Executive Summary – FPL's February 28, 2025, Filing

Florida Power & Light Company ("FPL" or the "Company") herein submits its Annual Reliability Report for the preceding calendar year (2024) pursuant to Rule 25-6.0455, F.A.C. In 2024, FPL once again achieved excellent results in its Transmission and Distribution ("T&D") System performance based on multiple reliability indices.

Effective January 1, 2022, the rates and tariffs of the former Gulf Power Company ("Gulf") and FPL were consolidated and unified, all former Gulf customers became FPL customers, and Gulf ceased to exist as a separate regulated entity.[1] Thus, all data provided in this report for calendar year 2022 through 2024 is for the consolidated FPL system with the former Gulf service area integrated into FPL as the Northwest Region. For any data included in this report for calendar years prior to 2022, FPL has provided standalone data for both former FPL and former Gulf.

This report provides all the data and information required by Rule 25-6.0455, F.A.C. Included are multiple Appendices that provide detailed and supporting reliability data for calendar year 2024. In addition, FPL has included Appendix F that provides graphs for key reliability indicators in a similar format utilized in the Public Service Commission's annual reliability report to the Florida Governor and State Legislature.

[1] Unless the context dictates otherwise, all references to Gulf throughout this report are for pre-consolidated Gulf.

Summary - Reliability

Total FPL System (Distribution and Transmission) – System Average Interruption Duration Index ("SAIDI") is the most relevant and best overall reliability indicator because it encompasses two other standard industry performance metrics for reliability: System Average Interruption Frequency Index ("SAIFI") and Customer Average Interruption Duration Index ("CAIDI"). In 2024, FPL continued to provide excellent overall reliability for its customers, achieving a total T&D system adjusted SAIDI of 43.8 minutes, a T&D system adjusted Momentary Average Interruption Frequency Index events ("MAIFIe") of 2.7 momentary events, and a T&D system adjusted SAIFI of 0.65 minutes.

Distribution — FPL's 2024 overall adjusted distribution reliability results were: SAIDI of 42.4 minutes; a SAIFI of 0.55 interruptions per customer; a CAIDI of 76.5 minutes; and an adjusted MAIFIe of 2.0 momentary events.

Transmission — In 2024, FPL's Transmission/Substation adjusted reliability results were: a SAIDI of 1.4 minutes; a SAIFI of 0.10 interruptions per customer; and a MAIFIe of 0.7 momentary events.

Distribution Reliability

GENERAL

1. Discuss overall performance absent adjustments (Form 102).

FPL's overall unadjusted distribution reliability in 2024, as measured by SAIDI, was 705.5 minutes. This unadjusted performance includes approximately 663.1 minutes associated with allowed exclusions (*e.g.*, tornados, named storms/hurricanes, and planned interruptions).

2. Describe the level of detailed reliability data the Company tracks.

FPL tracks the following reliability data associated with each individual interruption: customers affected, minutes interrupted, cause of outage, percentage of customers partially restored, device affected by interruption, and location of the device. All interruption data is compiled to calculate reliability indices, which are tracked throughout the year. The reliability indices that FPL tracks include the following: SAIDI, SAIFI, CAIDI, MAIFI, MAIFIe, L-Bar, CEMI-3, CEMI-5, CEMI-8, CEMM-15, CEMM-25, and Customer Momentary Experience ("CME").

3. Describe Company efforts to increase critical review of detailed reliability data.

The Company generates and reviews daily reports that provide detailed reliability information, such as the previous day's interruptions by device, month-to-date reliability indices, and year-to-date reliability indices. FPL's management utilizes the information in conducting daily in-depth reviews of key reliability data to identify lessons learned and areas for improvement. This review also includes an assessment

of upcoming weather and potential impacts, operational risks, and a final review of the daily operations plan. FPL's management team also conducts monthly reliability reviews of the programs, objectives, and actual performance vs. the plan. On an annual basis, FPL reviews its reliability performance and outage causes to implement lessons learned and further improve its reliability programs. FPL routinely uses a variety of tools to perform statistical and graphical analyses to identify reliability trends, root causes, and measure program benefits.

4. **Describe the process used by your Company to identify and select the level of detailed reliability data.**

FPL's reliability data detail has been developed over the years based on industry practices, internal needs, and external requirements (*e.g.*, requirements of regulators).

5. **Discuss adjustments**.

Generation Events – None.
Transmission Events - See Appendix G.
Distribution Events - See response to Distribution Reliability Item Nos. 11 & 13.
Extreme Weather - See response to Distribution Reliability Item Nos. 7 & 10.

