	lines.	385
4. Future connection capacity (in ERCs *) upon service area build	dout.	385
5. Estimated annual increase in ERCs *.		Negative - loss of customers
6. Is the utility required to have fire flow capacity? If so, how much capacity is required?	Yes 1,500 GPM	
7. Attach a description of the fire fighting facilities.	Separate Fire Sys	stem
8. Describe any plans and estimated completion dates for any enlandates for any enlandate	argements or improv	ements of this system:
9. When did the company last file a capacity analysis report with10. If the present system does not meet the requirements of DEP of a. Attach a description of the plant upgrade neces	rules:	N/A Prules.
b. Have these plans been approved by DEP?		
c. When will construction begin?		
d. Attach plans for funding the required upgradin	g.	
e. Is this system under any Consent Order with D	EP?	
11. Department of Environmental Protection ID #	N/A	
12. Water Management District Consumptive Use Permit #	N/A	;
a. Is the system in compliance with the requireme	ents of the CUP?	N/A
b. If not, what are the utility's plans to gain comp	liance?	

^{*} An ERC is determined based on the calculation on the bottom of Page W-13.

CALCULATION OF THE WATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one water equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use: ERC = (Total SFR gallons sold (Omit 000) / 365 days / 350 gallons per day)

ERC Calculation:

OTHER WATER SYSTEM INFORMATION

Furnish information below for each system. A	separate page should	be supplied where necessary.
1. Present ERCs * the system can efficiently serve.	35	0
2. Maximum number of ERCs * which can be served.	350	
3. Present system connection capacity (in ERCs *) using existing	ng lines.	328
4. Future connection capacity (in ERCs *) upon service area but	ıildout.	350
5. Estimated annual increase in ERCs *.		1
6. Is the utility required to have fire flow capacity? If so, how much capacity is required?	Yes 500 GPM	
7. Attach a description of the fire fighting facilities.		
Describe any plans and estimated completion dates for any e N/A	nlargements or impro	vements of this system:
9. When did the company last file a capacity analysis report wi 10. If the present system does not meet the requirements of DE		N/A
a. Attach a description of the plant upgrade nec	essary to meet the DE	P rules.
b. Have these plans been approved by DEP?	N======	
c. When will construction begin?		
d. Attach plans for funding the required upgrace	ling.	
e. Is this system under any Consent Order with	DEP?	
11. Department of Environmental Protection ID #	201061	2
12. Water Management District Consumptive Use Permit #	11343-6	
a. Is the system in compliance with the require	ments of the CUP?	N/A
b. If not, what are the utility's plans to gain con	npliance?	

^{*} An ERC is determined based on the calculation on the bottom of Page W-13.

CALCULATION OF THE WATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one water equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use:

 ERC = (Total SFR gallons sold (Omit 000) / 365 days / 350 gallons per day)

ERC Calculation:

4. Future connection capacity (in ERCs *) upon service area build	dout.	2	50
5. Estimated annual increase in ERCs *.			1
6. Is the utility required to have fire flow capacity? If so, how much capacity is required?	No		
7. Attach a description of the fire fighting facilities.			
8. Describe any plans and estimated completion dates for any enland N/A	argements or improv	vements of this syste	em:
9. When did the company last file a capacity analysis report with	the DEP?	N/A	
10. If the present system does not meet the requirements of DEP	rules:		
a. Attach a description of the plant upgrade neces	sary to meet the DE	P rules.	
b. Have these plans been approved by DEP?	(
c. When will construction begin?			
d. Attach plans for funding the required upgradin	g.		
e. Is this system under any Consent Order with D	EP?	:	
11. Department of Environmental Protection ID #	#137-0077	#137-0403	#37-57-00001
12. Water Management District Consumptive Use Permit #	N/A		
a. Is the system in compliance with the requirement	ents of the CUP?	N/A	
b. If not, what are the utility's plans to gain comp	liance?	-	

^{*} An ERC is determined based on the calculation on the bottom of Page W-13.

CALCULATION OF THE WATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one water equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use:

 ERC = (Total SFR gallons sold (Omit 000) / 365 days / 350 gallons per day)

ERC Calculation:

OTHER WATER SYSTEM INFORMATION

Furnish information below for each system. As	separate page should	be supplied where necessary.									
Present ERCs * the system can efficiently serve.	72	0									
2. Maximum number of ERCs * which can be served.	720										
3. Present system connection capacity (in ERCs *) using existing	236										
4. Future connection capacity (in ERCs *) upon service area bu	720										
5. Estimated annual increase in ERCs *.	5. Estimated annual increase in ERCs *.										
6. Is the utility required to have fire flow capacity? If so, how much capacity is required?	Yes 500 gpm										
7. Attach a description of the fire fighting facilities.											
Describe any plans and estimated completion dates for any en N/A	largements or impro	evements of this system:									

9. When did the company last file a capacity analysis report wit	h the DEP?	N/A									
10. If the present system does not meet the requirements of DEI	rules:										
a. Attach a description of the plant upgrade neces	essary to meet the DI	EP rules.									
b. Have these plans been approved by DEP?	;										
c. When will construction begin?											
d. Attach plans for funding the required upgradi	ng.										
e. Is this system under any Consent Order with	DEP?										
11. Department of Environmental Protection ID #	146-4068	·									
12. Water Management District Consumptive Use Permit #	7062-2	a									
a. Is the system in compliance with the requiren	nents of the CUP?	Yes									
b. If not, what are the utility's plans to gain com	pliance?										

^{*} An ERC is determined based on the calculation on the bottom of Page W-13.