6. **Discuss adjusted performance.**

** Utilizing the Saffir-Simpson Hurricane Wind Scale from the National Hurricane Center for a tropical cyclone, the strength/wind speeds have been broken into the following categories:

- Tropical Depression ("TD") with sustained wind speed of 38 mph or less;
- Tropical Storm ("TS") with sustained wind speed of 39-73 mph;
- Hurricane ("H") with sustained wind speed of 74-110 mph; and
- Major Hurricane ("M") with sustained wind speed of 111-157 mph or higher.

8. Describe the Company's efforts to avoid or minimize, in terms of costs incurred and outage duration, any similar events in the future.

FPL maintains a philosophy of continuous improvement. As a part of that philosophy, we gather information and lessons learned from each extreme weather event, maintain awareness of challenges that may be on the horizon, and seek opportunities to leverage relationships and technology to continue to minimize the cost and duration of restoration events that may affect the Company's system. Some examples of this include:

- Continued the use of drones and our new fixed-winged drone to assist with patrols and infrastructure assessments immediately after the weather has cleared.
- Analyzing our processes and system performance during and after events to identify opportunities to enhance our response and further strengthen the grid to withstand severe weather impacts.
- Continued technology improvements including implementing a new application to streamline resource management and communications during an event.
- Coordinating with strategic partners to ensure resources are available to respond immediately after the weather has cleared to minimize restoration times.
- Annual review of contracts and rates to ensure the most cost-effective resources are available prior to storm season.
- Implementing FPL's Storm Protection Plan ("SPP") as a systematic approach to achieve the legislative objectives of Section 366.96, F.S., to protect and strengthen T&D infrastructure from extreme weather conditions, reduce outage times and restoration costs, and improve overall service reliability to customers.

9. If the method of deriving the weather exclusion is different from the method used for 2023, please explain the changes and provide the Customer Minutes Interrupted (CMI) and Customers Interruptions (CI) for 2024 using the prior method.

No changes were made to FPL's exclusion methodology.

10. Provide the 2024 service reliability data for each extreme weather outage event that is excluded from your Company's 2024 Annual Distribution Reliability Report pursuant to Rule 25-6.0455.

The following data is provided in Appendix G:

A) Causation

B) Date

C) CI

D) CMI

E) L-Bar

OTHER DISTRIBUTION ADJUSTMENTS

11. Discuss the causation of each type of distribution event that resulted in customer outages.

Causation	# of Outages	CI	CMI	LBAR

12. Describe the Company's efforts to avoid or minimize any similar events in the future in terms of the level of costs incurred and outage duration.

FPL continually evaluates the need for planned crew and customer-requested outages by determining if there are alternative work methods that could minimize or prevent such an outage. If an outage is not preventable, FPL works with customers to schedule necessary outages during times that are more convenient for them (e.g., nights and weekends).

13. Provide the 2024 service reliability data for each distribution outage event that is excluded from your Company's 2024 Annual Distribution Reliability Report pursuant to Rule 25-6.0455.

***For comparison with former FPL, the former Gulf cause "Other" has been placed into its own category and removed from "All Other Causes". The combined total of the former Gulf causes "Other" and "All Other Causes" is equal to the original values of "All Other Causes" previously reported for the former Gulf metrics.*

See remediation programs/budget levels in FPL's response to Distribution Reliability Item No. 16. Costs incurred to restore service by cause are not specifically tracked.

15. The process used to identify and select the actions to improve the performance in each of the top causes of outages.

THREE-PERCENT FEEDER LIST

17. Identify whether any feeders appear on the three-percent list more than once within a consecutive five-year period and any actions implemented to improve feeder performance.

See FPL's three-percent list in Appendix D and E and FPL's responses to Distribution Reliability Question Nos. 16 and 18 for actions that FPL has taken to address these feeders.

18. Process used to identify and select the actions to improve the performance of feeders on the three-percent feeder list, if any.

FPL evaluates feeder performance daily and has addressed feeders on this list through its "Frequency Feeder" program and one or more of its other reliability programs.

The objective of FPL's Frequency Feeder program is to reduce the number of customers experiencing multiple interruptions and multiple momentary interruptions by identifying and correcting feeders experiencing the highest number of events and/or customers interrupted. The initiative may strengthen feeders up to and including extreme wind loading standards for additional overall reliability improvement.

19. 2025 activities and budget levels directed at improving feeder performance.

See response to Distribution Reliability Item No. 16.

22. Discuss any 2025 projected activities and budget levels directed at improving regional reliability performance.

See FPL's response to Distribution Reliability Item No. 16. Each program listed addresses equipment and devices at the management area level.

OVERHEAD - UNDERGROUND RELIABILITY

23. Describe the five-year patterns/trends in reliability performance of underground systems vs. overhead systems.

The majority of FPL's customers are fed from circuits that are a hybrid of both overhead ("OH") and underground ("UG") systems. The methodology used to classify a customer as OH is defined as those customers served by a feeder with combined feeder and lateral OH miles greater than or equal to 95% of the total primary miles. Then, to classify a customer as UG, customers must be served by a feeder with combined feeder and lateral UG miles greater than or equal to 95% of the total primary miles. The balance of customers is classified as Hybrid. According to this methodology, FPL has 103 OH feeders, 637 UG feeders, with the remaining 3,170 feeders classified as hybrid. This methodology was applied for FPL's responses to Distribution Reliability Question Nos. 23 and 26.

The SAIDI performance of FPL's UG system has been better than its OH system, primarily driven by a better SAIFI. Also, the CAIDI associated with UG has generally performed better than OH due to FPL's looped UG system, which generally provides more opportunities for sectionalizing.

24. Describe Company efforts to separately track the reliability of overhead and underground systems.

FPL continually monitors each feeder interruption with a designation of either OH, UG,

or hybrid system. FPL analyzes the types of equipment that fail in order to determine the performance of its OH and UG systems. For example, FPL has equipment codes that relate specifically to its OH system (disconnect switches, insulators, jumpers, wire) and UG system (cable, switch cabinets, elbow, and terminators).

After significant storm events, if feasible, FPL performs forensic analyses/activities to compare OH vs. UG infrastructure performance.

25. Describe the process used by your company to identify and select the actions to promote underground distribution systems.

URD Tariff - FPL supports customer requests to convert OH facilities to UG or install new facilities UG. FPL's staff works to ensure timely and helpful responses to all inquiries for costs and requirements. In 2024, 6 municipalities signed undergrounding agreements and moved forward with 9 projects. FPL's Commission approved URD tariff provides incentives for new UG construction and OH to UG conversions for qualified projects.

Local Community Presentations - FPL conducts numerous presentations with local community groups who are interested in exploring OH to UG conversions.

Local Ordinances – There currently are local ordinances in multiple counties within FPL's service area that require new facilities to be installed as UG facilities. In addition, several municipalities require the customer to convert existing OH lines on or adjacent to their property when a major renovation is performed.

Distribution Lateral Hardening Program - FPL's commission approved Distribution Lateral Hardening Program as part of the SPP targets certain overhead laterals that were impacted by recent storms and have a history of vegetation-related outages and other reliability issues for conversion from OH to UG.

26. Provide Overhead and Underground Metrics

28. Describe Company efforts to correlate reliability-related complaints with reliability indices for applicable feeder, lateral, and sub region.

FPL responds to and addresses reliability complaints on a case-by-case basis. Lessons learned from issues and resolutions identified may be incorporated into our practices, if deemed appropriate. FPL also utilizes certain reliability programs, *e.g.*, Customer Impact and Frequency Feeders, to address customer complaints.

29. Describe the process used by your company to identify and select systemic actions to improve reliability due to customer complaints. If no such program exists explain why.

See response to Distribution Reliability Item No. 28.

Transmission Reliability

1. Reliability Adjustments Events (Transmission).

See Appendix G.

2. Localized Versus System-Wide Events.

No system-wide events.

3. Description of Reliability Programs.

The transmission and substation reliability initiative is a two-fold program. The first part consists of on-going assessments and inspections of the transmission and substation system conditions and the associated mitigation work as required. The second part consists of the following targeted reliability areas:

Animals – Program to prevent and mitigate the effects of animal-related events to the transmission and substation system. Animals include, but are not limited to, various birds, squirrels, and raccoons.

Equipment – Proactive replacement of both transmission and substation equipment reaching end of life. Items include, but are not limited to, insulators, overhead ground wires ("OHGW"), distribution breakers, transmission breakers, switches, and substation regulators.

Lightning – Items include bonding, grounding, and arrester installations.

Foreign Interference – Outreach and awareness safety program to minimize the impact of foreign interference (*e.g.*, cranes, balloons, diggers, sailboats, etc.) into electrical lines.

5. Description of Company's Tracking

FPL's Transmission/Substation group investigates all transmission and substation outages to identify the root cause(s) and develop solutions. Reliability performance is tracked using SAIDI, SAIFI, MAIFI, and MAIFIe.

6. Method of Program Selections

For program selection, FPL's Transmission/Substation group utilizes historical reliability performance, trends, condition assessments, and risk ranking.
